

Eggs-periment

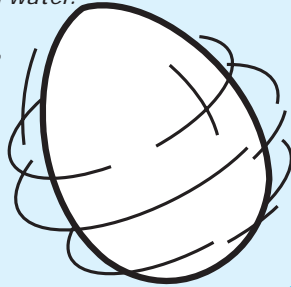

Fresh egg? How can you tell?

Place an egg in an empty glass, then fill the glass with water. Does the egg float? A fresh egg doesn't float because it contains very little air. The older the egg, the more air space it has. An egg that floats is too old to eat. *You will need a glass, an egg and water.*

Raw or cooked?

Spin two eggs (one raw, one boiled). See how they spin. A raw egg will wobble because the insides do not spin with the shell. Can you guess which egg is cooked and which egg is raw? *You will need one raw egg and one boiled egg.*

Barnyard Beat

Did you know that chickens lay colored eggs? Some are even shades of blue and green.

Did you know that the spots on a Holstein cow are like fingerprints, no two patterns are alike? So, every Holstein is unique.

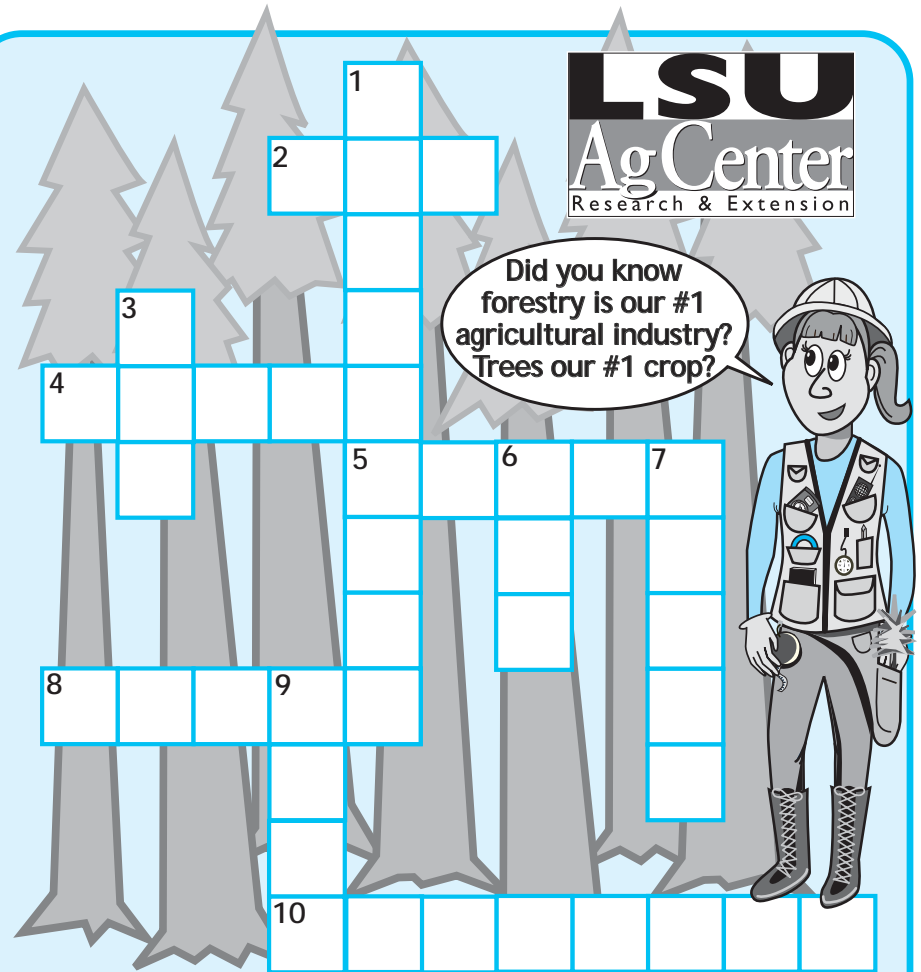

Did you know that pigs can get sunburned? That they will eat worms and snakes? And, that they are smarter than dogs?

Did you know that a sheep's wool resists flames, because wool fiber contains moisture?

Did you know that Louisiana is ranked 2nd in the nation in the production of sugarcane and sweet potatoes, 3rd in rice and 5th in cotton and pecans?

Special Thanks To Our Sponsors

Did you know forestry is our #1 agricultural industry? Trees our #1 crop?

Down

- Name for all farm animals raised for their milk, meat, work or wool.
