Agriculture: Backbone of Louisiana's Economy

This book gives an accounting of the value of agriculture in Louisiana in 2004. Agents and specialists of the Louisiana Cooperative Extension Service, as well as other agencies – both private and public – compile this information. It focuses on the animal, forestry, fisheries, plant and wildlife commodities that comprise our vital agricultural industry. This industry continues to contribute significantly to the state's economy with the potential for increased impacts through value-added processing.

In 2004, Louisiana farmers, foresters, fishermen and ranchers produced agricultural commodities valued at slightly more than \$5 billion. When those commodities were processed, the value-added brought in another \$5.7 billion, for a total contribution of more than \$10.7 billion. These values do not include authorized government payments.

Agriculture in Louisiana continues to be a major contributor to the state's economy. Many communities depend on agriculture, forestry, fisheries and wildlife for their livelihood. The heart of agronomic agriculture is found in northeastern and southwestern Louisiana. Forestry production is mostly in the hill parishes, and the fisheries production takes place mostly along the coast, although the aquaculture production of catfish is located mainly in the northeast Louisiana Delta.

Agriculture is more than a business to those who work in it day to day. It is truly a way of life. Families have lived on many of these farms for generations, and farming is a way of life they prefer even though it means hard work, many hours, high risks and sometimes low incomes.

As in any other industry heavily dependent on weather, agriculture has its good years and bad years. During the 2004 season, some commodity prices declined from record high prices and yields seen in 2003. Additionally, excessive rainfall in June followed by drought conditions later in the summer caused great concerns to many growers. Favorable growing conditions did, however, recover enough to allow for decent cotton and rice crops. Soybean, sugarcane and hay production, however, was affected negatively in many areas. Commodity prices continue to be a serious concern as input costs go up and Farm Bill programs are debated more and more by policymakers. Each year brings additional risks associated with commodity prices, trade agreements, higher input costs (fuel and fertilizer are at record high levels), as well as potential weather-related disasters. This makes the discovery and adoption of new agricultural technology developed by the LSU AgCenter more important than ever.

Agriculture produces the food and fiber commodities that are essential elements for life. Without the high productivity of agriculture, many would not have adequate food, clothing and lumber products needed to sustain their lives. Even with modern technology, many do not receive enough food to maintain their existence.

Agriculture is a highly sophisticated segment of the national and world economy and becomes increasingly more so each year. That is the reason the LSU Agricultural Center must continue to support agriculture and consumers with factual information provided by a well-trained faculty of Extension agents, specialists and campus/station-based scientists.

Those of us in the LSU Agricultural Center (Louisiana Cooperative Extension Service and the Louisiana Agricultural Experiment Station) are proud to be part of Louisiana's agricultural industry, and we look forward to continuing to serve that industry and the citizens across the state of Louisiana for years to come.

Sincerely,

Vice Chancellor, LSU Agricultural Center, and
Director, Louisiana Cooperative Extension Service

Louisiana Summary

AGRICULTURAL AND NATURAL RESOURCES

2004

The statistical information in this summary is compiled from estimates made by agents of the Louisiana Cooperative Extension Service after consulting with agricultural agency representatives, agricultural and agribusiness leaders and others and after study of various reports and resource materials.

Although this material is reasonably accurate and can be used for planning and other general information purposes, this is not the official document of agricultural data for the state. Official statistical data are gathered, summarized and published by the Louisiana Agricultural Statistics Service, P.O. Box 65038, Baton Rouge, LA 70896. Reproduction or publication of information in this summary should acknowledge the unofficial nature of the statistics.

A gross value has been computed for each commodity, which in some cases includes a value from natural resources and, consequently, does not represent income to farmers. The gross value is an indicator of the commodity's contribution to economic activity, but is not an indicator of farm profits. Production costs cut heavily into profit for many commodities. Even where there might have been an increase in gross income over previous years, there might have been a corresponding increase in the cost of production.

In the state summaries, the value added in marketing, processing and transportation is estimated in order to indicate the total contribution of agriculture and natural resources to the state's economy.

The state summary is not an exact summation of all parish reports. Some adjustments have been made, considering changes in average prices received, reports from statewide agricultural agencies and organizations and information from other sources.

In each parish table, only the commodities that were of economic value in that parish in 2004 are listed. Where the number of producers or the number of acres is omitted, that information was not available. An asterisk indicates that the number was so small that its inclusion might have revealed confidential information on individual producers.

Within some commodity groups, such as grains, fruits and commercial vegetables, the total number of producers has been omitted because some producers grow several different crops within the group. Adding together the producers of individual crops would not give a true total for the group.

Total farm income for all animal enterprises is \$1.634 billion for 2004, up from \$1.331 billion in 2003. Value added is \$949.0 million. Total value of all animal enterprises to the Louisiana economy is \$2.583 billion.

Beef Cattle

In 2004 the beef cattle industry saw continued high prices. The strong market encouraged producers to increase herd size and others to get into or back into beef production. Cattle numbers increased slightly to 642,972, up from 641,231 in 2003 and 632,887 in 2002, but still below the 651,126 in 2001. The number of producers fell to 12,446, down from 12,522 in 2003 but more than the 12,397 in 2002.

Gross farm income from beef cattle was \$365.6 million in 2004, up \$67.8 million from the \$295.8 million reported for 2003, and \$109.8 million from \$255.8 million in 2002, reflecting increased prices and numbers sold.

The number of steer calves in the 300-pound to 700-pound weight range sold was 260,258, down from the 265,284 head in 2003, but up from 255,759 head in 2002. The number of heifer calves of the same weight range sold was 224,201, almost equal to the 223,970 sold in 2003 and up from 206,342 head in 2002.

The gross farm value of the steer sales in 2004 was \$132.5 million, up \$21.1 million from 2003, which was \$111.4 million, and up from \$97.2 million in 2002. The value of the heifers sold in 2004 was \$106.1 million, up \$21 million from 2003, which was \$85.1 million, and a \$41.1 million increase from the \$70.3 million in 2002.

Sales of yearling cattle of both sexes were 63,516 head in 2004, down slightly from 66,968 head in 2003 and 65,145 head in 2002. The value of the yearling cattle sold was \$42.1 million, up from \$36.2 million in 2003 and \$31.1 million in 2001.

The number of cow-calf pairs sold increased to 48,794 in 2004, up from 44,409 pairs in 2003 and 41,415 pairs in 2002. Some producers are finding a niche market of developing cow-calf pairs to fill the need for other producers. The gross farm value of the pairs in 2004 was \$46.4 million, up from \$32 million in 2003 and \$29.4 million in 2002.

The number of cull cows sold fell to 73,419, down from the 74,284 head in 2003 and up from 71,548 head in 2002. This, coupled with the increase in cow-calf pairs sold, indicated continued herd improvement. The gross farm value of the cull cows in 2004 was \$30.1 million, up from the \$24.5 million in 2003 and \$21.9 million in 2002.

The number of cull bulls sold in 2004 was 9,171, up slightly from 9,091 in 2003 and 8,445 in 2002. The gross farm value of cull bulls in 2004 was \$8.4 million, up from \$6.6 million in 2003 and \$5.9 million 2002.

The increased farm value of beef cattle in 2004 over 2003 and 2002 was primarily a result of better prices.

The total value of the sales of the beef cattle industry in 2004 was \$365.6 million, up \$69.8 million from \$295.8 million in 2003; \$36.5 million of this was value added.

Dairy

Milk production was reported by 19 parishes in 2004. Three parishes in the southeastern part of the state and one in the northwest accounted for about 91% of the milk production, about 89% of the herds and 92% of the dairy cows in Louisiana. The number of dairy farms declined from 334 in 2003 to 308 in 2004. The number of milking cows decreased from 40,815 in 2003 to 36,768 in 2004. Total milk production decreased from 510.5 million pounds in 2003 to 469.7 million pounds in 2004. Even though total milk production was lower, the on-farm value of milk increased by \$11.1 million in 2004, going from \$66.3 million in 2003 to \$77.4 million in 2004. This significant increase in the on-farm value of milk was caused by a substantially higher average price received for milk in 2004.

The value of cull cows, bred heifers, mature cows, breeding age bulls and calves was about \$13.0 million. The total value of milk and animal sales to Louisiana dairy producers was \$90.4 million. The value added attributed to further processing milk and animal sales was about \$121.4 million. The total economic contribution from dairying in Louisiana, including milk sales, animal sales and further processing, was \$211.8 million.

The value of milk sales from dairy goats was \$3,986 in 2004, down from \$6,134 in 2003. Twelve producers with 126 milking does produced 18,120 pounds of goat milk.

The total on-farm value of the sale of milk from cows and goats and the sale of animals was \$90.4 million in 2004.

Horses

The race horse industry has 1,202 breeders who own 10,552 mares that produced 6,677 foals that were sold in 2004 for \$53.4 million. These breeders own 994 stallions that were bred to 9,504 mares, generating income from stud fees of \$19 million. The total income generated from race horse production was \$72.4 million. An additional 2,231 race horse owners owned 12,411 race horses in training or on the track at a value of \$124 million. The impact of race horse owners and breeders activities in 2004 was \$196.5 million.

The show and competition horse industry (horse shows, barrel racing, cutting, roping, team penning, etc.) has 2,536 breeders who own 8,026 mares that produced 5,271 foals that were sold for \$18.4 million. These breeders own 638 stallions which were bred to 5,600 mares, generating \$8.4 million in income from stud fees. The total income generated from show and competition horse production was \$26.8 million. Another 5,180 owners compete with 16,042 horses valued at \$64.1 million. The total impact of the show and competition horse industry is \$90.9 million.

A large portion of the horse industry is recreational. About 25% or 7,392 of the recreational horse owners bred 21,999 mares and sold 10,769 foals in 2004 for \$16.2 million. These horsemen own 1,089 stallions which were bred to 6,371 mares, generating income from stud fees of \$1.3 million. The total income from production in the recreational horse industry was \$17.4 million in 2004. Another 25,620 recreational horse owners have 60,658 horses valued at \$90.9 million. The total impact of the recreational horse industry is \$108.4 million.

The horse industry is an important economic stimulus for Louisiana. About 200,000 horses are owned by an estimated 60,000 people. Their average value is \$2,500, for a total value of \$500 million. The average horse owner spends about \$3,000 per year on feed, equipment, tack, veterinary supplies and medicines. This results in an estimated expenditure of \$600 million on horses and a total economic impact of about \$1.1 billion.

In addition to the value of horses produced and maintained in Louisiana, the activities of the horse industry generate a tremendous cash flow. The four racetracks employ 3,000 and generate expenditures of about \$1 billion per year. The show and competition industry conducts an estimated 500 activities and generates \$12.5 million in expenditures yearly. With the value of horses, expenditures on horses and the activities in which they engage, the impact of the horse industry is estimated at \$1.5 billion per year.

Poultry

Broilers and Eggs

Poultry production is the largest animal agricultural industry in Louisiana, second only to forestry in total income production for all agricultural commodities. Almost a billion pounds of broilers were produced in 2004. Their gross farm value was \$744.7 million. There were 405 broiler producers. Commercial broilers are produced in 12 parishes: Bienville, Claiborne, Jackson, Lincoln, Livingston, Natchitoches, Ouachita, Sabine, Union, Vernon, Webster and Winn.

There were 104 breeder flock producers in 2004. These breeder flocks produced 32.3 million dozen eggs with a gross farm value of \$12.3 million.

There were 992 edible egg producers in Louisiana in 2004. Table egg production decreased in 2004 to 13.3 million dozen eggs. The farm value for commercial egg production was \$11.2 million in 2004.

The gross farm value for all poultry production in Louisiana was nearly \$773.0 million in 2004.

Ratite and Other Exotic Fowl

The sale of ratites and exotic fowl generated \$750 in Louisiana in 2004. The decline in birds and values continued. There were 11 emu producers in 2004.

Quail and Pheasants

There were 37,837 birds produced in 2004. Quail and pheasants generated a gross farm value of \$75,674 in 2004.

Rabbits

The production of rabbits for meat and exhibition involved 413 producers in 2004. There were 241 fryer producers. This facet of the industry produced 118,857 pounds of meat. Louisiana rabbit producers generated \$103,264 in gross income.

Sheep and Goats

Fifty-seven parishes reported sheep and/or goat production in 2004. Sheep were produced by 521 producers and goats by 819. Breeding ewe numbers decreased slightly to 6,769 head; breeding doe numbers rose to 12,957 head.

St. Landry (1,200), Vermilion (979), Acadia (850), Calcasieu (750), Allen (350), St. Martin (350), Lafayette (325), Evangeline (243) and Iberia (240) reported the largest number of breeding ewes in production. Natchitoches (1,000), Calcasieu (750), Rapides (740), Beauregard (600), Richland (600), Ouachita (590), Livingston (575), Evangeline (428), Vernon (450), Tangipahoa (450), East Baton Rouge (400) and West Carroll (400) reported the largest number of breeding does in production.

Total number of lambs marketed (slaughter, feeder and club lambs) was 6,769 head. Stocker sheep sold numbered 920 head. Cull sheep sold were estimated at 1,781 head. Wool production was an estimated 36,142 pounds.

Total number of slaughter goats marketed was estimated at 9,645 head. Stocker goats numbered 3,576. Cull goats marketed numbered 2,295.

Gross farm value from sheep, wool and goats was estimated at \$2.82 million. Value added amounted to \$253,483. Total value of sheep, wool and goats was an estimated \$3.07 million.

Swine

The number of Louisiana pork producers fell to 467 in 2004 from 498 in 2003 and was about the same as 2002. The number of sows also declined from 3,894 in 2003 to 3,458 in 2004. There were 3,735 show pigs sold for \$1.2 million in 2004, up slightly from \$1.1 million in 2003. Feeder pig sales of 17,508 head sold for \$805,368 in 2004, up from 16,504 head in 2003. Slaughter hog sales at 23,908 head were down slightly from 24,866 in 2003. There were 2,554 head of cull animals sold. Gross farm value of sales of all classes of swine for 2004 was \$6.1 million, up from \$4.8 million in 2003 and \$5.3 million in 2002.

Exotic Animals

Exotic animal producers had gross farm sales of \$104,050 in 2004, up slightly from \$99,575 in 2003. Deer/antelope producers sold 800 animals worth \$100,000 while three llamas were sold for \$4,050.

Total farm value of all fish and wildlife enterprises is \$451.0 million for 2004. Value added is \$315.2 million. Total value of all fishery and wildlife enterprises to the Louisiana economy is \$766.2 million.

Aquaculture

Louisiana supports one of the most diverse aquaculture industries in the nation. While 2004 saw mixed results for various aquaculture commodities, the overall picture was somewhat down, with 9.4% and 19% decreases in acreage and farm-gate value, respectively, from 2003 totals. In spite of these downturns, the actual number of aquaculture producers increased by almost 12%. Louisiana's producers led the nation in crawfish, oyster, pet turtle and alligator sales, but not all sectors of production posted growth in 2004.

Louisiana crawfish acreage in the 2003-2004 season was down considerably (about 8.9%) from the previous season, but production (almost 70 million pounds) was down only 4.8%. The number of farm-raised alligators harvested was estimated at 278,445, an increase of roughly 16% in 2004, with farm gate values increasing similarly. Oyster production continued to be an important component of aquaculture in Louisiana. Although reported numbers of producers increased significantly for the second straight year, estimated production was down 38%. Pet turtle hatchling production continued to increase, with industry estimates of more than 13 million hatchlings produced. Problems with export markets in Asia, specifically China, resulted in low prices and many unsold hatchlings. Minnow culture for bait purposes appears to be growing again, particularly in coastal regions.

Catfish

In 2004 7,525 acres of farmed catfish were in production by 53 producers. More than 31.5 million pounds of catfish worth \$21.4 million were produced. Pond bank prices for farm-raised catfish rose sufficiently to result in a 10.9% increase in farm-gate value, in spite of reductions of 8.6% in the number of producers and 7% in overall yield. Louisiana's catfish acreage also decreased, by 16%.

Fisheries

The harvest of freshwater and marine fish and shellfish in Louisiana continue to be economically significant. Landings of the numerous species are recorded by two agencies. The Louisiana Department of Wildlife and Fisheries (LDWF) receives monthly reports from the initial buyers (processors, dealers, etc). Species, weight and dockside value of the landings are reported for all commercially harvested species. The National Marine Fisheries Service (NMFS) is responsible for estimating the landings of shrimp. This is done by local NMFS data collectors.

The freshwater fisheries and marine fisheries data are for 2003. The one-year lag is necessary for accuracy. Real-time reports on fisheries landings are not available until four months after the fact, and final statistics are often six to seven months behind. Estimating landings for the second half of the year based on landings reports from the first half is

inaccurate. This is the first year of this method of reporting fisheries landings data; therefore data should not be used on a comparative basis with those of previous years.

One final caveat is that close addition of the parish totals for fisheries landings will not equal the state total because of legal confidentiality requirements. When fewer than three sources in a parish report landings of a fisheries commodity in that parish, the number cannot be publicly released without disobeying confidentiality requirements.

Freshwater Fisheries

Freshwater finfish is comprised primarily of catfish, buffalo, gar, shad and freshwater drum and is typically less valuable on a per-pound basis than marine finfish. Total freshwater finfish landings declined by 13% by weight and 7% by value, although average price per pound increased by 6%. Catfish, the mainstay of the more valuable of freshwater species, contributed most to the landings' decline, with a 22% decline. Price per pound for catfish remained stable. Shad, a low-value bait species, typically landed in half the amount of catfish, also experienced a significant decline in landings. None of these shifts in finfish landings are beyond the range of ordinary. Except for gar, most species of freshwater finfish are underfished, and a minor change in demand can result in large upward and downward movement in landings annually.

Freshwater crawfish landings dropped 47% by volume and 40% by value. The price per pound increase of 12% did not make up for the drop in volume landed. Most wild crawfish are caught from the Atchafalaya Basin, which serves as a spillway for floodwaters of the Mississippi River. While wild crawfish compete in the marketplace with farm-raised crawfish, the wild product is preferred by many consumers because of its larger size. The volume of the wild crawfish harvest is almost completely constrained by the timing and duration of the annual floodwater event in the Atchafalaya Basin.

Marine Fisheries

Marine food finfish landings are varied and complex, with about 120 different species being landed. In 2003, the top 10 species landed by weight (in millions of lbs) were striped mullet (4.5), black drum (3.5), yellowfin tuna (3.0), red snapper (1.7), sheepshead (1.7), blacktip shark (1.2), vermilion snapper (1.1), king mackerel (0.9), swordfish (0.6) and greater amberjack (0.3). By value, the top 10 finfish species (in millions) were yellowfin tuna (\$8.9), red snapper (\$4.0), striped mullet (\$2.6), black drum (\$1.9), vermilion snapper (\$1.9), swordfish (\$1.2), king mackerel (\$1.0), sheepshead (\$0.4), bluefin tuna (\$0.4) and greater amberjack (\$0.3).

Total saltwater finfish landings increased by 12% in weight but decreased 4% in total value. Total landings of saltwater finfish increased by 2.1 million pounds, with striped mullet landings alone increasing by 2.0 million pounds over the previous year. Other species that showed significant increases in landings include black drum (13%), blacktip shark (56%), vermilion snapper (40%) and greater amberjack (23%). Those increased landings were balanced by decreased landings of several species, including yellowfin tuna (12%), red snapper (16%) and swordfish (13%). Price received per pound increased most for sheepshead (22%) and black drum (10%) and decreased most for blacktip shark (67%), greater amberjack (18%), striped mullet (13%) and king mackerel (10%).

Menhaden, a low-value, but high-volume non-food finfish species, decreased

in pounds landed by 13% and 17% in value. Price received declined from 3.7 cents per pound to 3.6 cents per pound. Menhaden oil and meal are sold on the world market, and the prices received for menhaden products is controlled by the world supply of oils and meals, particularly those produced by the fishery for the anchovetta of the Pacific Coast of South America.

In 2003, 61% of the oysters landed came from private aquaculture reefs and 39% from wild reefs. This fluctuates from year to year, with production from the two areas being roughly equal in 2002. Prices were essentially the same for oysters from the two sources. Total oyster harvest increased by 2%, total value increased by 11% and price per sack by 12%. Values used in these calculations were 7 pounds of shucked oyster meats per sack.

Blue crabs make up well over 99% of the Louisiana crab harvest, with stone crabs making up the remainder. Blue crab landings declined 2 million pounds (4%) from the previous year; however, total value of the harvest increased by \$4.9 million (10%). Price received per pound rose from \$0.61 to \$0.70 (15%). Louisiana crab landings normally fluctuate in the 40 million to 50 million pound range.

Shrimp landings are produced by six species — white shrimp, brown shrimp, seabobs, pink shrimp, rock shrimp and broken-neck shrimp. White shrimp provided 51% of the harvest by weight and 60% by value. Brown shrimp contributed another 47% of the total weight and 39% of the total value of the fishery. Prices received for white shrimp in 2003 averaged \$1.29 per pound. Brown shrimp averaged \$0.89 per pound. The overall average price for 2003 was \$1.08, an 18% decline from the 2002 average price of \$1.31. Because of massive shrimp imports, prices paid for domestic shrimp have declined since 2000 and are projected to continue to decline.

Fur

The 2003-2004 harvest of fur animal pelts had a gross farm value of \$745,590. This amount is represented totally by fur production and includes none of the value associated with meat production, predominantly from raccoon and nutria. Animals pelted and sold totaled 101,579. Nutria accounted for 76% of the pelts sold in the state, with the remaining fur production from muskrat, raccoon, mink, opossum, river otter, red fox, gray fox, bobcat, beaver and coyote. Nutria removals associated with the Coast-wide Nutria Control Program (CNCP) accounted for 332,596 animals being harvested. Included in this number are 254,924 nutria removed for the \$4 incentive payment only and not pelted. Nutria removals under CNCP, along with the gross dollar value of all other animals pelted and sold in Louisiana for the 2003-2004 trapping season, amounted to \$2,075,808. The CNCP program once again had a tremendous impact in increasing the total number of fur animals removed by increasing the nutria take in the coastal parishes.

The average gross farm value of all pelts, regardless of species was \$7.34 in 2003-2004, up from \$5.30 in 2002-2003. Pelt prices varied with lows of 50 cents for opossum to highs of \$86 for river otters. Value-added components raised the total value of furs sold in Louisiana during the 2003-2004 trapping season to \$915,584.

Honey

Honey production for 2004 was up from 2003 but slightly below average, creating problems for the industry. The season began with pricing about \$1.28 and dropped to \$0.65 with an average of about \$0.74. The total production was 2,875,834 pounds, for a return of \$2.1 million.

Wild honeybee populations continued to increase, and honeybee removal from walls and structures increased, allowing several beekeepers to expand their operations in bee removal. Pollination remains Louisiana's greatest asset, with more than \$400,000,000 in services to wildlife and agriculture, both commercial and homeowners. Colony leasing increased to help beekeepers with the drop in price. Most leasing is to vegetable and small fruit operations. There is increased interest in beekeeping for hobbyists. An increase in the local honey markets has helped beekeepers.

The small hive beetle continues to expand its area of infestation in Louisiana, and deregulation was initiated in March 2004. Improved management impedes losses from the mite infestations although losses do continue. The USDA-ARS Bee Breeding and Physiology Lab continues its release of new strains of the Russian honey bee queens to assist with mite management and honey production. The African honey bee continues to press the border in the northwest part of the state, but no swarms have been found in Louisiana yet.

Hunting Leases

The value of recreational hunting to the state is expressed through the income derived from hunting lease enterprises. The number of producers who leased land during the 2003-2004 hunting season was 7,155. This figure represents 1,797 individuals who operated waterfowl leases and 5,358 individuals operating upland game leases, predominantly for deer and turkey. Acreage leased were 1,612,681 for waterfowl and 6,372,437 for upland game.

Gross farm values were \$41,674,750 for waterfowl leases and \$35,048,404 for upland game leases. Average lease rates were \$5.50 per acre for upland game leases, \$15 per acre for waterfowl leases in coastal areas and \$50 per acre for waterfowl leases in other areas of the state. Leasing rates varied by location, habitat quality and species involved. Value-added components raised the economic impact of hunting leases to \$80.6 million.

The total value of all plant enterprises is \$2.950 billion. Value added is \$4.427 billion. Total value of all crop enterprises to the Louisiana economy is \$7.377 billion.

Cotton

In 2004, 1,514 cotton producers grew 491,299 acres of cotton, down from 1,716 producers growing 514,975 acres in 2003. There were 194,866 acres of irrigated cotton with a yield of 991.1 pounds of lint per acre in 2004; this was down from 217,328 acres yielding 1,081.3 pounds of lint in 2003 (a record year). The 2004 non-irrigated acreage of 296,433 acres was down slightly from 297,648 acres in 2003. The non-irrigated acreage yield of 787 pounds of lint was down from the 2003 yield of 931.7 pounds.

The 2004 growing season was characterized by extremely adverse conditions for cotton growth and development during the first half of the season and very favorable conditions during the latter part. Adverse conditions encountered early were caused mainly by excess rainfall and saturated fields that resulted in stunted, delayed growth and replanting in some situations. From July 15 through harvest, environmental conditions were almost ideal, resulting in excellent boll development and retention. Pressure from weeds was heavy early in the year; many producers could not make timely herbicide applications because of wet fields and frequent rainfall. Insect pressure from the bollworm/budworm complex was light, but control of stink bugs and plant bugs was difficult later because of fewer broad-spectrum insecticide applications and the continued emergence of those two pests in low spray environments. Producers were able to defoliate and harvest the 2004 crop on time despite the delay in maturity from adverse early-season conditions.

Feed Grains

In 2004, there were 487,047 acres of feed grains in Louisiana. Corn at 402,387 acres was the largest acreage, followed by grain sorghum at 79,277 acres and oats at 5,180 acres.

Corn

The corn was grown on 1,642 farms, down from 1,795 farms in 2003. Yields of 128.8 bushels per acre were down from 141.9 bushels per acre in 2003. Planting conditions in north Louisiana were close to optimal; most corn acreage is located there. Southern and central Louisiana experienced heavy rainfall that affected yields. Where plants were standing in water, ears were shorter and kernel setting irregular. The normal weed, disease and insect problems were experienced.

Grain Sorghum

Grain sorghum was produced on 608 farms growing 79,277 acres, with an average yield of 46.4 hundredweight per acre in 2004. The 2004 acreage and yield are down from the 155,258 acres yielding 57.2 hundredweight in 2003. Excessive rains marred the growing season. Johnsongrass problems developed in standing water. Insect problems were not unusual despite the weather, but uneven heading out did occur.

Oats

Oat production increased to 5,180 acres in 2004 from 2,923 acres in 2003. 2004 yields of 71.3 bushels per acres were close to the 2003 yields of 72.2 bushels.

Forestry

The projected Louisiana gross farm value of forest products increased substantially. The 2004 total sawlog harvest increased by almost 500 million board feet (36.44%) to a cut of 1,613,785,576 board feet. The estimated harvest of pine sawtimber increased by 36.44% to a total statewide harvest of 1,454,978,670 board feet. The hardwood sawtimber harvest increased to 158,806,906 board feet (a 36.43% increase) in 2004. Pine chip-n-saw harvested in 2004 totaled 1,478,988 cords, an increase of more than 59% from 2002 totals.

The estimated 2004 Louisiana pulpwood harvest was 6,995,793 cords, up 1,735,817 cords (28.33%) from 2003's harvest. Pine pulpwood harvest increased 30.39%, from 3,895,712 cords in 2003 to 5,291,690 cords in 2004. Hardwood pulpwood harvest increased by 339,839 cords (22.15%), from 1,364,274 cords in 2003 to 1,704,103 cords in 2004.

Stumpage prices for 2004 were mixed compared to 2003. On average around the state, pine sawtimber prices were 6% higher in 2004. Oak sawtimber prices were 4% lower on average in 2004. Statewide average pine pulpwood prices decreased by 13% in 2004, reversing a 19% increase observed in 2003. Hardwood pulpwood prices decreased an average of 22%, virtually eliminating a 23% gain seen in 2003. Chip-n-saw prices increased 15% on average in Louisiana in 2004.

With wood-using industries and commercial timber harvesting activities occurring in all parishes, forestry provides benefits to both urban and rural areas. In 2004, Louisiana's private forest landowners received an estimated \$796,415,421 from the sale of forest timber, up 39% from \$536,706,681 in 2003. Timber harvesting contractors and their employees earned \$565,514,541 from harvesting trees and moving wood to mills. This was up 30.04% from \$417,816,083 in 2003. This income is re-spent many times throughout the economy. In addition, Christmas tree growers received \$1.1 million from the sale of trees. Louisiana-produced pine straw sales made \$89,740 in 2004. Louisiana's private sector forest tree seedling nurseries produced a crop worth \$580,125.

The payroll and income derived from money generated by the forestry and wood products industry totaled an estimated \$5.3 billion in 2004, a 35.12% increase from 2003. The gross farm income produced by all forestry-related products, such as timber, pine straw and Christmas trees, was \$1,363,709,027 in 2004, up 35% from \$956,351,993 generated in 2003. The value added through further processing and delivery was \$3,913,844,908, up 35% from the 2003 value added of \$2,744,730,221. Total value (gross farm value plus value added) increased significantly in 2004, mainly because of much higher harvest volumes combined with slightly improved prices for pine sawtimber and chip-n-saw.

Fruit Crops

Blueberries

Blueberries were produced on 342 acres in 2004, an increase of 5% from 2003. Gross farm value increased in 2004 by 4% to \$1,095,419. The increase in gross farm value was caused mainly by the addition of 16 acres. The average blueberry yield was 2,564 pounds per acre, about a 1% decrease from 2003.

Citrus

Citrus were grown on 1,330 acres and have a farm value of \$6.3 million. Plaquemines Parish leads the state in citrus production, with 1,075 acres with a gross farm value of \$5.0 million. Louisiana citrus is sold on the wholesale markets and at fruit stands and roadside stands. Little change is expected in the citrus industry.

Mayhaws

Orchard mayhaw trees averaged 454 pounds per acre on 182 acres compared to 45 pounds per acre on 556 acres for native trees. Some of the orchard mayhaw acreage with older trees is starting to produce yields of more than 2,000 pounds per acre. Orchard mayhaws produced 82,452 pounds of fruit in 2004. This is a 2% increase over 2003. The larger size of the trees was the primary reason for the yield increase.

The native mayhaw crop was very light in 2004. Several collecting areas were closed or restricted harvesting. The gross farm value for mayhaws was \$148,593 in 2004.

Miscellaneous Fruit

Many miscellaneous fruits are planted as either small commercial plantings or as backyard plantings. These crops include blackberries, figs, grapes, pears, plums, apples and persimmons. They are planted on about 150 acres. Their estimated gross farm value is \$150,000.

Muscadines

Muscadine production reporting was divided into fresh fruit production and commercial production. Fresh fruit was produced on 54 acres. It was usually sold at \$6 to \$12 per gallon. The gross farm value of fresh fruit production was \$101,600. Production for juice and wine was considered commercial muscadine production. Commercial muscadines were grown on 18 acres and produced 95 tons for a gross farm value of \$30,400. The increased value of muscadines sold as fresh fruit increased the total gross farm value of muscadines to \$132,000.

Peaches

Peaches were grown on 516 acres in 2004, a decrease of 10% from 2003 peach acreage. Gross farm value in 2004 was \$2,221,980, a decrease of 5%. The decrease in farm value is primarily caused by a decrease in acreage. The yield per acre was 144 bushels, a 6% increase over 2003. The increase in per acre yield is probably the result of the removal of less productive trees. All areas of Louisiana received adequate chilling for recommended peach varieties. Excessive rain in May, June and July caused harvest and disease problems in some orchards.

Strawberries

The Louisiana strawberry industry has 93 producers who grow 405 acres of strawberries for a gross farm value of \$7.1 million. Tangipahoa is the leading parish with 48 producers growing 300 acres of strawberries for a gross farm value of \$5.4 million. Most Louisiana strawberries are marketed through peddlers; some go to wholesale outlets and the balance is sold at roadside stands and farmers markets.

Average yield in 2004 was near 2,000 flats per acre, an increase of 300 flats an acre from last year because of mild winters. Little change is expected in the strawberry industry.

Hay Sold

Hay production for commercial sales is a limited part of the total hay production in Louisiana. Nevertheless, hay produced from 100 acres of alfalfa and 243,854 acres of grasslands was sold by 2,933 producers in 2004. Yields averaged 3 tons per acre from the grasslands harvested for sale and 5 tons per acre from the alfalfa harvested for sale. Production included 694,436 tons of grass hay and 500 tons of alfalfa hay. The acreage and yield of grasslands used for commercial hay production were similar to values reported in 2003. Gross farm value was \$34.8 million, was about 4% lower than the 2003 crop value of \$36.3 million.

Hay for all uses was grown on 360,000 acres and produced 2.6 tons per acre, for a total production of 936,000 tons. This total production in 2004 was about 15% lower than in 2003. The total number of acres devoted to hay production fell by 20,000 acres from 2003 to 2004.

Home Vegetable Gardens

The 2004 gross farm value of home vegetable gardens in Louisiana was an estimated \$103,475,700. Parish reports indicated 344,919 home gardens statewide, reflecting that garden interest was down 12.7% from 2003. Every parish has home gardens; highest concentrations (almost 40% of total) are in the metropolitan areas of New Orleans, Baton Rouge and Shreveport.

Nursery Crops

Commercial nursery crop production had a gross farm gate value of \$115,806,625 in 2004. A small growth occurred overall in the industry. Fruit and nut crop producers numbered 53 and grew crops with a value of \$4,824,000. Floriculture and bedding plant producers numbered 181; crop value was \$28,433,125. Woody ornamentals were the largest segment of the nursery crop industry, with 472 producers producing an estimated farm gate value of \$74,351,250 in 2004. Foliage plants were grown by 143 producers and had a farm gate value of \$8,198,250. Available plant inventory at wholesale nurseries at the end of 2004 was lower than at the end of 2003. With a value added of \$59,061,379, the total wholesale value of the nursery production industry in 2004 was \$174,868,004.

Pecans

Louisiana harvested 7.8 million pounds of pecans in 2004, 6.6 million pounds below the 10-year average of 14.3 million pounds. This was composed of 3.4 million pounds of improved pecans and 4.4 million pounds of native pecans. The gross farm value was estimated at \$8,835,350, which is 58% of the gross farm value of pecans in 2003.

The 2003 pecan crop final USDA estimate for Louisiana was 20 million pounds. The 2004 pecan crop was down, in part because heavy rains in May reduced pollination. The crop was further diminished by heavy rains in June that increased disease problems. Warm wet weather also hampered harvest. The positive note was the very good prices Louisiana growers received because of hurricane damage to pecan crops in Georgia, Florida, Mississippi, Alabama and South Carolina. The size of the crop was enhanced by excellent prices that encouraged growers to be thorough in their harvesting. The good prices also encouraged a large harvest from yard trees. The yard harvest was very apparent in the Lafayette area, which had an excellent pecan crop.

Rice

Rice acreage in Louisiana increased nearly 80,000 from 455,081 acres in 2003 to 533,364 acres in 2004, mainly because of favorable commodity prices for rice at planting time. Acreage remains below the high figure of 640,000 in 1999, and it is expected to decrease by about 10% in 2005 because of low prices and a stagnant market despite low worldwide stocks-to-use ratio.

Average yield per acre was 5,841 pounds, nearly 320 pounds per acre lower than the record 6,157 in 2003. The primary factor in the lower yield was weather. Far too much rain with the accompanying cloud cover limited photosynthesis. Lower yields were offset by the dramatic increase in acres, resulting in a significant increase in total production to 31,152,773 hundredweight in 2004 or about 3.75 million hundredweight more than 2003.

The Louisiana crop was harvested by 1,496 producers, 75 fewer than in 2003. The number of rice farmers has declined steadily for more than a decade. The crop had a gross farm value of \$249,222,184, an increase of more than \$97 million. Higher prices at the beginning of the season led to a higher average market price and the increase in acreage combined to provide the dramatic increase in revenue despite the lower yield per acre. Value added in marketing, processing and transportation increased the value by \$74,766,655 for a total value of \$323,988,839.

Rice acreage in Louisiana is expected to decrease to around 500,000 acres next year. Acreage planted to rice will depend on the price at planting. Low prices will prevent production, and higher prices will stimulate planting.

Sod Production

In 2004, 24 sod farms (down 4 from 2003) cultivated 4,125 acres of fine turf grasses. Sod acreage was reported down 70 acres (1.7%). Gross farm sales were \$22,272,300. About 60% of the sod acreage in Louisiana is centipede grass. The remaining acreage is divided among St. Augustine, Bermudas and Zoysias, in that order. With new construction improving and Louisiana farms producing good quality sod, our sod markets continue to hold a better price. Markets are

expected to improve as construction increases. Shipping costs are expensive, so local sod is more competitive. Marketing is a limiting factor.

Soybeans

Soybeans were planted on 1,072,322 acres in 2004, with a yield of 32.9 bushels per acre. This yield was down from the record of 37.0 bushels per acre last year, but it almost equaled the old record of 33.0 bushels per acre set in 2001. This yield was attained even though 2004 had a difficult growing season because of weather. Many producers planted early to take advantage of August premium prices. This tactic was successful in 2004, but it may not have the same success each year. Statewide, producers faced the usual weed, disease and insect problems, but those in southern and central Louisiana had to deal with the red shouldered stink bug. Nearly 50,000 acres experienced "green bean" because of environmental conditions.

After the growing season was over, Asian soybean rust was discovered in Louisiana. This was the first spotting of this disease in the United States. Methods of dealing with this disease are under development for the 2005 growing season.

Sugarcane

In 2004, sugarcane was grown on 454,487 acres (a decrease of 26,199 acres or 5.5% when compared to the 2003 crop) by 718 growers (a decrease of 15 growers or 2.0%) in 24 parishes. An estimated 418,128 acres were harvested for sugar (assuming 8% of the total acres were used for seed cane purposes); with a total production of 1,202,234 short tons of sugar (a decrease of 218,495 short tons or 15.4%). Sugar produced per harvested acre was 5,751 pounds (a decrease of 10.5%), and sugar produced per total acre (including acres used for seed cane purposes) was 5,290.5 pounds (a decrease of 10.5%). The gross farm value of \$302,609,016 for sugar and molasses (a decrease of \$56,411,224 or 15.7%), as reported in the crop production statistics, is 60% of the value of the sugar and 50% of the value of the molasses produced, with the remaining percentage going to processing and marketing.

The total acreage reported of 454,487 acres for 2004 is the smallest area since the 1999 crop year when 463,000 acres were grown. Louisiana produced a record crop in 1999, with more than 1,675,000 tons of sugar (raw value) produced. Many growers were, undoubtedly, worried about marketing allotments and proportionate shares and chose to reduce their acres voluntarily. Further, many growers had to plough out unproductive fields in the spring of 2004 that were previously affected by harvesting equipment during the 2002 crop year because of the persistent wet weather. About 91% of the 2004 crop was planted to one variety, LCP 85-384, a new record for a single variety in modern history. Further, 47% of the 2004 crop was in second and older stubble that had been harvested during the 2002 harvest as plant-cane and first and older stubble. Even the first-stubble crop for 2004 was affected by the wet weather of 2002 because many growers were not able to plant all of their cane.

The 2004 crop year was one of contrast as well, with above-normal average rainfall and below-normal average temperatures in April and May and below-normal average rainfall in summer. This was followed by an unusually warm October and November with both temperatures and rainfall well above

normal. Excessive rainfall occurred with the passage of Tropical Storm Mathew just as the 2004 harvest season got under way, causing many factories to delay their start because of wet fields. Rainfall again caused wet field conditions at the end of November and most of December. For those growers who harvested before Tropical Storm Mathew, the yield of sugar per ton of cane was generally excellent, especially where the chemical ripener glyphosate had been used; however, for most growers, the excellent sugar yields were offset by extremely low field yields, especially in older stubble fields.

Because of the relatively mild winter, there was good early growth. Many growers began fertilizer programs earlier than normal. Excessive rainfall occurred in April and May. Water table remained high and the crop did not apparently respond well to added fertilizer. In several instances, growers fertilized a portion of their crops a second time because they felt much of the nitrogen fertilizer had been lost because of the excessive rainfall and high water table. Early growth measurements, however, were good in many areas. Then in June, little or no rainfall occurred for eight to 10 weeks or more. With the excessive early rain, most of the sugarcane roots could be found just under the surface of the soil. With the onset of the drought, sugarcane growth decreased dramatically.

During the grand growth phase, which normally occurs in June, July and August, it is not uncommon for sugarcane to grow at a rate exceeding an inch per day; however, because of the mid summer drought, there were instances in the western sugarcane area where the growth rate decreased to less than an inch per week. Further, it was noted that along with the earlier high rainfall and low temperatures, many fields, especially those fertilized early, were severely affected by rust that lasted well into the summer. Then with September rain and higher than normal temperatures in October and November, the cane returned to a vegetative state. Without glyphosate, this cane did not mature as expected with lower than anticipated yield of recoverable sugar per ton of cane throughout the harvest. The cane in many fields had a dark green appearance as if fertilizer had just been applied. In those fields with available nitrogen and with lodged cane, there were a great number of water suckers ('bull shoots') that contributed to low sugar yields late in the season.

Because of the low field yields, especially in older stubble, many growers reverted to harvesting by a whole-stalk machine in an effort to reduce cost of harvesting. In many instances, field yields did not improve significantly in the first-stubble or plant-cane crops. It appeared that LCP 85-384 did not perform very well across the state; however, it is known that LCP 85-384 does not perform well with a high water table nor does it yield to its potential in drought; however, field yields of HoCP 85-845, HoCP 91-555 and HoCP 96-540 appeared superior to those of LCP 85-384 when grown under similar conditions and crop year. Growers were likewise pleased with the appearance of the two new varieties, L 97-128 and Ho 95-988.

Sugar prices should be somewhat lower in 2004 when compared to 2003; molasses prices should be higher.

Sweet Potatoes

About 15,353 acres of sweet potatoes were planted in Louisiana in 2004, some 3,855 acres less than in 2003. Growers were not able to get the number of desired acres planted in May and June, the optimum planting time, because of

the wet soils from the excessive rains that occurred during these two months. About 2,000 acres did not get planted because they would have been planted in July; plantings made in July often result in lower yields. About 1,000 acres of sweet potato are grown just across the Arkansas state line. They are not counted as Louisiana acres, but the crops are sold by Louisiana producers. After the excessive rainfalls in May and June, drought conditions developed in South Louisiana, thus limiting yields. North Louisiana generally received adequate rainfall, but excessive rains occurred statewide in October and November, resulting in a loss of production. About 1,500 acres were not harvested. The average FOB price received for the 2004 crop was about \$11.20 for a 40-pound box. Processors paid an average of \$2 a bushel. The farm gate value of the 2004 crop is an estimated \$47,908,364. Value added is estimated at \$34,973,106, for a total economic value of \$82,881,470.

Vegetables

Commercial

The Louisiana vegetable industry involves 3,000 growers who produce more than 30 different crops on 9,135 crop acres for a gross farm value of \$36.2 million. There was little change in the vegetable industry from last year.

The leading parish in commercial vegetable is Tangipahoa, with a gross farm value of \$8.7 million. Plaquemines is second, with a gross farm value of \$7.9 million. The leading vegetable crop in the state is tomatoes, with a gross farm value of \$13.9 million followed by watermelons \$3.8 million, southern peas \$2.7 million, mustard \$2.6 million and okra \$2.0 million.

Most produce grown in the state is marketed by direct sales at farmers markets or roadside stands, providing a simple low-risk means of marketing where growers can obtain a premium price for their crops.

Little change is expected in the commercial vegetable industry in Louisiana.

Greenhouse

In 2004, 24 parishes had farms producing greenhouse vegetables on 6.3 acres (unchanged) of greenhouse space. Acreage was also similar to 2002 estimates. All production was devoted to tomatoes. Distribution of the industry was statewide, and sales were to local markets. All greenhouse produce was for fresh market sales, and much was sold direct retail by growers. Estimated gross farm value of Louisiana greenhouse vegetables is \$1,972,785. A significant expansion (18%) of this industry occurred in 1997 because of its promotion by the LSU AgCenter. Little expansion is expected.

Wheat

Wheat was harvested from 159,379 acres by 610 producers in 2004, an increase from the 128,263 acres harvested in 2003. Yields averaged 51 bushels per acre, which was higher than the average yield of 47 bushels per acre harvested in 2003. Total production was 8,135,580 bushels, up considerably from the 6,064,323 bushels harvested in 2003. The gross farm value of the 2004 crop was valued at \$26.4 million, up substantially from the 2003 crop valued at \$19.5 million.

2004 PROGRESS REPORT

Animal Commodities

Commodity	Gross Farm Value	Value Added	Total Value
Beef Cattle and Calves	365,614,430	40,217,587	405,832,017
Dairy	90,385,880	121,413,044	211,798,924
Horses	395,965,200	43,556,172	439,521,372
Poultry	772,955,383	742,037,168	1,514,992,551
Rabbits	103,264	9,810	113,074
Ostrich/Ratite	750	—	750
Quail/Pheasant	75,674	—	75,674
Sheep	1,058,515	95,266	1,153,781
Goats	1,757,970	158,217	1,916,187
Swine	6,053,614	1,513,404	7,567,018
Exotic Animals	104,050	—	104,050
Total - Animal	\$1,634,074,729	\$949,000,668	\$2,583,075,397

Fisheries and Wildlife Commodities

Commodity	Gross Farm Value	Value Added	Total Value
Aquaculture	128,582,525	83,578,641	212,161,166
Freshwater Fisheries	8,470,471	7,199,900	15,670,371

** The marine, freshwater and oyster data presented here are for the year 2003 rather than 2004. Release of fisheries landings data by the collecting agencies occurs 4-5 months after the fact. Another reporting system was used in previous years, so this year's data are not directly comparable to that of previous years.

** The marine, freshwater and oyster data presented here are for the year 2003 rather than 2004. Release of fisheries landings data by the collecting agencies occurs 4-5 months after the fact. Another reporting system was used in previous years, so this year's data are not directly comparable to that of previous years.

** The marine, freshwater and oyster data presented here are for the year 2003 rather than 2004. Release of fisheries landings data by the collecting agencies occurs 4-5 months after the fact. Another reporting system was used in previous years, so this year's data are not directly comparable to that of previous years.

*** The marine, freshwater and oyster data presented here are for the year 2003 rather than 2004. Release of fisheries landings data by the collecting agencies occurs 4-5 months after the fact. Another reporting system was used in previous years, so this year's data are not directly comparable to that of previous years.*

** The marine, freshwater and oyster data presented here are for the year 2003 rather than 2004. Release of fisheries landings data by the collecting agencies occurs 4-5 months after the fact. Another reporting system was used in previous years, so this year's data are not directly comparable to that of previous years.

** The marine, freshwater and oyster data presented here are for the year 2003 rather than 2004. Release of fisheries landings data by the collecting agencies occurs 4-5 months after the fact. Another reporting system was used in previous years, so this year's data are not directly comparable to that of previous years.

** The marine, freshwater and oyster data presented here are for the year 2003 rather than 2004. Release of fisheries landings data by the collecting agencies occurs 4-5 months after the fact. Another reporting system was used in previous years, so this year's data are not directly comparable to that of previous years.

PRICES OF COMMODITY PRODUCTS

The gross farm value of the commodities reported in the parish tables was computed based upon estimated annual per-unit prices. The state average prices listed below were used for most parishes for most commodities. However, a parish price was used if the parish price was significantly different from the state price.
