## *Agriculture: Backbone of Louisiana's Economy*

This publication tabulates the value of Louisiana agriculture in 2008. Agents and specialists of the Louisiana Cooperative Extension Service, as well as other agencies – both private and public – compiled the data. Their analysis focuses on the animal, forestry, fisheries, plant and wildlife commodities that comprise our vital agricultural industry. The agricultural industry continues to contribute significantly to the state's economy with the potential for increased benefits through value-added processing.

The 2008 production year for the food and fiber sector of the state started with as much optimism as has been experienced in several years. Two years removed from hurricanes Katrina and Rita, agricultural production in the state had essentially completed its long road to recovery from the immediate and lingering effects of the storms. Strong domestic and international demand for many agricultural commodities, the growing interest in biofuel production and increased activity of speculative buyers in agriculture futures markets all helped to create significantly higher prices for many agricultural commodities.

This optimism was fairly short-lived as sharp increases in many input prices quickly eroded projected profit margins for producers. Although this was felt throughout the agricultural and forestry industries, the impact was greater for commodities whose price increases failed to keep pace with increasing production costs. And just as the projected financial situation of agricultural producers became more precarious so, too, did the production environment.

While less-than-ideal weather conditions in the early part of 2008 created difficulty for some agricultural commodities, none were spared with the arrivals of hurricanes Gustav and Ike. These two hurricanes made landfall in Louisiana within one month of each other. Extreme rainfall associated with Hurricane Gustav inundated the agricultural sector. The tidal surge from Hurricane Ike, like that experienced during hurricanes Katrina and Rita, also had negative effects on agricultural production in 2008. Similarly, the aftermath of Hurricane Ike is expected to last for years – increasing salinity levels in soils and irrigation systems. Cotton, sweet potatoes, soybeans and pecan production bore the brunt of the storm, as a percentage of their average farm-gate values. For crops like rice and sugarcane, the effects of high salt levels on production and farm returns will not be fully realized until for the next few years.

What little optimism remained after record input costs and devastation from two major hurricanes was further tested by sharply lower commodity prices at the end of 2008. Although commodity prices reached record levels in the first half of 2008, growing concerns about general economic conditions and its implication for consumption and investment patterns, domestically and internationally, put tremendous downward pressure on commodity prices.

Although the agricultural sector certainly encountered many challenges in 2008, it was able to generate farm-gate sales totaling \$5.3 billion. When those commodities

were cleaned, processed and packaged, the value-added brought in nearly \$4.1 billion, for a total contribution to our state's economy of nearly \$9.5 billion. Although farm-gate values and levels for value added for specific commodities may have changed noticeably from last year because of lower output caused by the hurricanes, lower commodity prices or significant changes in acreages, the food and fiber sector continues to be vital to the state's economy. Cutting-edge research and extension education and outreach efforts remain critical to sustaining these significant economic benefits.

Many communities depend on agriculture, forestry, fisheries and wildlife for local jobs and their economic well-being. The heart of agronomic agriculture is found in northeastern, southwestern and south central Louisiana. Forestry production is mostly in the hill parishes, and the fisheries production takes place mostly along the coast, although the aquaculture production of catfish is located mainly in the northeast Louisiana Delta.

Agriculture, forestry and fisheries are more than a business to those who work in it day-to-day. It truly is a way of life. Families have lived on many of these farms, forest lands or in fishing villages for generations following a preferred way of life even though it means hard work, many hours, high risks and sometimes low incomes.

With the expansion of the biofuel industry, commodity prices have improved for certain commodities. However, as input costs continue to be at historical levels, however, prices received by producers will continue to be a serious concern. Each new production season has risks associated with commodity prices, trade agreements and higher input costs, as well as uncertainty related to the weather. These conditions make the discovery and adoption of new agricultural technology developed by the LSU AgCenter more important than ever to our state's producers.

Agriculture is a highly sophisticated segment of the national and world economy, becoming increasingly moreso every year. That is the reason we at the LSU Agricultural Center continue to support agriculture and consumers with factual information provided by a well-trained faculty of extension agents, specialists and campus/station-based research scientists.

Those of us in the LSU Agricultural Center (the Louisiana Cooperative Extension Service and the Louisiana Agricultural Experiment Station) are proud to be part of Louisiana's agricultural industry, and we will continue to serve that industry and the citizens across the state of Louisiana for years to come.

Sincerely,

A handwritten signature in black ink, appearing to read "Paul Crain". The signature is written in a cursive, flowing style.

Vice Chancellor, LSU AgCenter, and  
Director, Louisiana Cooperative Extension Service

# Louisiana Summary

## Agriculture and Natural Resources

### 2008

The statistical information in this summary is compiled from estimates made by extension agents of the LSU AgCenter after consulting with agricultural agency representatives, agricultural and agribusiness leaders and others and after study of various reports and resource materials. State specialists check parish-level data for specific commodities to ensure accuracy and consistency of production information. Any inquiries about the data in this publication should be directed to Dr. John Westra in the Department of Agricultural Economics, LSU AgCenter, who oversees the process of gathering all information for the Louisiana Summary.

Although this material is reasonably accurate and can be used for planning and other general information purposes, this is not the official document of agricultural data for the state. Official statistical data are gathered, summarized and published by the USDA – National Agricultural Statistics Service, Louisiana Field Office, P.O. Box 65038, Baton Rouge, LA 70896. Reproduction or publication of information in this summary should acknowledge the unofficial nature of the statistics.

A gross value has been computed for each commodity, which in some cases includes a value from natural resources and, consequently, may not represent income to farmers. Gross farm values were calculated using calendar-year, market-weighted, state-level average prices, when available. The gross value is an indicator of the commodity's contribution to economic activity in the state, but is not an indicator of farm profits. Production costs greatly affect profit for many commodities. Even when gross income increases over previous years, corresponding increases in production costs may decrease farm profits.

In the state summaries, the value added in cleaning, processing, packaging, marketing and transporting commodities is an estimate of the total contribution of agriculture and natural resources to the state's economy.

The state summary is not an exact summation of all parish reports since adjustments may occur because of changes in average prices received, or to accommodate information from other sources.

In each parish table only commodities that were of economic value in that parish this year were listed. In some instances, the number of producers or the number of acres in a parish were not available. An asterisk is used to avoid confidential information from being released when too few producers are present for that commodity. Within some commodity groups, such as grains, fruits and commercial vegetables, the total number of producers has been omitted because some producers grow several different crops within the group. Adding together the producers of individual crops would not give a true total for the group.

## Animal Enterprises

Total farm income for all animal enterprises was \$1.537 billion for 2008, down 17% from \$1.844 billion in 2007. Value added was \$0.779 billion. Total value of all animal enterprises to the Louisiana economy was \$2.316 billion, down from \$2.904 in 2007.

### Beef Cattle

In 2008, the beef cattle industry began with fears of lowered calf prices due to perceived expansion along with increasing input costs. As the year progressed, however, beef cow numbers were slightly lower nationally and prices were down 10% or more in most classes from 2007 levels. The driving factors in the beef cattle sector were significantly higher feed costs and lower sale prices throughout the year. Production costs had increased steadily through the fall, but feed prices appear to have fallen in late 2008, so that producers may be cautiously optimistic in 2009.

Cow numbers are back to pre-hurricane figures totaling 615,782 with a reported 12,117 producers. Gross farm income from beef cattle declined from \$356.3 million in 2007 to \$343.3 million in 2008.

The gross farm value of the steer sales in 2008 is \$121.1 million; lower than the \$138.1 million reported in 2007. Gross farm values of heifer sales also declined by \$12.0 million from \$109.9 million in 2007 to \$97.9 million in 2008.

The number of cow-calf pairs sold in 2008 rebounded to 55,480 pairs sold for a value of \$54.1 million, similar to the 2006 levels and significantly higher than 2007 levels of 39,795 pairs sold for \$38.4 million. Yearling cattle sold for \$38.0 million in 2008. Gross farm value of cull cows and bulls was \$25.1 million and \$7.0 million, respectively.

The total value of the beef cattle industry in 2008 was \$381.1 million of which \$37.8 million was value added and \$343.3 was farmgate value.

### Dairy

Milk production was reported by 15 parishes in 2008. Three parishes in the southeastern part of the state and one parish in the northwestern part accounted for more than 93% of the milk production, about 91% of the herds and 93% of the dairy cows. The number of dairy farms declined from 204 in 2007 to 186 in 2008. The number of milking cows decreased from 25,133 head in 2007 to 23,218 head in 2008. Total milk production decreased from 345.9 million pounds in 2007 to 316.1 million pounds in 2008. The on-farm value of milk decreased from \$71.6 million in 2007 to \$65.4 million in 2008. The decrease in the on-farm value of milk in 2008 was due primarily to a loss in number of cows and to a lesser extent a slight loss in production per cow; average milk production per head was 13,600 hundredweight in 2008. The average price of milk per hundredweight for the Southeast region was \$20.70 in both years. Even though milk prices were high in 2008, profit margins were low due to unprecedented increases

in feed costs as well as for fertilizer and fuel during the first half of the year.

The value of milk sales from dairy goats in 2008 was \$3,400 in 2008, up from \$2,058 in 2007. The total number of producers increased from 17 last year to 18 in 2008. The 306 milk goats produced 9,561 pounds of milk in 2008, an increase over 2007 production of 8,230 pounds.

The value of cull cows, bred heifers, mature cows, breeding age bulls and calves was \$9.3 million. The total value of milk and animal sales to Louisiana dairy producers was \$74.7 million. Value added contributed \$105.3 million more. The total economic contribution from dairying in Louisiana, including milk sales, animal sales and additional processing was \$180.0 million.

## Horses

The horse industry is an important economic stimulus for Louisiana. Approximately 207,540 horses are owned by an estimated 47,929 people in 2008, down slightly from 2007. The industry is composed of approximately 10% racing, 20% show or competition and 70% recreational horse owners.

The race horse industry is composed of 1,408 breeders who own 13,812 mares that produced 9,022 foals that were sold in 2008 for \$72.2 million. These breeders own 1,200 stallions that were bred to 14,632 mares, generating income from stud fees of \$36.6 million. The total income generated from race horse production was \$108.8 million.

An additional 2,373 race horse owners owned 14,164 race horses in training or on the track at a value of \$170.0 million. The impact of race horse owners and breeders activities in 2008 was \$278.8 million.

The show and competition horse industry (horse shows, barrel racing, cutting, roping, team penning, etc) is composed of 2,919 breeders who own 9,210 mares that produced 6,110 foals that were sold for \$24.4 million. These breeders own 1,266 stallions that bred to 5,727 mares, generating \$8.6 million in income from stud fees. The total income generated from show and competition horse production was \$33.0 million. Another 4,818 owners compete on their 14,911 horses that are valued at \$74.6 million. The total impact of the show and competition horse industry is \$107.6 million.

A large portion of the horse industry is recreational. The horse is used for comfort, exercise and enjoyment. Approximately 20% or 10,326 of the recreational horse owners bred 25,765 mares and sold 14,150 foals in 2008 for \$21.2 million. These horsemen own 2,577 stallions that were bred to 9,138 mares generating income from stud fees of \$4.7 million. The total income from production in the recreational horse industry was \$25.9 million in 2008. Another 26,085 recreational horse owners have 65,856 horses valued at \$98.8 million. The total impact of the recreational horse industry is \$124.6 million.

A total of 207,540 horses owned by 47,929 horsemen had a value of \$510.9 million in 2008. The average horse owner spends about \$4,000 per year on feed, tack, equipment, veterinary supplies and medicines. This results in an estimated expenditure of \$830 million on horses and a total economic impact of \$1.34 billion.

In addition to the value of horses produced and maintained in Louisiana, the activities of the horse industry generate a tremendous cash flow for the state. The four racetracks employ 3,000 people and generate expenditures of approximately \$1 billion each year. The show and competition industry conducts an estimated 500 activities per year and generates \$20.5 million in expenditures. With the value of horses, expenditures on horses and the activities in which they engage, the impact of the horse industry is estimated at \$2.4 billion per year. This value coincides with a recent study by the American Horse Council that estimated the Louisiana horse industry generated \$2.45 billion per year in economic impact.

## **Poultry**

### ***Broilers and Eggs***

Poultry production continues to be the largest animal agricultural industry in Louisiana and is second only to forestry in total income production for all agricultural commodities. In 2008, Louisiana growers produced 1.02 billion pounds of broiler meat. The gross farm value of these broilers, from 460 producers, was \$481.1 million in 2008. Commercial broilers are produced in 11 parishes including Bienville, Claiborne, Jackson, Lincoln, Natchitoches, Ouachita, Sabine, Union, Vernon, Webster and Winn.

Breeder flock producers numbered 119 in 2008. These breeder flocks produced 35.3 million dozen eggs with a gross farm value of \$77.6 million. Also, there were 36 pullet producers that produced 1.4 million pullets with a farm value of \$14.4 million.

Commercial and small edible egg producers in Louisiana numbered 671 in 2008. Table egg production was 21.9 million dozen eggs. The farm value for commercial egg production was \$27.4 million in 2008.

The gross farm value for all poultry production in Louisiana was \$603.4 million in 2008. The value added from poultry production to the Louisiana economy was estimated to be \$579.3 million last year. The total value of poultry production in Louisiana was \$1.2 billion in 2008.

### ***Ratite and Other Exotic Fowl***

The sale of ratites and exotic fowl did not generate any funds in Louisiana in 2008. The decline in birds and values continued.

### ***Quail***

In 2008, 28 producers raised 20,953 birds. Quail generated a gross farm value of \$73,335 in 2008, with value added of \$3,667, for a total value of \$77,002.

## **Rabbits**

The production of rabbits for meat and exhibition involved 386 producers in 2008. The fryer industry produced 88,546 pounds of meat. Louisiana rabbit producers generated \$100,087 in gross income. With value added of \$9,508, the total value of rabbit production in 2008 was \$109,596.

## Sheep and Goats

Fifty-six parishes reported sheep or goat production in 2008. Sheep were produced by 405 producers, a slight decrease from 2007, while 1,170 producers raised goats, a slight increase from 2007.

Total number of lambs marketed (slaughter, feeder and club/show lambs) was estimated to be 4,622 for \$0.66 million in 2008, down slightly from 2007. Stocker sheep sold numbered 518 head, up slightly from 2007. Cull sheep sold were estimated at 1,602 head, also up from 2007. Wool production was estimated at 26,650 pounds, down slightly from 2007. Total farmgate value of sheep sales was \$0.74 million in 2008, and total value was \$0.81 million when value added contributions were included. This was down 11% from 2007.

Goats were produced by 1,170 farmers in Louisiana in 2008. Total number of slaughter goats marketed was estimated to be 9,921 head, up from 2007. Stocker goats sold numbered 3,972 head in 2008, a slight decrease from 2007. Cull goats marketed this year numbered 2,882. Goats sold as club/show goats numbered 2,519 head, a slight increase over 2007. Gross farm value of goats sold in Louisiana in 2008 was \$2.0 million, down 17% from 2007. Total value of production was \$2.2 million, when value added contributions were included.

## Swine

Louisiana pork producers numbered 367 in 2008 compared to 407 in 2007. St. Martin (65), Rapides (30), Calcasieu (30), Vermilion (29), Richland (20) and West Feliciana (20) parishes reported the largest numbers of producers. The number of sows reported in 2008 was 2,566, down from 3,144 in 2007. Show pigs, totaling 2,700 sold for \$0.68 million, down from the previous year. Feeder pig sales of 10,971 head had a gross farm value of \$0.17 million in 2008, down substantially from the previous year. Slaughter hog sales in 2008 at 6,363, with a farmgate value of \$0.79 million, were down from 2007 levels. There were 1,174 cull animals (sows and boars) sold in 2008, valued at \$0.14 million. The gross farm sale of all classes of swine in 2008 was \$1.8 million. The estimated value added from the swine sector was \$0.4 million in 2008, so when added to gross farm sales, the total value of all swine production in the state was \$2.2 million in 2008.

## Exotic Animals

Exotic animal producers had gross farm sales of \$0.16 million in 2008, up substantially from \$0.09 million 2007. Total value of production for exotic animals, including value added, was \$0.17 million in 2008.

# Fisheries and Wildlife Enterprises

Total farm value of all fish and wildlife enterprises was \$561.6 million in 2008, up 16% from \$482.7 million in 2007. Value added was \$381.1 million. Total value of all fishery and wildlife enterprises to the Louisiana economy was \$942.7 million in 2008.

## Aquaculture

Louisiana is nationally renowned for supporting one of the most diverse aquaculture industries in the United States, including species and products such as crawfish, catfish, alligators, oysters, tilapia, baitfish, hybrid striped bass, soft shell crawfish and crabs, ornamental fish, baby turtles, a variety of freshwater game fish and other minor species. Louisiana's producers continue to lead the nation in crawfish, oyster, pet turtle and alligator sales, and new species such as saltwater baitfish and cultured corals are being evaluated commercially. Louisiana's aquaculture crops exhibited mixed results during 2008. Gross farm sales, however, reached \$215.9 million, up 26% from 2007. Value added to aquaculture was estimated to be more than \$140.3 million, resulting in a total value of \$356.2 million for the aquaculture sector of the state's economy.

Estimates from the field indicate that farmed crawfish production occupied more than 184,000 acres during the 2007-2008 crawfishing season, up slightly from the previous year. The estimated number of producers in 2008 was down slightly from a year ago, although this does not reflect the total number of people making an income from crawfish farming operations. Estimated average yields per pond acre (608 pounds) were lower over most of the crawfish-producing areas of the state, likely reflecting higher harvesting costs and reduced crawfish prices later in the season. This caused fishing effort to decline along with season-average yields. According to estimates from the various crawfish producing parishes, nearly 112 million pounds of farm-raised crawfish were sold for \$121.3 million in the 2007-2008 season, making farm-raised crawfish the state's most valuable aquaculture commodity.

Despite continuing declines in acreage, Louisiana still ranks fourth among catfish-producing states. Declines in catfish acreage and production appeared to have continued and accelerated throughout the major producing states in 2008, not only in Louisiana. Louisiana catfish acreage decreased by 8% to 4,428 acres of ponds, but producers sold nearly 20 million pounds of catfish valued at \$15.3 million. Downward pressure on prices, combined with significantly increasing input costs for feed and fuel caused even more significant declines in 2008 catfish acreage in neighboring states (11% in Mississippi and 20% in Arkansas).

Following several years of impressive growth in the number of farmed alligators produced, industry expansion has continued at a slower pace because of lingering hurricane impacts on nesting habitats. Nonetheless, the value of farmed alligator production increased by more than 10% from 2007 to \$33.4 million in farm gate value in 2008. Pet turtle hatchling production was steady in 2008, with production of 10.2 million hatchlings. Estimated hatchling sales exceeded \$6.1 million this year. Louisiana's

bait fish and minnow industries rebounded significantly from last year and had combined sales of \$2.5 million in 2008. Some producers successfully converted catfish production to bait production in an attempt to remain profitable.

Hurricanes devastated much of Louisiana's oyster fleet, infrastructure and markets in late 2005. Throughout the following years the industry has struggled to re-organize and return to production. Sales figures for this summary were \$35.5 million, near pre-hurricane levels. An additional \$2.2 million in out-of-state landings occurred, but are not included in the state total for oysters listed in this summary. The oyster aquaculture figures reported in this summary represent a one-year lag (figures for oysters reported this year are from 2007). The reason for the lag is that data for oyster sales are compiled and provided by the Louisiana Department of Wildlife and Fisheries (LDWF) to the National Marine Fisheries Service (NMFS) and these data are not available until the middle of the following year. So, to avoid estimation and projection errors from using only data from part of the year, we use final estimates from LDWF and NMFS from the previous year.

## Fisheries

The harvest of freshwater and marine fish and shellfish in Louisiana continues to contribute significantly to the state's economy. Fisheries landings are recorded by two government agencies. The Louisiana Department of Wildlife and Fisheries (LDWF) receives monthly reports from the initial buyers (processors, dealers, etc), who are required to record every transaction. Species, weight and dockside sales value of the landings are reported for all commercially harvested species.

The National Marine Fisheries Service (NMFS) is also responsible for estimating fisheries landings, using both regional NMFS data collectors and LDWF reports. The data reported here are from those two cooperating sources.

The freshwater fisheries and marine fisheries data reflect the calendar-year 2007. The one-year lag is necessary to ensure data accuracy. Real-time reports on fisheries landings are not available until four months after the fact, and final statistics are often six to seven months behind. Estimating landings for the second half of the year based on landings reports from the first half is inaccurate. This method of reporting fisheries landings data has been in place since the 2004 Louisiana Summary; data prior to that volume may not be directly comparable to those reported since 2004 as a different estimation method was used.

One final caveat is that parish totals for fisheries landings will not equal the state total because of legal confidentiality requirements. When there are fewer than three sources in a parish that report landings of a fisheries commodity in that parish, the number of landings cannot be publicly released by LDWF or NMFS without breaking confidentiality requirements. So, there may be parishes reported in this volume for which no landings or values were provided by LDWF or NMFS, but for which there was catch. Furthermore, fisheries landings are reported for the parish in which the fish are offloaded; not the parish in which the boat and its crew may be domiciled or the parish where the catches actually were made.

## **Freshwater Fisheries**

Freshwater finfish is primarily composed of bowfin, catfish, buffalo, shad, gar and carp and is typically less valuable on a per-pound basis than marine finfish. Total freshwater finfish landings in 2007 decreased in value by 9% from 2006 levels to \$4.9 million on 11.6 million pounds sold.

Catfish are the mainstay of the more valuable freshwater species, and price per pound for catfish remained relatively stable. Sales of catfish caught commercially in Louisiana waters was \$2.4 million in 2007.

Most wild crawfish are caught in the Atchafalaya Basin, where water levels fluctuate as inflows are controlled at about one-third of the combined flows of the Mississippi and Red rivers. Although wild crawfish compete in the marketplace with farm-raised crawfish, some consumers prefer the wild product because of its frequently larger size. The volume of the wild crawfish harvest is almost completely constrained by the timing and duration of the annual winter/spring floodwater event in the Atchafalaya Basin. 2007 saw a long crawfish season in the Atchafalaya Basin from prolonged floodwaters. As a result, freshwater crawfish landings were 14.9 million pounds in 2007, up substantially from 1.5 million pounds in 2006 and near the 2005 level of 15.2 million pounds. Wild crawfish sales were \$8.5 million in 2007, compared to a dockside value of \$1.3 million the previous year.

## **Marine Fisheries**

Marine food finfish landings are varied and complex, with about 80 different species being landed for 9.6 million pounds. In 2007, the top five species landed by value were yellowfin tuna, red snapper, black drum, king mackerel and swordfish. Yellowfin tuna landings in 2007 alone were worth \$7.9 million, down from the record of \$18.8 million in 1988. Total saltwater food finfish landings, excluding menhaden, were valued at nearly \$19.6 million for 2007.

Landings of menhaden, a low-value, but high-volume non-food finfish species, were 790 million pounds in 2007 worth \$45.0 million; up significantly from 2005. Menhaden value in 2007 was slightly higher than in 2006, at 5.25 cents per pound. Menhaden oil and meal are sold on the world market for industrial purposes, animal feeds and Omega-3 dietary supplements, among other uses, and the prices received for menhaden products is a function of the world supply of oils and meals, particularly those produced by the fisheries for the anchovetta of the Pacific Coast of South America.

In 2007, 12.8 million pounds of oysters were landed from private reefs and from wild reefs. Value was approximately \$3.12 per pound of oyster meat. To calculate prices per sack, assume 7.4 pounds of shucked oyster meat per sack. Gross value of oyster harvested in 2007 was \$40.1 million, up from \$35.9 million in 2006.

Blue crabs constitute nearly all of the Louisiana crab harvest, with stone crab claws making up less than 0.01%. Landings of hardshell blue crabs landings were 44.6 million pounds (worth \$34.3 million). Although this is a decrease in landings from the previous year (when 52.8 million pounds were landed), dockside value increased by 8%. Louisiana hard crab landings normally range from 40 to 50 million pounds.

Production of softshell crabs (11,902 pounds) and peeler crabs for the shedding business (191,547 pounds) remain low partly because of previous hurricane impacts to shoreside facilities.

Louisiana shrimp landings in 2007 consisted of four species: white shrimp, brown shrimp, seabobs and pink shrimp. White shrimp have historically provided 50-60% of the harvest by weight and around 70% by value; and in 2007 contributed 58% (63.4 million pounds) of total weight and 68% (\$94.1 million) of total value. In 2007 brown shrimp landings totaled 44.8 million pounds with a value of \$43.3 million dockside. The weighted-average price for shrimp was \$1.26 in 2007, up from \$1.07 in 2006, and comparable to the 2005 level. Overall landings of 109.5 million pounds were down from 135 million pounds in 2006. Shrimp landed in Louisiana had a gross value of \$138.1 million in 2007, down from \$144.7 million in 2006. Extensive damage to the shrimp fleet and infrastructure from the hurricanes of 2005 continued to affect both landings and prices in 2007.

## Fur

The 2007-2008 harvest of fur animal pelts had a gross farm value of \$0.21 million. This amount is represented by fur production only and excludes any value associated with meat production, predominately from raccoon and nutria carcasses. Value-added components raised the total value of furs sold in Louisiana during the 2007-2008 trapping season to \$0.26 million.

Animals pelted and sold totaled 46,575, which represented an increase of almost 28,000 pelts over last year. Mink pelts were down slightly from last year (581 in 2007, compared to 530 in 2008) while muskrat pelts were down significantly (from 2,234 in 2007 to 218 in 2008). Every other fur-bearer showed increases over last year's harvest. The biggest gains were in raccoon pelts (6,204 in 2007, compared to 11,956 in 2008) and nutria pelts (from 4,613 in 2007 to 27,033 in 2008). Pelt prices varied from lows of 81 cents for opossum to highs of \$28.60 for bobcats. Average gross farm value of individual pelts, regardless of species, was \$4.60 in 2007-2008.

Nutria accounted for the greatest number of furs taken (58%), with the remaining fur production coming from raccoon, muskrat, mink, opossum, river otter, red fox, grey fox, bobcat, beaver and coyote. Nutria removals in the state associated with the coast-wide nutria control program (CNCP) accounted for 308,212 animals being taken. This number is slightly lower than that recorded in 2007 for the same purpose. The incentive payment for these removals was \$5 each. Nutria removed for the \$5 incentive payment under CNCP, along with the gross dollar value of all other animals pelted, totaled \$1.75 million.

## Hunting Lease Enterprises

One measure of the value to hunters and landowners of recreational hunting in the state of Louisiana is expressed through the income derived from hunting lease enterprises. The number of producers who leased land in the state during the 2007-2008 hunting season was 6,474. This figure is represented by 5,086 individuals who leased land for upland game hunting (mainly for deer and turkey) and 1,388 individuals who participated in

waterfowl leases. Land leased for upland game totaled 6.1 million acres in 2008 while 1.7 million acres were leased for waterfowl hunting. Gross farm values for these leases were \$45.7 million for upland game land and \$39.6 million for waterfowl land. Average lease rates were \$7.50 per acre for upland leases and \$26 per acre for waterfowl leases. Waterfowl leases averaged \$15 per acre in the coastal areas of the state and \$50 per acre in other areas. Although overall acreage for waterfowl leases was up over last year, some areas of the state that received damage to agricultural fields as a result of Hurricane Gustav experienced lower leased acreages. This was the result of certain manipulations performed on damaged standing crops that rendered fields unlawful for hunting purposes because of the current Federal baiting guidelines. Leasing rates varied greatly throughout the state from lows of \$1 to highs to \$30 per acre for upland game leases. In all hunting-lease enterprises, rates were a function of location, habitat quality and species involved. A high demand for a good hunting lease will often results in higher prices than might otherwise occur. Value-added components raised the total economic impact of hunting leases in the state to \$94.7million.

## Honey

Honey production was up 10% above 2007 levels, to 2.3 million pounds collected in 2008. Early rains and a warm spring were conducive to honey production. A few isolated areas of the state were dry, and honey production was low in those areas. Colony registration showed an increase of 10% in the number of colonies from 2007 to 2008. This increase is attributable to the recovery following Hurricane Katrina. Although a few hives were lost during Hurricane Gustov, there is a strong upward trend in colony numbers. Weather conditions were erratic at times in 2008; however, overall conditions were good for beekeepers and their colonies. Honey prices increased over 2007 values; ranging from \$1 to \$1.25. Local beekeepers increased the marketing of their honey, and several labels can be found in the major supermarket chains around the state. Increased revenue from direct marketing has resulted in increased colony numbers.

Concern remains for the Colony Collapse Disorder (CCD), but Louisiana has not experienced any consequences from this problem that has devastated many of the migratory beekeepers around the country. CCD is a stress-related problem that magnifies other situations in the hives, and this information is being used to develop approaches to solving this problem. As a result of the severity of CCD nationwide, several Louisiana beekeepers are sending colonies out for pollination. This has become a very lucrative proposition of Louisiana beekeepers as CCD has taken out so many hives across the country. Louisiana has 11, 440 hives headed to California for almond pollination and another 5,000 headed east for fruit pollination. No one beekeeper has enough hives so several have combined colonies to service these agricultural industries.

Beekeepers continue to experience problems with Varroa mites and Small Hive Beetles. These two insect pests are the primary challenges facing the beekeeping industry in Louisiana. Improved management and information provided by the USDA-ARS Honey Bee Breeding, Genetics and Physiology Research Laboratory in Baton Rouge on traps for the small hive beetle should help to alleviate the pressure from this pest on the colonies. A few traps are on the market that are placed inside the hives. More

recent work, however, focuses on traps outside the hive that prevent the problems from developing inside the colonies.

The wild honeybee population continues to grow. Beekeepers are getting calls and references for colony and swarm removal. Several hundred calls after the last hurricane in Baton Rouge and surrounding areas asked for assistance with removing colonies from trees that had been blown over or from branches ripped off by the winds as well as removal from homes damaged by the storms. The beekeeper list on the Web site continues to have additions and hits to locate beekeepers to remove honeybees.

[www.lsuagcenter.com/en/environment/insects/bees\\_wasps](http://www.lsuagcenter.com/en/environment/insects/bees_wasps)

Gross farm value of honey in Louisiana was \$2.5 million in 2008. Value added from cleaning, processing and packaging honey was \$0.25 million so that total value of production in 2008 was \$2.8 million.

## Plant Enterprises

The total value of all plant enterprises was \$3.228 billion in 2008, a decrease of \$0.1 billion (4%) from 2007. Value added was \$2.980 billion for all plant commodities. Total value of all crop enterprises to the Louisiana economy was \$6.208 billion, a 14% decrease from 2007.

### Cotton

Land harvested for cotton (292,358 acres) in Louisiana in 2008 was 11% lower than the area harvested in 2007. The primary reason for this was losses caused by hurricanes Gustav and Ike. Average yield for the state was lower than in 2007 primarily because of weather damage associated with those two hurricanes. Cotton lint yield on irrigated land was 595 lb per acre compared to the 1,137 lb per acre in 2007; and on non-irrigated land was 483 lb per acre compared with 967 in 2007. The number of producers in 2008 was 596, down from the 962 producers in 2007. Total lint production in 2008 was 316,626 bales, less than one-half of the cotton production in 2007 (634,552 bales). In 2008 there were 95,817 acres of irrigated cotton and 196,541 acres of non-irrigated cotton.

Average value of cotton lint sales was \$317 per acre, for a total gross farm value of \$92.7 million. Sales of cotton seed contributed an additional \$100 per acre in additional gross income, adding a total of \$29.3 million to the 2008 gross farm value of the cotton sector. Seed sales were down from \$37.4 million in 2007, because of the weather-related decrease in cotton yield. Reduced farm value of cotton in 2008 was caused by two factors: (1) fewer planted acres as farmers shifted cropping systems to corn and soybeans in response to strong prices for those commodities; (2) two hurricanes reduced total harvested acres and severely reduced the yield and quality of remaining acres. Gross farm value of all 2008 cotton sales,

including seed, was \$122.0 million, significantly lower than the \$204.1 million in 2007. Value added from ginning and processing was \$12.2 million so that total value of the cotton sector was estimated to be \$134.2 million in 2008.

## **Feed Grains**

In 2008, 624,352 acres of feed grains were harvested in Louisiana, down from 978,823 acres in 2007. There were 505,169 acres of corn harvested, the largest acreage of all feed grains. Grain sorghum, with 114,849 acres, was second, and 4,334 acres of oats were harvested in 2008. Area planted and harvested to feed grains was relatively high, by historic standards, primarily because of strong grain prices at planting time. Acreage levels, however, were down from 2007 because of historically high costs for inputs like fertilizer and fuel during much of 2008. Two hurricanes had a major negative impact on yields in certain parishes. Most of the acres not harvested prior to the hurricanes had lower quality, and lodging resulted in some acre not being harvested at all. Gross farm value of all feed grains in Louisiana was \$390.8 million, a decrease from last year's sales of \$597.3 million. Value added in 2008 was \$58.6 million so that the total value of feed grain production to the state's economy was estimated to be \$449.5 million in 2008.

### **Corn**

The corn was grown on 1,441 farms in 2008, down from 1,558 farms in 2007. The statewide average yield was 139 bushels per acre in 2008, down considerably from last year's 168 bushels per acre. Planting conditions were good in 2008. Northern and central Louisiana, however, experienced heavy rainfall after two fall hurricanes that adversely affected yields. Severe weather caused lodging in many fields and this resulted in reduced harvest efficiency and added costs. Quality losses and yield losses were also the result of delayed harvest. The normal weed, disease and insect problems also were experienced. Gross value of corn production in 2008 was \$334.8 million.

### **Grain sorghum**

Grain sorghum was produced on 399 farms growing 114,849 acres, with an average yield of 59 hundredweight per acre in 2008. The levels were down from the 2007 levels. Excessive rains prior to harvest marred the growing season for many producers. Many acres were left unharvested because extensive water damage and flooding and generally poor field conditions. Gross farm value of sorghum production was \$54.9 million in 2008.

### **Oats**

Oat production decreased to 4,334 acres in 2008, down considerably from 8,754 acres harvested in 2007. Oat yields in 2008 were 85 bushels per acre, essentially the same as 2007 yields. Gross farm value of oat production was \$1.2 million in 2008.

## Forestry

The projected Louisiana gross farm value of forest products decreased significantly for the 2008 calendar year, the period this report covers. This marks two consecutive years of significant reductions in the forest products sector of Louisiana's economy and coincides with the sharp contraction in the national economy that began toward the end of 2007. The 2008 total sawlog harvest decreased by 326 million board feet (29%) to a cut of 970.9 million board feet. The pine sawtimber harvest decreased by 30%, to a total statewide harvest of 833.2 million board feet. The hardwood sawtimber harvest fell to 137.7 million board feet (a 21% decrease) in 2008. Pine chip-n-saw harvested in 2008 totaled 0.8 million cords, a decrease of 10% from 2007 totals. Over the last four years, chip-n-saw harvests have declined over 60%.

The 2008 Louisiana pulpwood harvest was 6.2 million cords, up 0.2 million cords (3%) from the 2007 harvest. Pine pulpwood harvest increased 2%, from 4.8 million cords in 2007 to 4.9 million cords in 2008. Hardwood pulpwood harvest increased by less than 0.1 million cords (7%), from 1.1 million cords in 2007 to 1.2 cords in 2008. This follows a 33% decline in hardwood pulpwood harvest in 2006.

Stumpage prices for the period were mostly lower for sawtimber products and chip-n-saw, and significantly higher for pulpwood products, reflecting increased demand for fiber as fuel wood during the year as fuel prices spiked and peaked. Pine sawtimber stumpage prices were 21% lower in 2008, averaging about \$266 per mbf for the year. Oak sawtimber stumpage prices were 2% lower on average around the state in 2008, at approximately \$235 per mbf for the reporting period. Statewide average pine pulpwood prices increased by 32% from 2007 levels. Hardwood pulpwood prices were 25% higher on average. The average pine pulpwood price for the year in Louisiana was almost \$29 and the average hardwood pulpwood price for the year was almost \$28. Chip-n-saw prices decreased 11% again this year, to a statewide average of approximately \$46 per cord.

With wood-using industries and commercial timber harvesting activities occurring in all parishes in Louisiana, forestry benefits both urban and rural areas. In 2008, Louisiana's private forest landowners received an estimated \$463.3 million from the sale of forest timber, down 26% from 2007 and down 37% for the last two years combined. Timber harvesting contractors and their employees earned \$487.9 million from harvesting the trees and moving wood to mills. This total was down 1% from 2007 levels. This income is recirculated many times throughout the economy. In addition, Christmas tree growers received \$1.08 million from the sale of trees, up 11% from the previous year. Louisiana-produced pine straw sales made \$27,600 in 2008. Louisiana's private sector forest tree seedling nurseries produced a crop worth \$87,500 in 2008.

The payroll and income derived from money generated by the forestry and wood products industry totaled an estimated \$3.2 billion in 2008, a decrease of 14% from 2007 totals. The gross farm income produced by all forestry-related products, such as timber, pine straw and Christmas trees totaled \$952.4 million in 2008, down 13% from the \$1.1 billion generated in 2007. The value added through further processing and delivery was \$2.3 billion, so that the total value of the forestry industry in Louisiana was estimated to be nearly \$3.3 billion in 2008.

# Fruit Crops

## **Blackberries**

Gross farm value of blackberries increased in 2008 by 13% to \$0.3 million. The primary reason for increased farm value was a 14% increase in prices received for fruit. There were 107 producers of blackberries in Louisiana in 2008 that produced an average of 2,412 pints of blackberries per acre on 65 acres.

## **Blueberries**

Blueberries are grown by 88 producers on 295 acres. The primary blueberry growing parishes are De Soto and Washington parishes with 174 acres. Most producers in other parishes sell fresh fruit to local clientele. Gross farm value of blueberries in 2008 was \$1.7 million.

## **Citrus**

The Louisiana citrus industry involves 505 growers in 17 parishes who grow 417 acres of navels, 385 acres of satsumas and 42 acres of other types of citrus, with a gross farm value of \$7.5 million. The value of citrus in 2008 was affected by hurricanes Gustav and Ike. Plaquemines Parish is the leading parish with 525 acres of citrus with a gross farm value of \$5.0 million. Lafourche produces 100 acres of citrus with sales of \$0.6 million.

The majority of the citrus is sold by direct marketing at roadside stands and farmers markets. Peddlers buy citrus on the farms and resale it across the state. Growers delivered citrus to grocery stores warehouses, individual grocery stores and fruit stands.

## **Mayhaws**

The gross farm value for mayhaws decreased 23% to \$0.1 million. Orchard mayhaw trees averaged 438 pounds per acre a decrease of 14% on 165 acres. Some of the orchard mayhaw acreage with older trees is starting to produce yields above 2,000 pounds per acre; however, damage from fire blight reduced yield on some trees by more than 50%. The registration of streptomycin for use on mayhaws should reduce the fire blight problem.

Native mayhaw harvest was light in 2008 with 498 acres producing 22,000 pounds with a value of \$21,972. Several mayhaw collecting areas were closed or had fruit harvesting restricted.

## **Miscellaneous Fruit**

Many miscellaneous fruits are planted as either small commercial plantings or as backyard plantings. These crops include figs, mayhaws, grapes, pears, plums, apples and persimmons. These fruits are planted on approximately 700 acres. Their estimated gross farm value is approximately \$0.2 million.

## **Muscadines**

Muscadine production reporting was divided into fresh fruit production and commercial production. Muscadines are currently grown for fresh fruit on 48 acres by 37 growers. Fruit was usually sold at \$5-\$12 per gallon with an average of \$8. The lower prices were generally used for u-pick muscadines. Production for juice and wine was considered commercial musca-

dine production. Muscadines grown for wine production is concentrated in East Feliciana Parish. A late freeze killed most of the fruiting bud on vines in the parish that caused a 62% decline in production. Louisiana produced 40 tons of commercial muscadines on 18 acres in 2008. The total gross farm value of muscadines in 2008 was nearly \$0.5 million.

### **Peaches**

Gross farm value of peaches in 2008 was \$2.2 million. Peaches are currently grown on 371 acres by 43 producers. Chill hours for most varieties were adequate for fruit set; however, a late freeze did cause minor damage to some varieties.

### **Strawberries**

The Louisiana strawberry industry involves 89 growers who are producing 395 acres of strawberries for a gross farm value of \$15.0 million. Strawberries are the leading fruit crop in the state. Tangipahoa Parish is the leading strawberry producing parish in the state with 300 acres and a farm value of \$12.0 million.

The majority of the Louisiana strawberries are sold by peddlers. Growers also deliver berries to grocery store warehouses, individual grocery stores and fruit stands. The remaining part of the crop is sold at farmers market and roadside stands.

Louisiana strawberries are now available in November, December and January. This early availability is due to the use of the variety Strawberry Festival, plug plants from nurseries in Quebec, Canada, row covers and wire hoops. These early berries bring a premium price and play a large part in the high returns for crop.

## **Greenhouse Vegetables, Commercial**

In 2008, 14 parishes had farms commercially growing greenhouse vegetables on 3.2 acres of greenhouse space. Acreage was down by 40% from 2007 as interest in greenhouse vegetable production declined. All production was devoted to tomatoes, except for one grower of hydroponic lettuce. All greenhouse produce was for fresh market sales, with much being sold direct-retail at local markets. Energy costs had become a major cost of production in the winter of 2008. No expansion in the greenhouse industry is expected. Estimated gross farm value of Louisiana greenhouse vegetables was nearly \$1.1 million in 2008. Total value of greenhouse produce, including value added, was \$1.2 million.

## **Hay Sold**

Hay production for commercial sales is a limited part of the total hay production in Louisiana. Nevertheless, hay produced from 100 acres of alfalfa and 344,314 acres of grasslands was sold by 3,039 producers in 2008. Yields averaged 3.0 tons per acre from the grasslands harvested for sale and 5.0 tons per acre from the alfalfa harvested for sale. Production included 1.09 million tons of grass hay and 500 tons of alfalfa hay. Compared yields and acreage harvested were reported in 2007, so that production from the 2008 hay crop was similar to the 2007 crop. Excellent

weather conditions persisted throughout much of the state during the spring and summer months, and conditions in the fall were also favorable for hay production. Gross farm value was \$132.2 million, which was similar to the 2007 crop that was valued at \$132.8 million. Many Louisiana hay producers were able to sell their hay into drought-stricken areas such as Georgia, Alabama and Texas for a very good price. Total value of hay production in Louisiana, including value added of \$14.6 million, was \$146.8 million in 2008.

Hay for all uses was grown on 440,000 acres and produced 3.2 tons per acre, for a total production of 1.4 million tons. This total production in 2008 was about 17% higher than that reported in 2007. The number of acres devoted to hay production for all purposes increased by 40,000 acres from 2007 to 2008.

## Home Vegetable Gardens

The 2008 gross farm value of home vegetable gardens in Louisiana was estimated to be \$136.4 million. Parish reports indicated 340,963 home gardens statewide, suggesting that garden interest was up 2% from last year. The reason this figure does not show a greater participation in gardening is that many south Louisiana residents who gardened were displaced by the 2005 hurricanes and not all have returned to their home sites or resumed gardening. A 2008 survey of Louisiana home gardeners showed an average age of 62 and median age of 67. The median Louisiana garden size was 800 square feet and calculated to have a normal cash value of \$512. A discounted median value was given for 2008 due to hurricane losses that year.

Vegetable gardening is not only a hobby, but a way of extending the family food budget and freeing up some limited funds for other purchases. Every parish reported home gardens. Largest concentrations were found in the urban areas of Caddo, Calcasieu, East Baton Rouge, Jefferson, Lafayette and Ouachita parishes.

## Nursery Crops

Commercial nursery crop production in 2008 had a gross farmgate value of \$112.7 million. Wholesale production was \$4.0 million for fruit and nut trees. Foliage plants had \$3.0 million in farmgate value in Louisiana in 2008. The largest segment of nursery industry continues to be woody ornamentals (trees and shrubs) with a wholesale production value of \$81.6 million in 2008. Bedding plant and floriculture crop production was stable in 2008 with a farmgate value of \$24.1 million. Including value added of \$57.5 million, the total value of the Louisiana nursery industry at wholesale level was \$170.2 million in 2008, a slight decrease from 2007.

## Other Oilseeds

During 2008, 107 acres of sunflowers were harvested and sold for commercial processing at \$2.7 million. Total value of other oilseed production, including value added, was \$2.8 million in 2008.

## Pecans

Louisiana pecan growers had a very disappointing year because of hurricanes Gustav and Ike. The state's pecan crop estimates during the summer were 14-15 million pounds, which is near the state's average. The crop estimate was dropped to 7 million pounds after Hurricane Gustav because it caused severe wind damage to trees in south, central and northeastern Louisiana. Eastern Louisiana also received severe flooding. A lot of heavily loaded pecan trees were broken up or blown down in Pointe Coupee Parish, Louisiana's top pecan-producing parish. Damage from Hurricane Ike was primarily in western and northern Louisiana. It became apparent when harvesting began that the amount of hurricane damage to the crop was underestimated, since many of the pecans that remained on the trees were empty shells when harvested. It appeared that twisting of the stems of the pecan nut and bruising of the shuck by winds prevented nut development on many nuts that stayed on the trees.

Louisiana harvested 4.4 million pounds of pecans in 2008, which was nearly 10 million pounds below the state average of 14 million pounds. The crop was composed of 2.0 million pounds of improved pecans and 2.4 million pounds of native pecans.

Wholesale prices in Louisiana for natives averaged \$0.72 per pound, while improved pecans averaged \$1.17 per pound. Prices varied considerably because of quality, location, time of sale and quantity of pecans sold. The gross farm value was estimated to be \$4.0 million. This is \$4.7 million below 2007 levels and \$14.4 million below the 2006 crop. Total value of pecan production, including value added of \$1.0 million, was \$5.0 million in 2008.

## Rice

Rice acreage in Louisiana increased dramatically from 370,122 acres in 2007 to 458,204 acres in 2008. A surprising surge in rice prices accounted for most of the increase in rice acreage. In some instances seed of some varieties were in short supply and planting was later than normal because of last minute decisions to plant rice.

The crop appeared to be on track to produce yields rivaling the record 6,515 pounds per acre harvested in 2007, but the combination of tropical depression Faye and hurricanes Gustav and Ike ruined that potential. A disappointing 5,800 pounds per acre were harvested. About 15% of the acreage was planted to hybrid varieties and 47% to Clearfield varieties. The hybrid acreage is expected to remain about the same while an increase in Clearfield varieties is anticipated next year. Rice acreage in Louisiana is expected to increase slightly or remain about the same depending upon price strength going into the planting season. Fertilizer and fuel costs will be instrumental in determining final acreage.

The Louisiana crop was harvested by 1,103 producers, virtually the same as 2007. The gross farm value was \$423.5 million, \$177.5 million more than the year before. The increased acreage and better prices, offsetting yield declines, accounted for this increase. Value added to rice production of \$127.1 million increased the total value of rice production to \$550.6 million in 2008.

## Sod and Turfgrass Production

In 2008, 25 sod farms cultivated 4,448 acres of fine turf grasses. Sod acreage reported was up by 10% (almost 400 acres) from 2007. Louisiana sod farms were not located in storm-flooded areas because sod fields must drain well and have lighter soils. About 60% of the turf sod acreage in Louisiana is centipede grass and about one-third St. Augustine grass. The remaining acreage is divided among Bermudas and zoysias. With new construction and rebuilding because of the hurricanes, Louisiana sod markets continued to enjoy high prices. Toward the end of 2008, however, housing markets began to soften due to subprime housing issues. Shipping costs were especially expensive in spring with record fuel and energy prices. As a result, local sod is more cost-competitive. Shipping costs have always been a major component of consumer sod cost. Given these conditions, and continued decline in the housing market, prospects for 2009 do not look as bright as they have been in the sod and turfgrass sector. Gross farm value of sales was \$21.6 million for 2008. Value added for turfgrass production was \$16.2 million, so that total value of sod and turfgrass production in Louisiana in 2008 was \$37.8 million.

## Soybeans

Soybeans were harvested from 1.0 million acres by 2,254 producers in 2008, with a statewide average yield of 30 bushels per acre. Though lower than the 42 bushels per acre average yield from last year, output could have been much lower due to the rainfall associated with two major hurricanes and a tropical storm that impacted most of the soybean acres. Statewide, producers faced the usual weed, disease and insect problems, but a relatively new pest, the red-banded stink bug, has become a major insect pest of soybeans in Louisiana. Many acres experienced “green soybeans” because of environmental conditions, disease and/or insect pest. “Green soybeans” do not mature properly and as a result yields are reduced and quality is lower. Asian soybean rust continues to be a major threat in Louisiana although its presence so far has not resulted in major yield losses. Gross farm value of soybeans in Louisiana was \$308.8 million, a significant rise over last year’s sales of \$202.5 million, due primarily to much higher prices for soybeans throughout the 2008 growing season. Value added to soybean production was \$30.9 million so that the total value of soybean production in 2008 was \$339.7 million, 53% greater than 2007.

## Sugarcane

In 2008, sugarcane was grown in 22 parishes on 401,435 acres (a decrease of 17,498 acres or 4% when compared to the 2007 crop) by 526 producers (a decrease of 83 producers or 14%; this is the largest decrease in the number of producers in recent years). An estimated 375,342 acres (a decrease of 16,360 acres or 4%) were available for harvest for sugar, assuming 6.5% of the total acres were used for seed cane purposes. The actual acreage for harvest may be slightly lower because, undoubtedly, more cane was needed for seed due to the lodged condition of the crop at planting as a result of two hurricanes (Gustav and Ike) that affected the industry in 2008. Further, many producers had to plant “billets” as they were unable

to plant the crooked, whole stalks. The use of billets means a decrease in the planting ratio resulting in the need for more seed cane per acre.

The 13 factories (12 raw sugar factories and 1 syrup factory) processed 12.3 million tons of cane (a decrease of 1.1 million tons or 8% when compared to 2007). There was an increase of one factory when compared to the 2007 crop because of the reopening of the St. James Factory by Louisiana Green Fuels. The sugar produced from the Lacassine syrup factory was crystallized at the Enterprise factory at Patoutville near Jeanerette, Louisiana. In total, the 12 raw sugar factories produced 1.4 million short tons of sugar (96 pol) (a decrease of 0.08 million short tons or 6%). Accordingly, the average yield of cane produced per total acre was 30.5 tons (a decrease of 1.4 tons or more than 4%). The average yield of cane produced from each harvested acre amounted to 32.7 tons (a decrease of 1.4 tons or 4%). The average sugar recovery at the 12 factories was 11.2% or 224 pounds of sugar (96 pol) per ton of cane; this was an increase of 6 pounds of sugar per ton of cane or an increase of 2% when compared to the 2007 crop. The yield of commercially recoverable sugar produced per total acre averaged 6,832 pounds (a decrease of 122 pounds or nearly 2%). Sugar produced per harvested acre was approximately 7,325 pounds (a decrease of 109 pounds or 1.5%).

The gross farm value of the 2008 sugarcane crop was \$357.6 million for sugar and molasses (a decrease of 4% when compared to the 2007 crop). The gross farm value reported above represents 60% of the value of the sugar and molasses produced, with the remaining percentage going to processing and marketing (\$244.1 million). The total value of the sugarcane crop to Louisiana producers, processors and landlords at the first processing level was actually \$601.7 million. Sugarcane still ranks first in total value among the state's row crops.

Although field yields were undoubtedly impacted as a result of the two hurricanes, the loss of cane tonnage was partially offset by an increase in the yield of recoverable sugar per ton of cane. Even with the reduction, the 32.7-ton yield was the seventh best in the state's history, and the yield of sugar per acre for the 2008 crop was the third highest. The total tons of cane produced were the ninth largest in the state's history, and the yield of recoverable sugar per ton of cane was second best. Even though the acreage in sugarcane has dropped by over 94,000 acres in Louisiana since 2000, the 2008 crop was still the sixth largest crop in its 213-year history. There has been a gradual trend each year towards fewer acres planted to sugarcane in Louisiana since 2000 when there were approximately 496,000 acres. The fewer acres can be attributed to urban encroachment, a switch to other crops (especially grain in the northern region of the sugarcane belt because of higher commodity prices for grain) and the continued low prices received for sugar. Sugar prices have remained low and virtually unchanged for the past 25 years although molasses prices have continued high for the last several years.

The 2008 sugarcane variety census shows that Louisiana producers have switched to the newer varieties, especially HoCP 96-540 (44% of the planted area) and L 97-128 (17%) while dramatically decreasing the area planted to LCP 85-384 (91% in 2004 to 22% in 2008).

Although field yields were somewhat disappointing for the 2008 crop, there were several reasons for the shortfall. For the most part, producers were very satisfied with the performance of the newer varieties as they realized that yields were compromised because of a significant drought during much of the summer in several areas of the belt, the impact of the two hurricanes on sugarcane growth and harvestability (with lodged cane there is a tendency for greater scrap losses in the field) and the dry weather conditions that reduced extraneous matter in harvested cane (lower extraneous material meant lower gross yields but better cane quality and a higher level of recoverable sugar per ton of cane). Also, approximately 30,000 acres of sugarcane were flooded as a result of Hurricane Ike that caused lower yields of both tons of cane per acre and recoverable sugar per ton of cane.

Although rainfall was generally well-distributed throughout the growing season, several areas of the state experienced brief periods of drought during the summer that may have adversely affected cane and sugar yields in those areas. For the most part, rainfall was below normal during the harvest season that helped to improve the quality of harvested cane. Following the hurricanes, cane growth slowed dramatically because of excessive lodging and physiological shock to the plant. Also, after the storms was an extended period of dry weather with unlimited sunlight that helped improve maturity of the crop. Previous research has shown that given a variety with early maturity and high sucrose content, incident sunlight is the most important criteria in sugarcane maturity in Louisiana. Because of the lodged conditions of the crop, the usage of the chemical ripener glyphosate was reduced, although approximately 50% of the total acres harvested were treated to help to improve the yield of recoverable sugar per ton of cane. With the lodged condition of the crop, however, it is expected that the response to the ripener was lessened. Another possible reason for the improved yield of recoverable sugar per ton of cane was the delayed start to the grinding season as a direct result of the two hurricanes. Many producers had little or no cane planted prior to the storms and, with the crooked stalks, most of the cane was planted in September and October as planting efficiency was reduced. Most producers are unable both to plant and harvest their crops at the same time as the same personnel and equipment are used in the two operations.

Although cane and sugar yields were generally good throughout much of the sugarcane belt, producers reported lower profits because of the low price of sugar and the high input prices paid for fuel and fertilizer. Because of the high cost of fertilizer in general, many producers used less nitrogen in 2008 than was used in past years although recommendations have stressed that maximum yields of sugar per ton of cane and per acre could be achieved with lower rates of nitrogen. Undoubtedly, the lower rates of nitrogen helped improve the maturity of the crop and increased the yield of recoverable sugar per ton of cane. Producers also applied less phosphorus and potassium in 2008 because of the high costs. Further, research data have shown that little or no response in yield of cane or sugar per acre could be expected when used even though soil tests indicated there was an insufficient level of these nutrients in their soils. In an effort to reduce fuel costs, many producers operated their whole-stalk or “soldier” harvesters whenever possible and burned standing cane prior to harvest with the cane combine.

## Sweet Potato

Louisiana sweet potato producers harvested a below-average crop in 2008. Sweet potato acreage was similar to that in 2007 at approximately 14,500 acres. Total production in 2008 was drastically reduced because of weather-related disasters compared to that in 2007. Total production in 2008 was estimated at 2.6 million bushels compared to 5.5 million bushels the previous year. The average FOB price received for the 2008 crop was \$14.00-\$16.50 for a 40-pound box. Processors paid an average of \$6-\$7 per cwt. Total gross farm value for sweet potatoes was \$27.3 million with approximately \$17.7 million from fresh sales and \$9.6 million from processor grade potatoes.

The production year started off on a positive note. Soil moisture and temperatures were ideal for planting from May through mid-June and, as a result, the majority of the crop was planted under good conditions. Producers experienced unusually dry conditions in late June and July across the state. Predictions for crop potential were optimistic in early August but soon changed when production areas were inundated with rainfall in late August and September. Late August rainfall and rainfall associated with hurricanes Gustav and Ike created field conditions that negatively impacted over 90% of Louisiana's sweet potato acreage. Production areas across the state received from 15 – 40 inches of rainfall in a short period of time, creating saturated soil conditions, which resulted in significant losses and yield reductions in production fields. In addition, the excess moisture contributed to delayed maturity, and harvest operations were delayed across the state.

Acreage in 2008 was similar to that of 2007 but yield and quality of the crop were drastically reduced 2007 levels. The statewide average yield of the crop was reduced 50% lower in 2008 than 2007. In addition to yield losses in the field, quality losses associated with breakdown of roots and water damaged roots in storage resulted in reduced pack-out percentages. Quantitative and qualitative losses of the 2008 Louisiana sweet potato crop were estimated at 70% in 2008. Despite the problems mentioned, initial movement and price of the 2008 crop were strong, and the stored supply is expected to last through the Easter shipment.

Sweet potato acreage in Louisiana is anticipated to remain at current levels with the potential for a slight decrease in 2009, due to the economic constraints placed on producers after the 2008 crop losses. The demand for sweet potatoes is increasing in domestic and foreign markets. Long-term expectations are for Louisiana producers to increase their acreage to satisfy the increasing demands of more health-conscious consumers and to take advantage of niche markets to increase profitability.

## Vegetables, Commercial

The Louisiana vegetable industry involves 3,500 growers who grow more than 40 different vegetable crops on 8,519 acres for a gross farm value of \$44.9 million. Value added from commercial vegetable production was \$67.3 million, so that total value of vegetable production in Louisiana in 2008 was \$112.2 million, down slightly from 2007.

The majority of the vegetable crops grown in Louisiana are sold by direct marketing at farmers markets and roadside stands. Direct market-

ing offers the producers a retail price with a minimum amount of risk. The development of farmers markets has greatly enhanced the marketing and value of vegetable crops in the state.

The remainder of the crops is delivered to grocery stores warehouses, individual grocery stores and fruit and vegetable stands. Most of the watermelons grown in the state are sold to peddlers and only a small percentage is sold to the wholesale markets.

Tomatoes (581 acres) at \$13.3 million and watermelons (2,711 acres) at \$6.4 million were the two leading vegetable crops in the state. Southern peas (1,829 acres) at \$4.6 million, peppers (131 acres) at \$3.7 million and cabbage (260 acres) at \$3.2 million in gross farm value rounded out the top five vegetable crops.

Tangipahoa Parish is the leading vegetable parish in the state with a gross farm value of \$7.8 million. The leading crops in this parish are tomatoes, peppers, cabbage and cucumbers. Plaquemines Parish is the second leading parish in vegetable production with a value of \$5.1 million. Tomatoes are the major crop in Plaquemines Parish. Bienville (\$2.7 million) and Union (\$2.7 million) are next in total sales. Watermelons and southern peas are the major crops in both parishes. Pointe Coupee, which grows 30 different vegetables, also had \$2.7 million in gross farm value in 2008 and rounds out the top five parishes in vegetable production.

## Wheat

Wheat was harvested from 377,995 acres by 907 producers in 2008, a large increase from the 228,113 acres harvested in 2007. The favorable prices received for wheat in 2008 was the primary driver in such a significant increase in wheat acreage. Yields for 2008 averaged 57 bushels per acre, which was similar to the average yield reported in 2007. Total production was 21.4 million bushels, which was significantly higher than the 13.5 million bushels harvested in 2007. Favorable prices received and the increased wheat acreage contributed to a large increase in gross farm value of the wheat crop. The gross farm value of the 2008 crop was valued at \$162.1 million, more than double the 2007 crop valued at \$73.2 million. Value added for wheat was \$17.8 million so that the total value of the wheat crop in Louisiana was \$180.0 million in 2008.

*\*\* The marine, freshwater and oyster data presented here are for the year 2007 rather than 2008. Release of fisheries landings data by the collecting agencies occurs 4-5 months after the fact. Another reporting system was used in previous years, so this year's data are not directly comparable to that of previous years.*

*\*\* The marine, freshwater and oyster data presented here are for the year 2007 rather than 2008. Release of fisheries landings data by the collecting agencies occurs 4-5 months after the fact. Another reporting system was used in previous years, so this year's data are not directly comparable to that of previous years.*

\*\* The marine, freshwater and oyster data presented here are for the year 2007 rather than 2008. Release of fisheries landings data by the collecting agencies occurs 4-5 months after the fact. Another reporting system was used in previous years, so this year's data are not directly comparable to that of previous years.

\*\* The marine, freshwater and oyster data presented here are for the year 2007 rather than 2008. Release of fisheries landings data by the collecting agencies occurs 4-5 months after the fact. Another reporting system was used in previous years, so this year's data are not directly comparable to that of previous years.

## PRICES OF COMMODITY PRODUCTS

The gross farm value of the commodities reported in the parish tables was computed based upon estimated annual per-unit prices. The state average prices listed below were used for most parishes for most commodities. However, a parish price was used if the parish price was significantly different from the state price.

### PLANT ENTERPRISES COMMODITIES

Commodity	Unit	2008 Price
<b>COTTON</b>		
Lint - Irrigated	lbs.	\$0.61
Lint - Non-irrigated	lbs.	\$0.61
