## Termite Repelling Treatment

### **Description:**

A new substance has been discovered that more effectively deters termites from feeding on wood or cellulose and kills most of their colony. Termites that feed on the substance will die; termites given a choice of feed materials will not eat the treated material. This substance is non-toxic to mammals and is effective in very small amounts.

### **Advantage:**

- Stronger repellent
- Greatly reduces termite populations
- Effective at low concentrations
- Non-toxic

### **Commercial Uses:**

- Wood treatment
- Termite repellent
