## Biodegradable Fish Lure Material with Superior Attractants

**Inventors:** Subramaniam Sathivel, John T. Caprio

### **Description:**

LSU AgCenter scientists have developed a novel fishing lure material that can enhance fish attractants. The material is biodegradable and water soluble, so it will not cause environmental harm if lost or ingested by fish. The material is also uniquely designed to contain and slowly release fish attractants meaning that a small amount of attractant will last longer in a given area and potentially lure a larger number of fish.

### **Advantage:**

- Environmentally friendly
- Extends the effects of fish attractants
- Provides broader fish attractant options

### **Commercial Uses:**

- Sports Fishing
