Agriculture: Backbone of Louisiana's Economy

This publication tabulates the value of Louisiana agriculture in 2010. Agents and specialists of the Louisiana Cooperative Extension Service, as well as other agencies – both private and public – compiled the data. Their analysis focuses on the animal, forestry, fisheries, plant and wildlife commodities that comprise our vital agricultural industry. Agricultural and natural resource industries contribute significantly to our state's economy with the potential for increased economic benefits and job creation through value-added processing in urban and rural communities throughout Louisiana.

The 2010 production year was much improved over the previous two years for most in the state's food and fiber sector. After struggling with hurricanes in 2008 and excessive rains in 2009, the 2010 production year and, more specifically, the 2010 harvest season were vastly improved. The production and harvest year were not, however, uneventful. After a fairly good planting season, weather conditions turned dry and remained dry across the state for much of the growing season. Dry conditions and hot temperatures affected yields of crops harvested early and had an effect on forage availability and hay production in the livestock sector. Late-season rains provided some relief for later-harvested crops, and the nearly ideal conditions that were experienced helped many producers harvest quickly and efficiently.

Improved growing and harvest conditions resulted in increased year-to-year production levels for many row crops. Virtually ideal harvest conditions helped bring yields for commodities such as cotton, sweet potatoes and soybeans back to and above trend-line levels. In addition, improving domestic and international economies created significant optimism for demand prospects over the last half of 2010 and resulted in sharply higher commodity prices for most row crop and livestock commodities. The increases of commodity prices to record or near-record levels certainly helped to improve the profitability outlook for producers heading into the end of the year and helped to offset rising fuel and fertilizer prices experienced at the end of 2010.

While relatively dry conditions during the winter of 2010-2011 have created some issues for livestock producers with winter forage production and have increased the need for ample rains during the spring of 2011 to replenish soil moisture, the general condition of the food and fiber sector is much improved when compared to the previous year. Stronger commodity prices have generally created a very optimistic outlook for the sector, despite rising input costs.

Although Louisiana's agriculture and natural resource industries certainly encountered many challenges in 2010, the state's producers were able to generate farm-gate sales totaling \$5.5 billion during the year. When those commodities were cleaned, processed and packaged, the value added brought in another \$4.4 billion, for a total contribution to our state's economy of \$9.9 billion. While farm-gate values and levels for value added for specific commodities may vary from year to year because of changes in output caused by weather problems, lower or higher commodity prices or significant changes in acreages, the food and fiber sector continues to be vital to

the state's economy. Cutting-edge research programs and extension education and outreach efforts remain critical to sustaining these significant economic benefits.

Many Louisiana communities depend on agriculture, forestry, fisheries and wildlife for local jobs and their economic well-being. The heart of agronomic agriculture is found in northeastern, southwestern and south central Louisiana. Forestry production occurs mostly in the state's hill parishes, and fisheries production takes place mostly along the coast, although the aquacultural production of catfish is located mainly in the northeast Louisiana delta area.

For those who work in it day in and day out, agriculture, forestry and fisheries are far more than a business, a major job contributor and an economic engine. It truly is a way of life. Families have lived on many of these farms, forest lands or fishing villages for generations following a preferred way of life even though it means hard work, many hours, high risks and sometimes low incomes.

Each new production season has risks associated with commodity prices, trade agreements and higher input costs as well as uncertainty related to the weather. These conditions make the discovery and adoption of new agricultural technology developed by the LSU AgCenter more important than ever to our state's producers.

Agriculture is a highly sophisticated segment of the national and world economy; becoming increasingly more so every year. That is the reason we at the LSU AgCenter continue to support agriculture and consumers with factual information provided by a well-trained faculty of extension agents, specialists and research scientists.

Those of us in the LSU AgCenter (with its major branches of the Louisiana Cooperative Extension Service and the Louisiana Agricultural Experiment Station) are proud to be part of Louisiana's agricultural industry, and we are committed to serving that industry and the citizens across the state of Louisiana in the years ahead.

Sincerely,

A handwritten signature in black ink that reads "Paul Crain". The signature is written in a cursive, flowing style.

Vice Chancellor, LSU AgCenter
And Director, Louisiana Cooperative Extension Service

Louisiana Summary

Agriculture and Natural Resources

2010

The statistical information in this summary is compiled from estimates made by extension agents of the LSU AgCenter after consulting with agricultural agency representatives, agricultural and agribusiness leaders and others and after study of various reports and resource materials. State specialists with the LSU AgCenter check parish-level data for specific commodities to ensure accuracy and consistency of production information. Additional review of data is conducted by LSU AgCenter agricultural economist and project director Dr. John Westra in consultation with external sources, including state and federal statistical agencies. Any inquiries about the data in this publication should be directed to Dr. John Westra in the LSU AgCenter's Department of Agricultural Economics who oversees the process of gathering all information for the Louisiana Summary.

Although this material is reasonably accurate and can be used for planning and other general informational purposes, this is not the official document of agricultural data for the state. Official statistical data are gathered, summarized and published by the U.S. Department of Agriculture's National Agricultural Statistics Service, Louisiana Field Office, P.O. Box 65038, Baton Rouge, LA 70896. Reproduction or publication of information in this summary should acknowledge the unofficial nature of the statistics.

A gross value has been computed for each commodity, which in some cases includes a value from natural resources and consequently may not represent income to farmers. Gross farm values were calculated using calendar-year, market-weighted, state-level average prices, when available. The gross value is an indicator of the commodity's contribution to economic activity in the state but is not an indicator of farm profits. Production costs greatly affect profit (or loss) for many commodities. Even when gross income increases over previous years, corresponding increases in production costs may decrease farm profits.

In the state summaries, the value added in cleaning, processing, packaging, marketing and transporting commodities is an estimate of the total contribution of agriculture and natural resources to the state's economy.

The state summary is not an exact summation of all parish reports because adjustments may occur due to changes in average prices received or to accommodate information from other sources.

In each parish table only commodities that were of commercial economic value in that parish this year were listed. In some instances, the number of producers or the number of acres in a parish were not available. An asterisk is used to avoid releasing confidential information when too few producers are present for that commodity. Within some commodity groups, such as grains, fruits and commercial vegetables, the total number of producers has been omitted because some producers grow several different crops within the group. Adding together the producers of individual crops would not give a true total for the group.

Animal Enterprises

Gross farm income for all animal enterprises was \$1.684 billion for 2010, up 24 percent from \$1.356 billion in 2009. Value added was \$948 million in 2010. Total value of all animal enterprises in the Louisiana economy was \$2.632 billion, up 35 percent from \$1.950 billion in 2009.

Beef Cattle

During 2010, the Louisiana beef cattle industry reduced its cow numbers, which was in line with national herd trends. This was driven, in part, by increasing feed costs – a major component of beef cattle production and finishing operations. Louisiana cow numbers in 2010 totaled 558,459 with a reported 11,149 producers; those were down from 602,450 and 11,534 producers reported in 2009.

The gross farm value of steer sales in 2010 was \$127.2 million; an increase of nearly \$14 million over the \$113.4 million reported in 2009. The gross farm value of heifer sales increased by more than \$13 million as it rose from \$90.3 million in 2009 to \$103.7 million in 2010.

The number of cow-calf pairs sold in 2010 increased to 60,849 pairs. These pairs sold for \$60.8 million. Yearling cattle sold for \$44.4 million in 2010. Gross farm values of 61,892 cull cows and 8,920 cull bulls were \$25.6 million and \$8.7 million, respectively.

Gross farm income from beef cattle increased from \$329.2 million in 2009 to \$370.5 million in 2010. When value added of \$40.8 million is considered, the total value of beef cattle production in Louisiana was \$411.3 million in 2010.

Dairy

Milk production was reported by 14 parishes in 2010. Three parishes in the southeastern part of the state and one parish in the northwestern part accounted for about 91 percent of the milk production, about 89 percent of the herds and 91 percent of the dairy cows.

The number of dairy farms in Louisiana declined from 166 in 2009 to 145 in 2010. The number of milking cows decreased from 20,105 head in 2009 to 16,050 in 2010. Total milk production decreased from 273.1 million pounds in 2009 to 218.6 million pounds in 2010. The on-farm value of milk increased slightly, however, from \$39.3 million in 2009 to \$39.7 million in 2010. Despite lower milk production, gross farm value of milk in 2010 increased from the 2009 level primarily due to a higher average price per hundredweight of milk (\$14.39 in 2009 as compared to \$18.15 in 2010).

The value of cull cows, bred heifers, mature cows, breeding age bulls and calves was \$7.5 million. The total value of milk and animal sales to Louisiana dairy producers was \$48.3 million. Value added contributed \$77.9 million, so the total economic contribution from dairying in Louisiana, including milk sales, animal sales and additional processing, was \$126.2 million.

Horses

The horse industry is an important component of the agricultural economy of Louisiana. In 2010, 129,288 horses were owned by an estimated 45,242 people, a 12 percent decrease from 2009. The horse industry has three sectors constituted of 30 percent racing, 15 percent show or competition and 55 percent recreational horse owners.

The state's race horse industry was made up of 1,765 breeders who owned 12,425 mares that produced 10,059 foals that were sold in 2010 for \$80.5 million. A total of 120 breeders own 1,531 stallions that were bred to 10,099 mares, generating income from stud fees of \$25.2 million. The total gross farm income generated from race horse production was \$105.7 million.

An additional 2,260 race horse owners had 11,788 race horses in training or on the track with a gross farm value of \$141.5 million. The gross farm value of the entire race sector (owner and breeder activities) of the horse industry in 2010 was \$247.2 million. This was slightly (2 percent) lower than 2009 and could be associated with a slight decrease in the race industries incentive fund program, which has promoted more breeding of horses and horses being trained by owners within Louisiana.

The show and competition horse industry (horse shows, barrel racing, cutting, roping, team penning and others) is composed of 2,579 breeders who own 7,959 mares that produced 5,246 foals that were sold for \$21 million. These breeders own 949 stallions that were bred to 4,549 mares, generating \$6.8 million in income from stud fees. The total income generated from show and competition horse production was \$27.8 million. Another 4,027 owners compete on their 13,307 horses, which had a gross farm value of \$66.5 million. The total gross farm value of the show and competition sector of the horse industry was \$94.3 million. This total was down 7 percent from 2009 and could be the result of higher fuel and feed costs experienced during 2010.

A large portion of the horse industry was recreational. Horses have been used for comfort, exercise and enjoyment for quite some time. Approximately 30 percent (9,876) of the recreational horse owners bred 19,921 mares and sold 13,474 foals in 2010 for \$20.2 million. These horse owners had 2,248 stallions that were bred to 7,711 mares and generated income from stud fees of \$3.9 million. The total income from production in the recreational horse industry was \$24.1 million in 2010. Another 24,618 recreational horse owners have 53,055 horses valued at \$79.6 million. The total economic effect of the recreational horse industry is \$103.6 million.

There are a total of 129,288 horses in Louisiana, which were owned by 45,245 people, and had a gross farm value of \$445.2 million in 2010. Total value, including value added, for the horse industry in Louisiana was \$494.1 million in 2010.

The average horse owner spends about \$4,000 annually on feed, tack, equipment, veterinary supplies and medicines. This results in an estimated expenditure of \$721.7 million on horses and a total economic impact of \$1.81 billion.

In addition to the value of horses produced and maintained in Louisiana, the activities of the horse industry generate a tremendous cash flow for the state. The four racetracks employ 3,000 people and generate

expenditures of \$1 billion each year. The show and competition industry conducts an estimated 500 activities per year and generates \$20 million in expenditures. With the value of horses, expenditures on horses and the activities in which they engage, the economic effect of the horse industry is estimated at \$2.4 billion per year. This value coincides with a recent study by the American Horse Council that estimated the Louisiana horse industry generated \$2.45 billion per year for the state's economy.

Poultry

Broilers and Eggs

Poultry production continues to be the largest animal agricultural industry in Louisiana and is second only to forestry in total income production for all agricultural commodities. In 2010, 350 Louisiana growers produced 889.3 million pounds of broiler meat with a gross farm value of \$735.8 million. Commercial broilers are produced in 11 parishes: Bienville, Claiborne, Jackson, Lincoln, Natchitoches, Ouachita, Sabine, Union, Vernon, Webster and Winn.

There were 201 breeder flock producers in 2010 that produced 19.8 million dozen eggs with a gross farm value of \$39.6 million. There also were 32 pullet producers that produced 1.3 million pullets with a gross farm value of \$12.7 million.

There were 580 edible egg producers (small producers and commercial operations) in Louisiana in 2010. Table egg production was 21.3 million dozen eggs. The farm value for commercial egg production was \$20.9 million in 2010.

The gross farm value for all poultry production in Louisiana was \$811.7 million during 2010. The value added from poultry production to the Louisiana economy was estimated to be \$779.2 million, making the total value of poultry production in Louisiana \$1.6 billion in 2010.

Ratite and Other Exotic Fowl

The sale of ratites and exotic fowl did not generate any funds in Louisiana during 2010.

Quail

There were 7,850 birds produced in 2010 by 26 producers. Quail generated a gross farm value of \$27,475 in 2010.

Rabbits

The production of rabbits for meat and exhibition involved 429 Louisiana producers in 2010. The fryer industry produced 85,107 pounds of meat. Louisiana rabbit producers generated \$127,661 in gross farm income. Sales from does generated an additional \$9,830 in gross revenues for producers. With value added of \$13,062, the total value of rabbit production in Louisiana during 2010 was \$150,552.

Sheep and Goats

Sheep, lambs and wool were produced by 330 producers in 30 parishes in Louisiana during 2010, a slight decrease from the previous year. The

total number of lambs marketed (slaughter, feeder and club/show lambs) was estimated to be 4,463 for with a value of \$730,000 in 2010, up considerably from last year. Stocker sheep sold numbered 595 head, up from last year. Cull sheep sold were estimated at 1,190 head, essentially unchanged from the previous year. Wool production was estimated at 16,465 pounds, down from last year. Total farm-gate value of sheep sales was \$2.7 million in 2010, and total value was \$3 million when value-added contributions were included. This was up somewhat from last year.

Goats were produced by 876 farmers in 60 parishes in Louisiana in 2010, a sharp decline from 2009. Total number of slaughter goats marketed was estimated to be 9,150 head, up from the previous year. Stocker goats sold numbered 3,330 head in 2010, a slight decrease from 2009. There were 2,636 cull goats marketed this year, slightly more than 2009. Goats sold as club/show goats numbered 2,562 head, a slight decrease from 2009. Gross farm value of goats sold in Louisiana during 2010 was \$3.3 million, up from \$2.5 million in 2009. Total value of production was \$3.6 million when value added contributions were included.

Swine

Louisiana pork producers numbered 428 in 2010 compared to 423 in 2009. St. Martin, Calcasieu, Vermilion, Rapides and Beauregard parishes reported the largest numbers of swine producers.

The number of sows reported in 2010 was 3,116, up from 2,950 in 2009. Show pigs, totaling 2,993, sold for \$750,000, up from the previous year. Feeder pig sales of 14,125 had a gross farm value of \$280,000 in 2010, down from the previous year. Slaughter hog sales in 2010 involved 5,830 head with a gross farm value of \$830,000. This reflected a decrease in the number sold but an increase in value due to an appreciation in hog prices from 2008-2009 levels. There were 1,468 cull animals (sows and boars) sold in 2010, which were valued at \$200,000.

The gross farm value of all classes of swine in 2010 was \$2.1 million. The estimated value added from the swine sector was \$500,000 in 2010, so, when that is added to the gross farm sales, the total value of all swine production in the state was \$2.6 million in 2010.

Exotic Animals

Exotic animal producers had gross farm sales of \$50,600 in 2010, down about \$100,000 during the previous year. Total value of production for exotic animals, including value added, was \$53,130 in 2010.

Fisheries and Wildlife Enterprises

Total farm value of all fish and wildlife enterprises was \$575.1 million in 2010, up 9 percent from \$528.9 million in 2009. Value added was \$381.1 million. Total value of all fisheries and wildlife enterprises to the Louisiana economy was \$956.2 million, up 8 percent from \$882.8 million in 2009.

Aquaculture

Louisiana has long been recognized as supporting one of the most diverse aquaculture industries in the United States. Species and products such as crawfish, catfish, alligators, oysters, tilapia, baitfish, hybrid striped bass, soft shell crawfish and crabs, ornamental fish, baby turtles, a variety of freshwater game fish and other minor species all have been commercialized successfully.

Louisiana's producers continue to lead the nation in crawfish, oyster, pet turtle and alligator sales, and with some exceptions, the state's aquaculture crops exhibited generally upward trends during 2010. Gross farm sales were estimated to be \$252.3 million, up significantly (31 percent) from 2009. Value added to aquaculture products was estimated to be \$164 million, resulting in a total value of \$416.3 million from the aquaculture sector to the state's economy for 2010.

Estimates from the field indicate that farm-raised crawfish production occupied 184,315 acres during the 2009-2010 season, up approximately 10,000 acres from the previous year. According to estimates from the various crawfish-producing parishes, almost 111 million pounds of farm-raised crawfish were sold for \$168.6 million during the 2009-2010 season, making farm-raised crawfish the state's most valuable aquaculture commodity.

Declines in catfish acreage and production continued and accelerated during 2010, not only in Louisiana but throughout the major producing states. Those declines came primarily as a function of increasing costs for feed and energy and continued importation of cheap catfish substitutes from overseas. According to field estimates, Louisiana catfish acreage decreased to 1,334 acres of ponds, but 20 producers still sold almost 5 million pounds of catfish valued at \$3.9 million in 2010.

Following several years of impressive growth in farmed alligator production, industry expansion has reversed in response to the decreased demand for alligator products as both global consolidation of hide markets and the global economic recession continued during 2010. Nonetheless, the 2010 farm-gate value was estimated at \$28.7 million for farm-raised alligators.

Reported pet turtle hatchling production was up slightly during 2010, with sales of almost 2.7 million hatchlings. This increase was the result of several factors, including modest recoveries from extensive damage to facilities and loss of breeding stock caused by Hurricane Gustav in late 2008. Estimated hatchling sales approached \$2.7 million.

Louisiana's bait fish and minnow industries also rebounded sharply during 2010 to \$1.3 million in gross farm value.

Estimated oyster sales of 1.85 million sacks from 803 producers in Louisiana were valued at \$46.5 million, up sharply from the previous year and reflecting ongoing recovery from damage suffered in 2005 from hurricanes Katrina and Rita. The oyster production information reported in this summary represents a one-year lag to avoid estimation and projection errors from using data from only part of the year (meaning figures for oysters reported this year are from 2009). The reason for the lag is that data for oyster sales are compiled and provided by the Louisiana Department of Wildlife and Fisheries to the National Marine Fisheries Service, and the final compilation of the data is not available until the middle of the year following production.

Fisheries

The harvest of freshwater and marine fish and shellfish in Louisiana continues to contribute significantly to the state's economy. Fisheries landings are recorded by two government agencies. The Louisiana Department of Wildlife and Fisheries receives monthly reports from the initial buyers (processors, dealers, etc.), who are required to record every transaction. Species, weight and dockside sales values of the landings are reported for all commercially harvested species.

The National Marine Fisheries Service also is responsible for estimating fisheries landings, using both regional Marine Fisheries Service data collectors and state Wildlife and Fisheries reports. The data reported here are from those two cooperating sources.

The freshwater fisheries and marine fisheries data presented in the report this year (2010) reflect landings from the previous calendar year (2009). The one-year lag is necessary to ensure data accuracy. Real-time reports on fisheries landings are not available until four months after the fact, and final statistics are often six to seven months behind. Estimating landings for the second half of the year based on landings reports from the first half is inaccurate. This method of reporting fisheries landings data has been in place since the 2004 Louisiana Summary; data prior to that volume may not be directly comparable to that reported since 2004 because a different estimation method was used prior to that time. To compare state-level landings for years prior to 2004 on a calendar-year basis, please consult the US-NOAA-NMFS website.

One final caveat is that parish totals for fisheries landings will not equal the state total because of legal confidentiality requirements. When there are fewer than three sources in a parish that report landings of a fisheries commodity in that parish, the number of landings cannot be publicly released by the state Department of Wildlife and Fisheries or the National Marine Fisheries Service without breaking confidentiality requirements. So there may be parishes reported in this volume for which no landings or values were provided by those agencies but for which there was catch. Furthermore, fisheries landings are reported for the parish in which the fish are offloaded – not the parish in which the boat and its crew may be domiciled or the parish where the catches actually were made.

Freshwater Fisheries

Freshwater finfish is constituted primarily of bowfin, catfish, buffalo, shad, gar and carp and is typically less valuable on a per-pound basis than

marine finfish. Total freshwater finfish landings in 2009 decreased in value from 2008 levels to \$2.9 million on 9.4 million pounds sold by 1,236 commercial fishermen.

Catfish are the mainstay of the more valuable freshwater species, and price per pound for catfish remained relatively stable. Sales of catfish caught commercially in Louisiana waters was \$1.4 million on 2.9 million pounds in 2009.

Most wild crawfish are caught in the Atchafalaya Basin, where water levels fluctuate as inflows are controlled at about one-third of the combined flows of the Mississippi River and Red River. Although wild crawfish compete in the marketplace with farm-raised crawfish, some consumers prefer the wild product because of its frequently larger size. The volume of the wild crawfish harvest is almost completely constrained by the timing and duration of the annual winter/spring floodwater event in the Atchafalaya Basin. The 2009 crawfish season was a productive one in the Atchafalaya Basin with prolonged floodwaters increasing production. As a result, freshwater crawfish landings were 16.6 million pounds, up from 15.4 million pounds in 2008 but far less than the 1993 record level of 50 million pounds. Wild crawfish sales were \$13.3 million in 2009, up from \$9.3 million during the previous year. In addition, nearly 395,000 pounds of crawfish were caught in out-of-state waters but sold in Louisiana for \$419,000 in 2009.

Overall, landings from the freshwater fisheries sector in 2009 had a gross value of \$16.2 million. Total value of freshwater fisheries was \$30.0 million when value added from cleaning and processing was included.

Marine Fisheries

Marine finfish landings for food are varied and complex, with about 80 different species being landed and a total of 7.5 million pounds. This was a significant increase from the 2008 level of 6.5 million pounds of marine fisheries landings in Louisiana, which were adversely affected that year by two major hurricanes. In 2009, the top 5 species landed by value, excluding menhaden, were yellowfin tuna, red snapper, black drum, swordfish and king mackerel. Total saltwater finfish landings for food, excluding menhaden, were valued at \$13.2 million in 2009, up significantly from \$11.2 million in 2008.

Landings of menhaden, a low-value but high-volume nonfood finfish species, were 784.9 million pounds in 2009, down from 741 million pounds in 2008. The catch was valued at \$45.7 million, down slightly from \$48.8 million in 2008. Menhaden value decreased during 2009, selling for approximately 5.4 cents per pound. Menhaden oil and meal are sold on the world market for industrial purposes, animal feeds and omega-3 dietary supplements, among other uses, and the prices received for menhaden products are a function of the world supply of oils and meals, particularly those produced by the fisheries for the anchovetta of the Pacific Coast of South America.

Blue crabs constitute nearly all of the Louisiana crab harvest, with stone crab claws making up less than 0.01 percent. Louisiana hard crab landings normally range from 40 to 50 million pounds. In 2009, hardshell blue crabs landings were 47.5 million pounds with a gross value of \$33 million. This was an increase from 43.8 million pounds in 2008 when two hurricanes caused damage to gear and infrastructure.

In 2009, production of softshell crabs (35,484 pounds) and peeler crabs for the shedding business (171,656 pounds) was significantly up from 2008. In 2008, production of softshell crabs (5,900 pounds) and peeler crabs for the shedding business (88,240 pounds) was the lowest ever recorded due to many shoreside shedding facilities being damaged or destroyed by the 2005 and 2008 storms.

Louisiana shrimp landings in 2009 consisted of five species: white shrimp, brown shrimp, seabobs, rock shrimp and pink shrimp. White shrimp historically have provided 50-60 percent of the harvest by weight and around 70 percent by value, but in 2009, white shrimp contributed about 70 percent (79.1 million pounds) of total weight and 78 percent (\$94.2 million) of total value. During 2009, brown shrimp landings totaled 34.5 million pounds with a value of \$26.2 million dockside. The weighted-average price for shrimp was \$1.07 in 2009, down from \$1.46 in 2008 and \$1.26 in 2007.

Overall landings of 107.5 million pounds were up significantly from 89.7 million pounds in 2008, due to both the hurricanes of 2008 and reduction of effort due to overall reduction of profitability in the industry. Shrimp landed in Louisiana had a gross value of \$115 million in 2009, down from 2008. Recovery in landings was seen after extensive damage to the shrimp fleet and infrastructure from the hurricanes of 2005 and 2008, however, but a drop in prices continued to affect both landings and prices in 2008 and was exacerbated by the effects of the 2008 hurricanes. In 2009, marine fisheries landings in Louisiana were valued at \$206.8 million at dockside. Total value of landings in Louisiana, with value added of \$196.5 million, was \$403.3 million in 2009.

Fur

The 2009-2010 harvest of fur animal pelts had a gross farm value of \$49,787. This amount represents fur production only and excludes any value associated with meat production, predominately from raccoon and nutria carcasses.

Animals pelted and sold totaled 10,730, which represented a decrease of nearly 5,000 pelts from the previous year. Most all furbearers had similar numbers trapped during the 2009-2010 harvest as the 2008-2009 one, except for raccoons. Raccoons pelted and sold during the 2008-2009 trapping season numbered 5,299 individuals. The number trapped and pelted during 2009-2010 decreased to 4,755. The average price paid for a single pelt taken during the 2009-2010 trapping season was \$4.64. This varied from a low of 35 cents paid for an opossum pelt to a high of \$21.42 paid for the pelt of a river otter.

Nutria removals in the state, associated with the coastwide nutria control program, accounted for 445,963 animals being taken during 2009-2010. This was an increase from 334,038 nutria removed in this program during the 2008-2009 season. The incentive payment for nutria removal remained \$5 each. Nutria removals outside of those taken under the nutria control program dropped from 6,200 taken the previous season to 2,829 taken this season. The total number and value of all animals removed, included nutria taken under the control program, were 453,864 individuals with a total value of \$2.3 million. Excluding the number of nutria removed under the coastwide nutria control program that were not pelted and sold,

the value-added components raised the total value of furs sold in Louisiana during the 2009-2010 trapping season to \$61,139.

Hunting Lease Enterprises

The value of recreational hunting in Louisiana is expressed through the income derived from hunting lease enterprises. The number of producers who leased land during the 2009-2010 hunting season was 6,833. This figure includes 5,402 individuals who participated in upland game leasing (predominately for deer and turkey) and 1,431 individuals who participated in waterfowl leases. Acreage leased for these operations was 6,271,189 for upland game and 1,723,697 for waterfowl.

During 2010, Louisiana experienced one of the best duck hunting seasons over the past 10 to 15 years. The numbers of ducks in all species were greater over years past, and this translated into more hunters filling their bag limits. The tremendous duck season hunters experienced in 2010 may translate into higher lease rates and more hunters becoming involved with waterfowl hunting activities in 2011.

Average lease rates were \$8 per acre for upland leases and \$24 per acre for waterfowl leases. Leasing rates for upland game varied greatly throughout the state, ranging from \$1 to \$35 per acre. Waterfowl leases averaged \$16 per acre in the coastal areas of the state and \$50 per acre in other areas. In all hunting lease enterprises, rates were dependent on location, habitat quality and species involved. A high demand for a good hunting lease will increase the price or value of that lease. Acreage leased for both upland game and waterfowl were similar to last year's levels, but average lease rates increased slightly – accounting for slightly higher gross farm values for the 2009-2010 hunting season. Gross farm values for these leases were \$50.3 million for upland game and \$43 million for waterfowl. Value-added components raised the total economic contribution of hunting leases in the state for both upland game and waterfowl to more than \$98 million.

Honey

Honey production in 2010 was 1.8 million pounds collected, which was up from 2009 levels. Good to moderate weather conditions allowed honey production during the spring, summer and fall in many areas. But a few areas showed average to lower rates of production due to rain or drought.

Honey prices began 2010 at \$1.05 and went as high as \$1.45 to \$1.60 for water white honey. Prices appear to be on the rise and should stay there through 2011. Total production increased despite a decrease in the total number of colonies to 24,294. This decrease continues a gradual decline in colony numbers over the past three years.

Commercial and hobby beekeepers have continued to develop a large local and statewide clientele – with some having to buy honey to meet demands. This increase in purchasing of local honey from beekeepers and in local stores over the commercial brands has greatly improved the sales and value of Louisiana honey. It has expanded from stores and bakeries to restaurants to coffee houses and out-of-state markets. In many local markets, clientele have increased demand for local or state honey, and storekeepers say local honeys are the most popular.

Primary pest problems for commercial beekeepers continue to be small hive beetles and varroa mites. Wax moths are an added problem for the hobby beekeepers. The stress produced by the mites and hive beetles are good examples of the type of stress exhibited in colonies with colony collapse disorder. Louisiana's beekeepers continued efforts to improve their management techniques and the continued support from the USDA-ARS Bee Breeding and Physiology laboratory in the state have assisted with development of the Russian genetic lines and hive beetle management practices. Colony collapse disorder has not been identified in the state, but the stress factors exerted on colonies have caused concern among some beekeepers.

Wild colonies continue to increase, and the list of beekeepers that collect swarms and remove colonies on the LSU AgCenter website continues to grow. The list is by area of the state and provides names, phone numbers, areas they will cover and, in some cases, their websites.

African honeybee problems have been negligible in Louisiana. The number of infested parishes has remained constant at eight. Cooperation between the beekeepers and the Louisiana Department of Agriculture and Forestry has kept any effects from these invaders to a minimum.

The gross farm value of honey production in Louisiana increased to \$2.6 million in 2010. Value added from cleaning, processing, supplies, packaging and local and state sales in 2010 was \$200,000, so the total value of beekeeping production for 2010 was \$2.8 million. Pollination service provided by honeybees continues to be a valuable commodity to Louisiana crops. Some have estimated these pollination services to be valued at millions of dollars annually. These services include pollination of many vegetables, fruits, nuts, flowers, grasses and other plants that feed wildlife, livestock and people, and the services come in commercial production, home gardens and wild settings.

Plant Enterprises

The total value of all plant enterprises was \$3.262 billion in 2010, an increase of 10 percent from \$2.973 billion in 2009. Value added was \$3.093 billion for all plant commodities. Total value of all plant/crop enterprises to the Louisiana economy was \$6.355 billion in 2010, up 20 percent from \$5.442 billion in 2009.

Cotton

For 2010, the land harvested for cotton was 247,592 acres – an increase over 2009 and a reverse of a trend of the past few years. The 2009 growing season had one of the lowest levels of harvested cotton acreage on record in the state, so the increase in acres was welcome by those in the cotton sector.

Cotton lint yield on irrigated land was 890 pounds per acre compared to 770 pounds per acre in 2009. On nonirrigated land, lint production was 686 pounds per acre, down slightly from 693 pounds per acre in 2009. The number of producers in 2010 was 484, down from 510 producers in 2009. Total lint production in 2010 was 393,352 bales (480 pounds), up from 338,252 bales harvested in 2009 but still only 63 percent of the state's total cotton production in 2007 (634,552 bales).

During 2010, there were 92,876 acres of irrigated cotton and 154,716 acres of nonirrigated cotton. The ratio of irrigated to nonirrigated production acres remained consistent from 2009.

Average value of cotton lint sales was \$602 per acre, which translates to a gross farm value of \$149.1 million for lint production in 2010. Sales of cotton seed contributed an additional \$105 per acre, adding a total of \$25.9 million for cottonseed production. Lint sales were up in 2010, but seed sales were slightly down compared to the prior year, reflecting an increase in turnout at the expense of seed production.

For the first time in three years, cotton producers were able to pick cotton relatively free from detrimental weather events. The cotton crop matured more rapidly than in the past due to a trend toward more mid- and early maturing varieties as opposed to one dominant full-season variety. The rapid accumulation of heat units through June and July also was a key factor in the early harvest. The harvest season was rainfall free overall and allowed growers the opportunity to better time their harvests to allow more bolls to finish development.

Gross farm value for both lint and seed was \$175.1 million, a significant increase (48 percent) over the value of 2009 cotton production. Value added from ginning and processing was \$35.0 million, so the total value of the cotton sector was estimated to be \$210.1 million in 2010.

Feed Grains

In 2010, there were 582,970 acres of feed grains harvested in Louisiana, down from 706,171 acres in 2009. Acres harvested for corn were the greatest of all the feed grains grown in Louisiana – with 498,535 acres of

corn harvested in 2010, down significantly from last year's 620,331 acres. Grain sorghum, with 75,535 acres, was second among feed grains, while oats accounted for 8,573 acres harvested in 2010.

The area planted and harvested for feed grains in the state continued to remain relatively high, by historic standards, primarily due to strong grain prices at planting time. Early season drought conditions and very high temperatures during pollination appeared to have had some negative effect on 2010 yields, but corn yields still were slightly higher than previous year's mark.

Gross farm value of all feed grains in Louisiana was \$310.3 million in 2010, a slight decrease from 2009's sales of \$316 million. With value added of \$46.6 million included, the total value of feed grain production in Louisiana was \$356.9 million for 2010.

Corn

Corn was grown on 1,308 farms in 2010, down from 1,411 farms in 2009. The statewide average yield was 138 bushels per acre in 2010, which was up from the previous year's yield of 122 bushels per acre.

Planting conditions in the spring were moderately favorable during 2010, but northern and central Louisiana experienced dry conditions during spring and early summer that adversely affected dry-land operations, including yields. There were very few quality losses at harvest due to excellent harvest conditions, however. The normal weed, disease and insect problems were experienced in 2010. In addition, Palmer amaranth was classified as the first glyphosate tolerant weed in Louisiana during the year.

Gross value of corn production in 2010 was \$282.7 million, down from \$284.0 million in 2009.

Grain Sorghum

Grain sorghum production during 2010 was lower than 2009 levels. Sorghum was produced on 228 farms and a total of 75,862 acre during 2010, and the average yield was 52 hundredweight per acre.

Production was down from 2009 levels during 2010 due to fewer acres being planted and harvested. Extremely dry conditions at planting affected planting dates for many producers, especially those in northeastern Louisiana.

Gross farm value of sorghum production was \$26.2 million, down from \$31.4 million in 2009.

Oats

Oat production increased to 8,573 acres in Louisiana during 2010, up substantially from 3,651 acres harvested during 2009. Oat yields for 2009 averaged 71 bushels per acre, down from 76 bushels per acre during 2009.

Gross farm value of oat production was \$1.4 million for 2010, more than double the \$600,000 in 2009.

Forestry

The projected Louisiana gross farm value of forest products increased during the 2010 calendar year. This was the first gain following three consecutive years of significant reductions in the forest products sector of Louisiana's economy.

The 2010 total saw-log harvest increased by 62 million board feet (8 percent) to a cut of 811.9 million board feet. The pine saw-timber harvest increased by 9 percent from 2009 levels and posted a total statewide harvest of 691.7 million board feet during 2010. The hardwood saw-timber harvest increased to 120.2 million board feet during 2010, only a 0.2 percent gain. Pine chip-and-saw harvested during 2010 totaled 719,000 cords, an increase of 5 percent from 2009 levels.

The 2010 Louisiana pulpwood harvest was 5.7 million cords, up 274,000 cords (5 percent) from the 2009 harvest. Pine pulpwood harvest increased 6 percent, from 4.3 million cords during 2009 to 4.6 million cords in 2010. Hardwood pulpwood harvest decreased by 163,000 (14 percent), from 1.2 million cords in 2009 to 1.06 million cords in 2010.

Stumpage prices for the period increased from 2009 levels. Pine saw-timber stumpage prices were 4 percent higher during 2010, averaging about \$246 per mbf statewide for the year. Oak saw-timber stumpage prices were 7 percent higher on average around the state during 2010 – at approximately \$258 per mbf for the year. Statewide average pine pulpwood prices increased by 23 percent during 2010. The average statewide pine pulpwood price during 2010 was \$29.13 per cord. Hardwood pulpwood prices were 13 percent higher on average, at \$29.89 per cord. These represent excellent pulpwood stumpage prices. Chip-and-saw prices increased an average of 4 percent this year after decreasing 8 percent during 2009 and stood at a statewide average of approximately \$43.88 per cord during 2010. Delivered prices also were higher for all products except pine pulpwood, which declined by a mere 1 percent. Pine saw-timber average prices were up 9 percent, oak saw-timber up 5 percent, pine chip-and-saw up 3 percent and hardwood pulpwood up 2 percent during 2010.

During the year, Louisiana's private forest landowners received an estimated \$396.8 million from the sale of forest timber, up almost 16 percent from 2009 but still far below annual dollars received during the decades of the 2000s and 1990s. Timber harvesting contractors and their employees earned \$426.6 million from harvesting the trees and moving wood to mills during 2010. This total was up 11 percent from 2009 but still almost 11 percent down from 2008 levels. This income is re-circulated many times throughout the economy and positively affects communities across the state. In addition to the other forest products segments, Christmas tree growers received \$702,000 from the sale of trees during 2010, which was down 36 percent from the previous year.

The payroll and income derived from money generated by the forestry and wood products industry totaled an estimated \$3.09 billion during 2010, an increase of 23 percent from 2009 totals. Although this total is still more than \$620 million lower than it was in 2007, it is a significant increase over 2009's low numbers. The gross farm income produced by all forestry-related products, such as timber, pine straw and Christmas trees, totaled \$824.3 million during 2010. That was up 13 percent from the \$721.4 million

generated in 2009. The value added through further processing and delivery was \$2.3 billion, which was 27 percent higher than 2009's value added. That means a total economic contribution from Louisiana's forest products industries of \$3.1 billion, and those industries remain the state's largest agriculture and natural resource industries.

Fruit Crops

Louisiana's commercial fruit production is diverse, ranging from berries, citrus and peaches to muscadine grapes and mayhaws, among others. Gross farm value of all commercial fruit crops in Louisiana during 2010 was \$26.3 million. Value added contributed \$6.6 million to the total value of fruit production of \$32.9 million for 2010.

Blackberries

Gross farm value of blackberries increased during 2010 and was \$560,000, up slightly from \$370,000 during 2009. Stronger prices during the past year encouraged more entry into blackberry production and resulted in more producers (1,121) and blackberry acres in production (100) during 2010 than the previous year. Average production was up slightly, from 2,335 pints during 2009 to 2,423 pints of blackberries per acre for 2010, and overall production was up to 242,398 pints during 2010.

Blueberries

Blueberries were grown by 1,419 producers on 285 acres. The primary blueberry growing parishes are DeSoto and Washington with 140 acres of the total. Most producers in other parishes grow less than one acre of berries and sell fresh fruit to local clientele. Gross farm value of blueberries during 2010 was \$1.3 million, down slightly from 2009.

Citrus

The Louisiana citrus industry involves 545 growers in 18 parishes who grow 408 acres of navels, 396 acres of satsumas and 41 acres of other types of citrus. Plaquemines Parish is the leading producer of citrus in Louisiana with 525 acres of citrus that had gross farm sales of \$2.4 million in 2010.

Although some is sold through traditional marketing channels, the majority of Louisiana citrus is sold by direct marketing at roadside stands and farmers markets. Peddlers buy citrus on the farms and re-sell it across the state. Growers deliver citrus to grocery store warehouses, individual grocery stores and fruit stands.

Satsumas were grown by 244 producers on 396 acres during 2010. Total satsuma production was 229,258 bushels and those sold for \$5.1 million during 2010. Navel oranges were grown by 173 producers on 408 acres with 98,060 bushels being produced during 2010. Gross farm value of navel orange sales was \$2.2 million. The gross farm value of all citrus production was \$7.5 million for 2010.

Mayhaws

The gross farm value for mayhaws was \$160,000 during 2010. Orchard mayhaw trees produced 138,318 pounds on 141 acres. Some of the orchard mayhaw acreage with older trees is starting to produce yields above 2,000

pounds per acre, but damage from fire blight reduced yield on some trees by more than 50 percent. The registration of streptomycin for use on mayhaws should reduce the fire blight problem. Native mayhaw harvest was light during 2010 – with 453 acres producing 17,567 pounds.

Miscellaneous Fruit

Many miscellaneous fruits were planted as either small commercial plantings or as backyard plantings. These crops include figs, grapes, pears, plums, apples and persimmons. These fruits were planted on approximately 450 acres and had estimated gross farm value of \$1.4 million.

Muscadines

Reports concerning muscadine production were divided into fresh fruit production and commercial production.

Muscadines are grown for fresh fruit on 73 acres by 24 growers in Louisiana. The fruit usually was sold at \$5 to \$12 per gallon with an average of \$10 per gallon. The lower prices generally were used at U-pick operations.

Production for juice and wine was considered commercial muscadine production. Muscadines grown for wine production are concentrated in East Feliciana Parish. Louisiana produced 107 tons of commercial muscadines on 35 acres in 2010.

The total gross farm value of muscadines during 2010 was nearly \$220,000.

Peaches

Gross farm value of peaches during 2010 was \$1.2 million. Peaches are grown on 341 acres by 37 commercial producers. Chill hours for most varieties were adequate for fruit set, but a late freeze did cause minor damage to some varieties.

Strawberries

The Louisiana strawberry industry involves 83 growers who are producing 383 acres of strawberries for a gross farm value of \$15.2 million. Strawberries continue to be the leading fruit crop in the state. Tangipahoa Parish is the leading strawberry-producing parish in the state with 292 acres and \$11.5 million in sales during 2010.

The majority of the Louisiana strawberries are sold by peddlers. Growers also deliver berries to grocery store warehouses, individual grocery stores and fruit stands. The remaining portion of the crop is sold at farmers markets and roadside stands.

Louisiana strawberries are now available in November, December and January. This is due to the use of the variety Strawberry Festival, plug plants from nurseries in Quebec, Canada, row covers and wire hoops. These early berries bring a premium price and play a large part in the high returns for the crop.

Commercial Greenhouse Vegetables

During 2010, 14 parishes had farms commercially growing greenhouse vegetables on 3.4 acres of greenhouse space, up slightly from 2009. All production was devoted to tomatoes during 2010, with all of that sold on

the fresh market, much of it direct-retail at local markets. Energy costs had become a major cost of production during the winter of 2009 and continued to affect production decisions in 2010, although to a lesser extent as energy costs declined.

The estimated gross farm value of Louisiana greenhouse vegetables was nearly \$1.5 million for 2010. Total value of greenhouse produce, including value added, was \$1.7 million.

Hay Sold

Hay production for commercial sales is a limited part of the total hay production in Louisiana, and 2010 was no exception. Nevertheless, hay produced from 377,061 acres of grasslands was sold by 3,546 producers during 2010.

Yields averaged 3 tons per acre from the grasslands harvested for sale during 2010. Production included 1.3 million tons of grass hay. Compared to numbers reported in 2009, the acreage of grasslands used for commercial hay production remained relatively unchanged, as did yields. As a result, the total production of the 2010 hay crop for sale was similar in size to that of the 2009 crop.

Excellent weather conditions persisted throughout much of the state during the spring and summer months, and fall conditions also were favorable for hay production. Some parishes in north Louisiana, however, did experience drought conditions, which negatively influenced hay production in those areas. Many Louisiana hay producers were able to sell their hay into drought-stricken areas such as Texas for a very good price.

Gross farm value of all hay sales, including some minor alfalfa production, was \$142.5 million, which was 21 percent higher than the 2009 crop value of \$117.7 million. Total value of hay production, including value added, was \$158.2 million for 2010.

Hay for all noncommercial purposes was grown on 450,000 acres and produced 2.8 tons per acre for a total production of 1.3 million tons. This production during 2010 was about 18 percent higher than that reported for 2009. The number of acres devoted to hay production increased by 70,000 acres from 2009 to 2010.

Home Vegetable Gardens

Parish reports indicate there were an estimated 294,471 home gardens statewide during 2010. This number is slightly lower than the previous year's estimate. But the number of home gardens fluctuates greatly from year to year with people's interest and the economy.

A survey of Louisiana home gardeners in 2008 showed that the average age of gardeners was 62 years with a median age of 67 years. The median Louisiana garden size was 800 square feet and is calculated to generate produce valued at \$512 per garden. This value was used to calculate the gross farm value of home gardens in Louisiana for 2010.

Vegetable gardening is not only a hobby but also a way of extending the family food budget by freeing up limited funds for other food purchases. The largest concentrations of home gardens were found in Caddo, Calcasieu, East Baton Rouge, Jefferson, Orleans and Terrebonne parishes.

The 2010 gross farm value of home vegetable gardens in Louisiana was estimated to be \$150.8 million.

Nursery Crops

Commercial nursery crop production in Louisiana had a gross farm value of \$78.3 million for 2010. This was 5 percent lower than 2009 production and follows a 27 percent reduction from 2008 to 2009.

Wholesale production was \$3.1 million for the growers of fruit and nut tree nursery stock. Foliage plants had \$2.8 million in gross farm-gate value in Louisiana during 2010. The largest segment of the nursery industry continues to be woody ornamentals (trees and shrubs). Woody ornamental growers sold products worth \$57.6 million during 2010 at the wholesale level. Bedding plant and floriculture crop production was up significantly during 2010 with a gross farm-gate value of \$14.8 million.

Including value added of \$39.9 million, the total value of the Louisiana nursery industry at the wholesale level was \$118.2 million for 2010.

Other Oilseeds

During 2010, 64 acres of sunflowers were harvested and sold for commercial processing at a value of \$18,272, down substantially 2009. Total value of other oilseed production, including value added, was \$19,186 in 2010.

Peanuts

During 2010, 360 acres of peanuts were harvested, which was up from 243 acres from 2009. Production of 1.4 million pounds of peanuts sold for commercial processing at \$300,000, a significant increase over 2009's production and sales of \$43,679. Favorable weather conditions throughout the growing season and at harvest contributed to the increase in production and gross farm value.

Pecans

The state's pecan crop estimates during the summer ranged from 8 million to 9 million pounds, approximately 26-33 percent below the 10-year average (2000-2009) of 12.1 million pounds per year.

Scab pressure was moderate during midseason, but pressure disappeared as the drought intensified late in the season, resulting in an easily manageable problem if a good spray program was maintained. Insect pressure was sporadic, with no significant losses being attributed to a specific insect statewide.

Much of the state reported drought conditions during late summer. At the LSU AgCenter's Pecan Research/Extension Station in northwest Louisiana, rainfall was below normal every month from April through October except the month of July in which there was 3.96 inches (average rainfall is 3.99 inches for July). August through October are crucial months for adequate moisture in pecan production for both kernel quality and shuck split. During that period, however, the station received only 3.11 inches instead of the average expected amount of 10.37 inches. Because of the

drought, above normal rainfall in November did not hamper harvesting efforts. There were some crop losses because of stick-tights, especially in the Stuart variety, but overall the crop quality was good. Southern Louisiana, especially Pointe Coupee Parish, is still recovering from major structural damage to the trees by hurricanes Gustav and Ike in 2008, but production has been increasing annually.

Input from growers, county agents and accumulators estimate the 2010 Louisiana pecan crop at approximately 12.8 million pounds, consisting of 4.6 million pound of improved varieties and 8.3 million pounds of native pecans. During 2010, an estimated 9,539 acres of improved pecans and 15,816 acres of native pecans were harvested by more than 9,000 growers. Wholesale prices in Louisiana for natives averaged \$1.30 per pound, while improved pecans averaged \$2 per pound. There was considerable variability in prices due to quality, location, time of sale and quantity of pecans sold.

The gross farm value of Louisiana pecans was estimated to be \$19.9 million for 2010. Total value of pecan production, including value added, was estimated to be \$24.8 million for 2010.

Rice

Rice acreage in Louisiana increased substantially from 458,204 acres in 2009 to 537,147 acres in 2010. The increase was driven by firm prices for rice at planting and corresponding lower prices for cotton and corn from 2009 levels. Most of the increase occurred in northeast Louisiana where land was shifted from those commodities to rice. Poor weather at harvest during the fall of 2009 also contributed to the acreage shift since farmers found rice to be more tolerant of the unfavorable conditions than corn or cotton.

In spite of lower yields in most of the state, several key parishes in the northeastern area reported exceptional yields – resulting in higher-than-expected state yield. The state average of 6,567 pounds per acre surpassed the record 6,515 pounds per acre harvested in 2007. About 19 percent of the acreage was planted to hybrid varieties and 70 percent to Clearfield varieties. Some of the higher state yields also can be attributed to the increase in hybrid acreage. Very high temperatures during flowering caused reduced yields in many of the southwestern parishes, but conditions were ideal for ratoon crop production. Had prices been more favorable at the time of first crop harvest, more growers would have produced a second crop. Disappointing prices early on discouraged many from attempting a second crop, however.

The Louisiana rice crop was harvested by 1,083 producers. The gross farm value was \$411.5 million in 2010, \$12.6 million higher than the year before. The increased acreage and higher yields accounted for this increase. Value added brought the total value of rice production to \$535 million for 2010.

Rebounding cotton and corn prices combined with steady to lower rice prices is likely to result in fewer rice acres planted in 2011 than in 2010. Hybrid rice acres probably will increase, while Clearfield rice acres will remain about the same or increase slightly.

Sod and Turfgrass Production

During 2010, 20 Louisiana sod farms cultivated 4,085 acres of fine turfgrasses. About 60 percent of the turf sod acreage in Louisiana is centipede grass and about one-third St. Augustine grass. The remaining acreage is divided among Bermuda grass and zoysia grass. Sod acreage reported was down by from 5,204 acres in production in 2009. The decreased acreage could be attributed to a reduction in the number of sod farms – from 27 in 2009 to 20 for 2010.

The economic downturn continued to hamper sod sales during 2010. New construction softened, and the effects of the recession had more of an influence on local and state economies. Shipping costs increased slightly toward the end of the year as fuel cost inched upward. Nonetheless, local sod is still more cost-competitive since shipping has always been a major component of consumer sod cost. There is some optimism because the economy appears to be improving in 2011, but markets for turfgrass are expected to improve only as construction increases.

Gross farm value of sod and turfgrass sales was estimated to be \$20.4 million for 2010. Gross farm value was reduced 19 percent from 2009, reflecting the loss of sod farmers and acreage. Value added for turfgrass production was \$15.3 million, so the total value of sod and turfgrass production in Louisiana during 2010 was \$35.7 million.

Soybeans

Soybeans were harvested from 1 million acres by 2,198 producers during 2010, with a statewide average yield of 43 bushels per acre. Yields improved from the previous year by 9 bushels per acre, and total production of 43 million bushels was one of the highest on record in Louisiana.

Statewide, producers faced an early drought that delayed planting. The usual weed, disease and insect problems were present during 2010, but a relatively new pest, the red banded stink bug, became an insect problem for soybean producers in Louisiana. Asian soybean rust continues to be a threat in Louisiana, although its presence so far has not resulted in major yield losses. Cold temperatures during winter were credited with reduced stink bug numbers and no reports of Asian soybean rust. Excellent weather conditions during harvest contributed to the high yields and excellent quality of the harvested soybeans.

Gross farm value of soybeans in Louisiana was \$424.3 million for 2010, a 26 percent increase over 2009's sales of \$335.6 million. Value added to soybean production was \$42.4 million, which brought the total value of Louisiana soybean production to \$466.8 million for 2010.

Sugarcane

During 2010, sugarcane was grown on 421,298 acres (a slight increase from the 2009 crop) in 23 Louisiana parishes. An estimated 392,829 acres (an increase of 2,121 acres or 0.5 percent) were available for harvest for sugar, assuming that 6.5 percent of the total acres were used for seed cane.

The 11 operating factories in the state processed nearly 12.2 million tons of cane (a decrease of 2.8 million tons or 20 percent from 2009 levels).

In total, the 11 factories produced 1.4 million short tons of sugar (96 pol), which was a decrease of 80,000 tons or 5.4 percent when compared to 2009.

The average yield of cane produced per total acre was 29 tons for 2010 (a decrease of 4.4 tons or 13.2 percent from 2009). The average yield of cane produced from each harvested acre amounted to 31.1 tons (a decrease of 4.7 tons or 13.1 percent). The average sugar recovery at the 11 factories was 11.3 percent or 226 pounds of sugar (96 pol) per ton of cane; this was an increase of 22 pounds of sugar per ton of cane or an increase of 9 percent when compared to the 2009 crop. The yield of commercially recoverable sugar produced per total acre averaged 6,563 pounds (a decrease of 251 pounds or 3.7 percent). The yield of commercially recoverable sugar produced per harvested acre was approximately 7,019 pounds (a decrease of 284 pounds or 4 percent).

Although the pricing period is not complete for the 2010 crop, sugar prices remained high for most of the year, with the average predicted value for raw sugar at 28 cents per pound, an increase of 4.9 cents per pound or 21 percent more than the 2009 price. Molasses prices have remained high, although the price has dropped from last year, and should average about \$100 per short ton at 79.5 Brix or 58 cents per gallon, a decrease of 11.7 cents per gallon or 17 percent relative to 2009 levels.

The gross farm value of the 2010 sugarcane crop was \$503 million for sugar and molasses (an increase of \$56 million or 13 percent from the 2009 crop). The gross farm value reported represents 60 percent of the value of the sugar and 50 percent of the value of molasses produced. The remaining percentages are for processing and marketing, which amounted to \$344 million. The total value of the sugarcane crop to Louisiana producers, processors and landlords at the first processing level actually was \$847 million, an increase of \$95 million or 13 percent when compared to the 2009 crop. Sugarcane continues to rank first in value among the state's row crops and third of all commodities in Louisiana.

Cane yield for the 2010 crop was lower than the 2009 crop. Lower tonnage was likely the result of damage from the wet harvest of 2009 followed by a cold winter and spring. On the other hand, recoverable sugar per ton of cane was excellent and partially offset the lower cane yield. The yield of sugar per acre was the fifth best in the history of the Louisiana industry and well within a five-year average for the state.

Sugarcane acreage in Louisiana for 2010 was similar to the acreage reported for 2009. Production acreage continues to be lost to urban encroachment. With higher sugar prices, more acres were planted in the northern part of the sugarcane area (Avoyelles, Rapides and Pointe Coupee parishes).

The 2010 sugarcane variety census showed Louisiana producers continued to rely primarily on HoCP 96-540, which was grown on 48 percent of the production acres. This was followed by L 99-226 (16.9 percent), L 97-128 (11.2 percent), L 99-233 (9.8 percent), HoCP 00-950 (4.2 percent) and L 01-283 (4.1 percent). Acreage devoted to LCP 85-384 and Ho 95-988 continued to decrease. L 01-299 and L 03-371 were released in 2009 and 2010, respectively, and increased on most farms.

Weather records showed the average temperatures across the sugarcane belt were considerably below average from January through early April of

2010. In fact, it was the coldest winter since 1951. In addition, rainfall also was above average during that time frame. From May through August, temperatures warmed and timely rains occurred for most areas of the state. The crop responded to excellent growing conditions during its grand growth phase and exceeded the expectations of many. Dry weather returned from September through most of the fall, which made for excellent harvesting conditions. Although some late-planted cane was adversely affected by the dry conditions, the majority of the planted cane in 2010 was in excellent shape.

Because of new fertilizer recommendations that reduce nitrogen rates by 20 to 30 percent and the high cost of fertilizer, in general, many producers continued to use less nitrogen during 2010 than was used in past years. Undoubtedly, the lower rates of nitrogen helped to improve the natural maturity of the crop. Producers also applied little to no phosphorus and potassium due to high costs.

Sugar yield at the beginning of the harvest was low as growers harvested their older stubble crops and heavy clay land first. With higher prices forecasted for the 2010 crop, many growers kept a higher percentage of their stubble crop than normal, even though the cane stands in the spring were not up to par. Sugar recoveries were excellent, and very little field soil (mud) and trash were brought to the factories. Also, the crop was fairly erect in 2010, and growers were also able to top a majority of their sugarcane during harvest. Although natural ripening was excellent, ripeners were widely used, and the crop responded well to artificial ripening. The dry weather contributed to lowering both harvesting and processing costs.

The 11 factories processed much lower tonnages compared to 2009, and all factories closed much earlier than in previous years. The first factory closed on Dec. 14, 2010, and the last factory closed on Jan. 3, 2011. On Dec. 14, 2010, and Dec. 15, 2010, prolonged, below-freezing temperatures occurred throughout Louisiana. The more northern and eastern growing areas recorded temperatures as low as 25 F for several hours. The low temperatures experienced in the western area were not as low as those seen in the northern and eastern areas. Fortunately, the earlier closing of most factories minimized the harmful effects of this freeze, although there were some losses of both tonnage and sugar recovery as a result of the freezing temperatures. It was noted that only a few freeze cracks within stalks occurred in isolated areas during this period. With freeze cracks, significant deterioration in cane quality would occur within one week following such a freeze.

Sweet Potatoes

Louisiana sweet potato producers harvested a slightly above average crop during 2010. Average yield for Louisiana in 2010 was 376 bushels per acre. The 14,000 acres planted for 2010 represented a total slightly higher than that planted in 2009. Louisiana remained fourth in planted acreage in the United States for 2010 – behind North Carolina, Mississippi and California.

In contrast to the 2008 and 2009 production seasons, Louisiana producers experienced a “good” year in 2010. Sweet potato producers needed to harvest 100 percent of the crop during 2010 to begin recouping some of the losses experienced in 2008 and 2009 as a result of hurricanes and late-

season rain events. Harvested acres for 2010 were estimated to be 12,940 for both fresh and canning markets.

Average to above average yields were reported by most producers for 2010. Production was much improved and is estimated at 4.9 million bushels, a 35 percent increase from the 2009 crop. The average FOB price received for the 2010 calendar year was \$18 for a 40-pound box (about \$45 per cwt) for U.S. No. 1s. Processors paid an average price of \$10 per 40-pound box (about \$22 per cwt) for U.S. No. 2s and Jumbos in 2010.

Total gross farm value for sweet potatoes for 2010 is estimated at \$82 million. This is substantially higher than the values realized in 2008 and 2009. Total value of sweet potato production, including value added, was \$141.9 million.

The majority of the crop was planted early, and with a few exceptions most producers had a strong plant stand. Conditions were ideal for planting early in most areas, while other areas were dry, particularly later in the planting season. Growers with irrigation capabilities used irrigation before and after transplanting to aid in transplant survivability and to improve overall stands. Producers dealt with extreme heat and drought conditions through much of the season, and the harvest season was delayed by two to four weeks since most producers were waiting on the crop to size up. Producers in Avoyelles Parish received excessive rain (10-12 inches), however, in early August and that negatively affected the yields realized in that area. Insect pressure throughout the production season was minimal, but late-season sugarcane beetle damage was excessive this year. Some producers reported losses exceeding \$500,000 from damage caused by this insect. Production and packing costs were estimated to be \$3,000 to \$3,500 per acre.

A year-round market has developed in recent years, and producers, shippers and brokers are interested in maintaining a year-round supply to meet their buyer's needs. In addition to the fresh market demand, there also has been an increase in processed consumer friendly sweet potato products in recent years, such as sweet potato fries, canned sweet potatoes and sweet potato chips and cookies. Growth in value-added use and markets for producers is expected to result in significant acreage increases in Louisiana and across the southeastern United States during the coming years.

Vegetables, Commercial

The Louisiana vegetable industry is incredibly diverse and involves 3,736 growers and 33 different vegetable crops grown on 10,634 acres for a gross farm value of \$59 million during 2010.

The majority of the vegetable crops grown in Louisiana are sold by direct marketing at farmers markets and roadside stands. Direct marketing offers the producers an opportunity to sell at a retail price – but with some handling and marketing risk. The development of more than 140 farmers markets in Louisiana has greatly enhanced the marketing and value of vegetable crops harvested and sold by Louisiana producers.

The remainders of the vegetable crops are delivered to grocery store warehouses, individual grocery stores and fruit and vegetable stands. Most of the watermelons grown in the state are sold to peddlers, and only a small percentage is sold to the wholesale markets. Watermelons constitute one-

third of the acreage devoted to vegetable production in Louisiana. Gross farm value of watermelon production for 2010 was \$10.4 million.

Tomatoes (645 acres) at \$15 million and watermelons (3,500 acres) at \$10.4 million were the two leading vegetable crops in the state. Southern peas (2,250 acres) with \$5.5 million in sales, peppers (202 acres) with \$5 million in sales and cabbage (256 acres) at \$5.5 million in gross farm value rounded out the top five vegetable crops for 2010.

Tangipahoa Parish is the leading producer of vegetable crops in the state with a gross farm value of \$11 million in that parish. The leading crops in Tangipahoa are tomatoes, peppers, cabbage and cucumbers.

The gross farm value of all commercial vegetable sales in the state was \$59 million during 2010. Combined with value added (\$88.6 million), the total value of Louisiana commercial vegetable production for 2010 was \$147.7 million.

Wheat

Wheat was harvested from 108,249 acres by 389 producers during 2010 (which was just 65 percent of the 185,542 acres harvested in 2009). The relatively low prices received for wheat during 2010 were the primary cause for this large decrease in wheat acreage.

Yields for 2010 averaged 55 bushels per acre, which was similar to the average yield reported in 2009. Total production was nearly 6 million bushels, which was significantly lower than the 10.6 million bushels harvested in 2009.

The gross farm value of the 2010 Louisiana wheat crop was \$31.6 million, which was significantly lower (40 percent lower) than the 2009 crop valued at \$52.6 million. This large decrease in gross farm value of the wheat crop was due to the unfavorable prices received and the decreased wheat acreage. Value added for wheat production was \$3.5 million, which resulted in a total value of production for Louisiana wheat of \$35.1 million for 2010.

** The marine, freshwater and oyster data presented here are for the year 2009 rather than 2010. Release of fisheries landings data by the collecting agencies occurs 4-5 months after the fact. Another reporting system was used in previous years, so this year's data are not directly comparable to that of previous years.

** The marine, freshwater and oyster data presented here are for the year 2009 rather than 2010. Release of fisheries landings data by the collecting agencies occurs 4-5 months after the fact. Another reporting system was used in previous years, so this year's data are not directly comparable to that of previous years.

** The marine, freshwater and oyster data presented here are for the year 2009 rather than 2010. Release of fisheries landings data by the collecting agencies occurs 4-5 months after the fact. Another reporting system was used in previous years, so this year's data are not directly comparable to that of previous years.

** The marine, freshwater and oyster data presented here are for the year 2009 rather than 2010. Release of fisheries landings data by the collecting agencies occurs 4-5 months after the fact. Another reporting system was used in previous years, so this year's data are not directly comparable to that of previous years.

** The marine, freshwater and oyster data presented here are for the year 2009 rather than 2010. Release of fisheries landings data by the collecting agencies occurs 4-5 months after the fact. Another reporting system was used in previous years, so this year's data are not directly comparable to that of previous years.

PRICES OF COMMODITY PRODUCTS

The gross farm value of the commodities reported in the parish tables was computed based upon estimated annual per-unit prices. The state average prices listed below were used for most parishes for most commodities. However, a parish price was used if the parish price was significantly different from the state price.

PLANT ENTERPRISES COMMODITIES
