## AGRICULTURE & NATURAL RESOURCES

2020

## Agriculture: Backbone of Louisiana's Economy

This publication tabulates the value of Louisiana agriculture in 2020. Agents and specialists of the Louisiana Cooperative Extension Service, as well as other agencies – both private and public – compiled the data. Their analysis focuses on the animal, forestry, fisheries, plant and wildlife commodities that comprise our vital agricultural industry. Agricultural and natural resource industries contribute significantly to our state's economy with the potential for increased economic benefits and job creation through value-added processing in urban and rural communities throughout Louisiana.

The food and fiber sector faced a significant number of issues and challenges during the 2020 calendar year. The year started out with the emergence of COVID-19 and quickly developed into a pandemic. This created significant uncertainty in markets for most food and fiber markets as shutdowns and disruptions in processing and movement of commodities through normal marketing channels impacted supplies as well as overall demand. For those commodities which rely heavily on away-from-home consumption as a large portion of their overall demand, forced shutdowns to restaurants and other food service operations significantly impacted demand and product movement. For other commodities, forced quarantines caused disruption in processing and shipment of products which impacted both available supplies and overall demand. While all agricultural commodities faced some level of impact from the uncertainty and disruptions caused by the pandemic, the commodities in the state that were likely most heavily impacted were seafood, crawfish, poultry, beef cattle, and dairy. Again, these commodities rely heavily on restaurants and food service as a significant component of their overall demand. In addition, shutdown of major processing facilities for poultry and beef due to forced quarantine significantly disrupted normal operation of marketing channels. Fortunately, federal assistance was made available to commodities impacted by COVID-19 to help limit the financial impacts and maintain those industries.

If dealing with a major pandemic was not enough, the state was also hit by three hurricanes during a period from August to October 2020. Hurricane Laura hit the state in August 2020 as a Category 4 hurricane in the southwest corner of the state and then tracked the western edge of the state, maintaining hurricane force winds to the Arkansas-Louisiana line. In early October 2020, Hurricane Delta hit the state as a Category 2 hurricane in nearly the identical location as Hurricane Laura but then tracked to the central part of the state before taking an easterly turn. Finally, in late October 2020, Hurricane Zeta hit the state as a Category 2 hurricane in the southeastern portion of the state before tracking along with southeastern edge of the state. Each of the storms created different impacts for the food and fiber sector. While there were some impacts to yield and production to certain commodities from Hurricanes Laura and Delta, the biggest impact from these two storms was the amount of damage to infrastructure across the entire food and fiber sector. In addition, the timber industry saw significant damage as high winds downed a large volume of timber throughout the paths of both storms. For Hurricane Zeta, given its path through the state and its quick movement, damage was much more limited with the largest impacts likely to the fisheries sector.

Despite the issues and challenges created by the pandemic and the storms, food and fiber production in the state continued to march forward. As indicated, while the storms caused significant damage to infrastructure, they caused relatively minimal damage to yields and production, particularly considering the size and nature of the storms. Prior to the storms, weather conditions were generally favorable for agricultural production and relatively favorable conditions after the storms and through harvest for many commodities helped limit the overall impact on agricultural production. In fact, given the improved weather conditions during the growing season and harvest as compared to the previous year, there were several commodities that experienced year-over-year increases in yields. Yields in 2020 were reported higher for all of the feed grains, rice, soybeans, and sugarcane. For other commodities like cotton and sweet potatoes that did not experience year-over-year increases, yields in 2020 were still close to the previous year and certainly in line with 5 year and 10 year averages.

As seen with production levels, commodity prices for many of the major row crop commodities were either steady or higher than the previous year despite the uncertainty and market volatility created by the pandemic and, to some extent, by the storms in 2020. Much of the year-over-year increase in commodity prices is likely explained by the low prices experienced in 2019. While the pandemic and storms likely had negative impacts for price movement, prices were still able to surpass the low levels experienced in 2019. Also, as different parts of the world implemented stricter policies and

protocols for managing COVID and as international trade flows became disrupted, it allowed for some opportunities for the United States to gain export share of certain commodities and supported prices. For some commodities, like rice, sharp increases in domestic demand were seen as consumers were forced to have more of their food consumption at home and incorporated more rice into their meals. And general inflationary conditions in the US economy that started to materialize in 2020 likely helped to also push prices for some commodities higher. Prices for rice, soybeans, grain sorghum, sugarcane, and sweet potatoes all increased in 2020. Prices for many of the fruit and vegetable commodities were also higher as in-home consumption and demand for those products rose due to the pandemic. Prices for corn, cotton, and wheat were all lower in 2020 versus 2019 but the decrease in prices were relatively minimal for those commodities.

Prices in for the livestock sector were mixed in 2020. Beef cattle, sheep, and goats all experienced year-over-year increases across all classes. For those commodities, supply and demand dynamics heading into 2020 all pointed to higher prices. And while those markets were certainly negatively impacted by the pandemic, the strong supply and demand situation heading into the year helped to counteract those negative impacts and still generate year-over-year increases. Prices for other livestock commodities, like broilers and swine, were not as fortunate and experienced year-over-year decreases. For those commodities, the disruptions caused by the pandemic along with some already concerning supply and demand dynamics helped to push prices down. For other commodities like horses, prices remained stable in 2020 versus the previous year.

Prices for the fisheries and wildlife enterprises were also mixed. Fisheries prices for shrimp and wild caught crawfish, were up significantly from the previous year while prices for oysters and soft-shell crabs were up marginally. Prices for crabs, freshwater fish, and menhaden were down from the previous year. It should be noted that production and prices reported for fishery commodities have a one-year lag. So, prices and production reported are for the 2019 production season and do not reflect the impact of the pandemic. Farm raised crawfish prices were down in 2020 from the previous year as impacts from the pandemic impacted not only the level of production that producers were able to market but also the prices they received. Prices for both farm raised and wild alligators were also slightly down in 2020. It should be noted that alligator prices are now reported on a price per alligator basis versus previous reports which reported prices on a price per foot basis. Changes in the manner in which alligator information is collected and received by the Louisiana Department of Wildlife and Fisheries necessitated a change in the units in which alligator prices are reported. In both cases, however, softness in the demand and market for hides resulted in slightly lower overall values for alligators harvested in 2020. Finally, reductions in the price for fur animals and honey were also experienced in 2020 as overall demand and interest in those commodities decreased slightly in 2020.

As is the case in most years, there are some commodities in 2020 that performed well both from a production and price standpoint and other commodities that faced significant challenges. This resulted in total gross farm values for different commodities and different commodity groups to vary significantly. Total gross farm value across all plant enterprises was up (4 percent) from the previous year. Steady to slightly higher yields for most commodities along with improved prices help to offset the slight reduction in total forestry values experienced in 2020. Gross farm value across all fisheries and wildlife enterprises was down nearly 9 percent from the previous year. Despite prices being up for many fishery commodities, lower catch levels helped to bring the total gross farm value down in 2020. Finally, the gross farm value across all livestock enterprises saw a 3 percent decrease from the previous year. Impacts from the pandemic along with lower overall production and sales were the primary factors resulting in lower gross farm value.

When the commodities produced by agricultural producers are cleaned, processed, and packaged at the next stages of the marketing channel, these value-added activities create additional economic activity over and above that defined by the gross farm value. In 2020, these value-added activities were estimated to have an additional economic impact of \$4.97 billion. Taken together, the gross farm value and value-added activities were estimated to have a total economic impact of nearly \$10.91 billion. This represents a 2.21 percent decrease from 2019. Given the level of economic activity that the state's agriculture, forestry, and fishery industries continue to generate each year, it is undeniable that they continue to be major contributors to the overall state's economy. Cutting-edge research programs and extension education and outreach efforts of the LSU AgCenter remain critical to sustaining these economic benefits.

Many Louisiana communities depend on agriculture, forestry, fisheries and wildlife for local jobs and their economic well-being. However, for those who work in it day in and day out, agriculture, forestry and fisheries are far more than a business, a major job contributor and an economic engine. It truly is a way of life. Families have lived on many of these farms, forest lands or fishing villages for generations following a preferred way of life even though it means hard work, many hours, high risks and sometimes low incomes.

Each new production season has risks associated with commodity prices, trade agreements and higher input costs as well as uncertainty related to the weather. These conditions make the discovery and adoption of new agricultural technology developed by the LSU AgCenter more important than ever to our state's producers. Agriculture is a highly

sophisticated segment of the national and world economy, becoming increasingly so every year. That is the reason we at the LSU AgCenter continue to support agriculture and consumers with factual information provided by a well-trained faculty of extension agents, specialists and research scientists.

Those of us in the LSU AgCenter, with its major branches of the Louisiana Cooperative Extension Service and the Louisiana Agricultural Experiment Station, are proud to be part of Louisiana's agricultural industry, and we are committed to serving that industry and the citizens across the state of Louisiana in the years ahead.

# Louisiana Summary

## Agricultural and Natural Resources

---

### 2020

---

The statistical information in this summary was compiled from estimates made by extension agents of the LSU AgCenter after consulting with agricultural agency representatives, agricultural and agribusiness leaders and others and after study of various reports and resource materials. State specialists with the LSU AgCenter checked parish-level data for specific commodities to ensure accuracy and consistency of all production information. Final review of data was conducted by LSU AgCenter agricultural economist and project director Dr. Kurt Guidry in consultation with external sources, including state and federal statistical agencies. Any inquiries about the data in this publication should be directed to Dr. Kurt Guidry in the LSU AgCenter's Department of Agricultural Economics who oversees the process of gathering all information for the Louisiana Summary.

Although this material is reasonably accurate and can be used for planning and other general informational purposes, this is not the official document of agricultural data for the state. Official statistical data are gathered, summarized and published by the U.S. Department of Agriculture's National Agricultural Statistics Service, Delta Regional Field Office, 10800 Financial Centre Parkway, Suite 110, Little Rock, Arkansas, 72211. Reproduction or publication of information in this summary should acknowledge the Louisiana Summary as the source but indicate the unofficial nature of the statistics.

Gross farm value was calculated for each commodity, which in some cases included a value from natural resources and consequently may not represent income to farmers. Gross farm values were calculated using calendar-year, market-weighted, state-level average prices, when available. When state-level price information was unavailable, price information was used from adjacent states (Texas, Arkansas, or Mississippi) or the nation. Primary sources for prices were: USDA National Agricultural Statistics Service, USDA Agricultural Marketing Service, and USDA Economic Research Service. The gross farm value is an indicator of the commodity's contribution to economic activity in the state but was not an indicator of farm profits. Production costs greatly affect profit (or loss) for all commodities. Even when gross income increases over previous years, corresponding increases in production costs may decrease farm profits.

In the state summaries, the value added in cleaning, processing, packaging, marketing, and transporting commodities was an estimate of the total contribution of agriculture and natural resources to the state's economy. The state summary may not be an exact summation of all parish reports as adjustments may occur due to changes in average prices received or to accommodate information from other sources. In each parish table only commodities that were of commercial economic value in that parish this year were listed. In some instances, the number of producers or the number of acres in a parish were not available. An asterisk was used to avoid releasing confidential information when too few producers were present for that commodity. Within some commodity groups, such as grains, fruits and commercial vegetables, the total number of producers has been omitted because some producers grow several different crops within the group. Adding together the producers of individual crops would not give a true total for the group.

#### **NEW FOR 2020**

The units at which the prices for both farm raised and wild caught alligators are reported in this report have changed from a price per foot in previous reports to a price per alligator. This change was necessary based on a change in how the information on alligator production and value is received from the Louisiana Department of Wildlife and Fisheries.

# Animal Enterprises

---

Gross farm income for all animal enterprises was over \$1.59 billion for 2020, down 3.1 percent from \$1.64 billion in 2019. Value added was over \$925.3 million for 2020, down from \$1.03 billion in 2019. Total value of all animal enterprises in the Louisiana economy was \$2.51 billion, down 5.7 percent from \$2.67 billion in 2019.

---

## Beef Cattle

Agreeing with historical cyclical trends seen in US beef cattle inventories, the Louisiana beef cattle industry has seen marginal decreases in beef cow numbers in 2020. Total beef cow inventory numbers decreased in 2020 totaling an estimated 558,560 head, down from 589,845 in 2019. The 2020 production year was met with several challenges to the beef cattle industry. To start, the 2019 production year concluded with significant shocks to the market and significant downward pressure on prices. This was met by supply chain disruptions early in 2020 which led to a subsequent impact on marketing channels. Additionally, a record hurricane season for Louisiana compounded the disturbances placed on the industry.

The cyclical expansion seen in the US beef cattle inventory from 2014 to 2019 was met with a modest liquidation in beef cattle numbers during 2020. This is congruent with the normal ten-year beef cattle cycle. A slight decline in Louisiana's beef cattle inventory reflects this nationwide trend. Historical declines in the US beef cattle inventories have been largely due to changes in calf prices and significant weather conditions. This was evidenced in the 2020 production year for Louisiana beef cattle producers by slightly increased prices and multiple catastrophic hurricanes. It should also be noted that market channel disruptions impacted availability and price of beef for consumers which consequently continued to increase the interest in locally grown foods that has swept the country over the past few years. This has seemed to further increase the interest in agricultural production and, particularly, beef cattle production by individuals not traditionally tied to agriculture.

Louisiana remains primarily a cow-calf industry with most of the cattle marketed in the year being calves weighing less than 700 pounds. Of the total estimated 562,984 head of beef cattle marketed in 2020, nearly 69% were steer and heifer calves weighing less than 700 pounds. The gross farm value of 207,055 steer calves sold in 2020 was \$136.5 million, an increase of roughly \$4.3 million from the \$132.2 million reported in 2019. The gross farm value of 179,584 heifers sold in 2020 was \$101.8 million, a decrease of roughly \$1.8 million from the \$103.6 million reported in 2019.

In 2020, 51,914 yearling cattle (600-800 pounds each) sold for \$39.5 million, a decrease of roughly 2,629 head and \$0.6 million from 2019 levels. The number of cow-calf pairs sold in 2020 was reported at 47,053, up roughly 320 pairs from 2019. The small increase in the number of cow-calf pairs sold took advantage of slightly higher prices compared to 2019, leaving the gross farm value increased by \$5.7 million at \$48.1 million in 2020. Finally, gross farm values income for cull cows was \$29.1 million, an increase of \$10.7 compared to 2019. This reflects both the start of a cyclic decline in beef cow numbers and marginally higher prices compared to 2019. Comparably, the value for cull bulls was seemingly unchanged at \$7.7 million compared with \$7.8 million in 2019.

When added across all classes of beef cattle, the total gross farm value generated by the beef cattle industry in 2020 was estimated at \$362.8 million, up roughly \$18.3 million from 2019. This is indicative of marginally higher prices compared to 2019, as well as the beginning of a cyclical decrease in herd size throughout the country. Higher prices combined with increased cattle marketings helped raise total gross farm value somewhat from the previous year. When value-added activities of \$45.3 million are added to gross farm income, the total economic impact of the beef industry in Louisiana during 2020 was estimated at \$408.1 million.

---

# Animal Enterprises

---

## Dairy

Milk production was reported by 8 parishes in 2019. Three parishes in the southeastern part of the state and one parish in the northwestern part accounted for over 90% of the herds, cows and milk produced. The number of dairy farms declined from 80 in 2019 to 75 in 2020. The number of milking cows decreased from 9,357 head in 2019 to 8,930 head in 2020. Total milk production decreased from 141.2 million pounds in 2019 to 132.1 million pounds in 2020. Due to a nearly 9.9-million-pound reduction in milk production in 2020 and a 2.76 percent decrease in milk prices, on-farm value of milk was reduced by almost \$2.5 million.

The value of cull cows, bred heifers, mature cows, breeding age bulls and calves was about \$2.4 million. The total value of milk and animal sales to Louisiana dairy producers was \$26.1 million. Value added contributed nearly \$41.9 million more. The total economic contribution from dairying in Louisiana, including milk sales, animal sales and additional processing was \$68.1 million, a decrease of \$10.4 million compared to the previous year.

Another component to the state's dairy industry has been the production of goat's milk. While small compared to the dairy cattle industry, dairy goat production has continued to be a viable industry in the state. In 2020, dairy goats were raised by 49 producers. A total of 546 does were reported to have been milked during 2020 producing slightly over 432,000 pounds of goat milk. The gross farm income of the dairy goat industry was estimated at \$0.25 million in 2020, down from the \$0.32 million generated in 2019.

When combined, milk production from cattle, milk production from goats, and the sale of dairy cattle animals generated a gross farm value of \$26.3 million in 2020, down from the \$30.4 million generated in 2019. Value-added activities associated with the dairy industry contributed another \$42.4 million in economic activity to the state in 2020. Total economic activity (gross farm value plus value-added) of the Louisiana dairy (dairy cattle and goats) industry was estimated at \$68.7 million in 2020, down from \$79.3 million in 2019.

## Horses

The horse industry continues to be a significant component of the agricultural economy in Louisiana. The horse industry has traditionally been able to be categorized into three sectors: racing, show or competition, and recreational. In terms of number of horse owners, the breakdown of the industry in 2020 into these three sectors was 21 percent racing, 10 percent show or competition, and 69 percent recreational. In 2020, the breakdown of the horse industry by percentage of total gross farm value generated by each sector was 45 percent racing, 32 percent show or competition, and 23 percent recreational.

The state's racehorse industry in 2020 involved 1,597 breeders who owned 8,317 mares that produced 6,414 foals that sold for \$38.5 million. Breeders also owned 1,074 stallions that were bred to 8,843 mares, generating income from stud fees of \$22.1 million. The total gross farm value generated from racehorse production was \$60.6 million. An additional 2,099 racehorse owners had 10,631 racehorses in training or on the track in Louisiana, with a gross farm value of \$106.3 million. The gross farm value of the entire race sector (owners' and breeders' activities) of the horse industry in 2020 was \$166.9 million, not including receipts or fees from racing events or gaming.

The show and competition horse industry (horse shows, barrel racing, cutting, roping, team penning and others) includes 1,358 breeders who own 4,709 mares that produced 3,398 foals that sold for \$13.6 million during 2020. These breeders owned 560 stallions that bred with 2,809 mares, generating \$4.2 million in income from stud fees. The total income generated from show and competition horse production was \$17.8 million. Another 3,896 owners competed on their 13,608 horses, which had a gross farm value of \$102.1 million. The total gross farm value of the show and competition sector of the horse industry was \$120 million in 2020.

A large portion of the horse industry, both in terms of owners and horses, is recreational. Horses have been used for comfort, exercise and enjoyment for quite some time. Approximately 9,240 recreational horse owners in Louisiana bred 21,411 mares and sold 13,707 foals during 2020 for \$15.1 million. These horse enthusiasts owned 2,231 stallions that were bred to 4,655 mares, generating income from stud fees of \$2.3 million. The total income from production in the recreational horse industry was \$17.4 million during 2020. Another 22,463 recreational horse owners have 48,073 horses valued at \$72.1 million – making the total economic contribution of the recreational horse industry \$89.5 million in 2020.

---

# Animal Enterprises

---

There were a total of 150,440 horses in Louisiana, owned by 40,653 people, with a gross farm value of \$376.3 million in 2020. Value-added activities contributed an additional \$41.4 million in 2020, so that combining farm-gate value and the value-added, the total value of horse sector was \$417.7 million in 2020.

In addition to the estimates of gross farm value and value-added activities, there are other potential impacts of the horse industry to the state's economy. First, the average horse owner has been reported to spend about \$4,000 to \$6,000 annually on items such as feed, tack, equipment, veterinary supplies and medicines. Second, the four racetracks in the state employ a large number of people and have been reported to generate expenditures of over \$1 billion annually. Finally, the show and competition industry conducts numerous events and activities each year and is estimated to generate \$200 million annually in expenditures. The American Horse Council suggests that the total economic impact of horse production and these related activities like horse racing and competitions is in excess of \$3 billion annually for the state of Louisiana.

## Poultry

### ***Broilers and Eggs***

Poultry production continues to be the largest animal agricultural industry in Louisiana and is second only to forestry in total economic value for all agricultural commodities. In 2020, 629 Louisiana growers (small producers and commercial operations) produced 994.1 million pounds of broiler meat with a gross farm value of \$735.6 million. Commercial broilers are produced in 11 parishes: Bienville, Claiborne, Jackson, Lincoln, Natchitoches, Ouachita, Sabine, Union, Vernon, Webster, and Winn.

While broiler production is far and away the largest component of the poultry industry in the state, there are several other components that positively contribute to the state's economy. A total of 161 breeder flock producers in 2020 produced 16.3 million dozen hatching eggs with a gross farm value of \$43.8 million. A total of 104 pullet producers produced over 1.1 million pullets with a gross farm value of \$16.8 million. Finally, a total of 887 egg producers (small producers and commercial operations) had a total table egg production value of over 20.9 million dozen eggs valued at \$19 million.

When all the facets of the poultry industry are combined, the total gross farm value was estimated at \$815.8 million in 2020, down nearly \$104 million from 2019. The decrease in 2020 was a function of both reductions in marketings and lower prices. Broiler production was up about 47 million pounds from the previous year. Prices of broiler, edible eggs and hatching eggs were all down significantly. Value-added activities associated with poultry production added an additional \$795.4 million in economic activity in the state, bringing the total economic impact of the poultry industry to \$1.61 billion in 2020.

### ***Quail***

Quail production in the state generally consists of smaller operations reaching niche markets. In 2020, a total of 15,225 quail were estimated to be produced and sold by 17 producers resulting in a gross farm value of \$60,900. Value-added activities associated with quail production provided an additional \$6,699 bringing the total economic contribution of the quail industry to \$67,599 in 2020.

## Rabbits

The production of rabbits for meat and exhibition involved 482 Louisiana producers during 2020. The rabbit fryer industry produced approximately 31,946 pounds of meat in 2020. Louisiana rabbit producers generated \$173.893 in gross farm income. With value-added of \$18,259, the total value of rabbit production in Louisiana during 2020 was \$192,152, up nearly \$62,000 from the previous year on higher production and prices.

---

# **Animal Enterprises**

---

## **Sheep and Goats**

Sheep and lambs and wool were produced by 302 producers in 35 Louisiana parishes during 2020, compared to 271 in 2019. The total number of lambs that were marketed (slaughter, feeder and club/show lambs) was estimated to be 3,496 in 2020 with a gross farm value of \$865,091. 388 stocker sheep were sold in 2020 which is consistent with 381 in 2019. The number of cull sheep sold in 2020 was 708, up from 671 in 2019. Wool production from 1933 sheep produced 9,816 pounds of wool which was down from 2,312 sheep and over 13,812 pounds of wool in 2019. The total gross farm value of the sheep industry was estimated at \$1,029,218, up from \$865,091 in 2019.

The Louisiana goat industry during 2020 consisted of an estimated 1053 producers in 58 parishes, up from 903 producers in 2019. Total inventory of breeding-aged does was estimated at 12,550 does in 2020, up approximately 2,000 head from 2019. Goat producers marketed a total of 7,505 slaughter goats valued at \$1.35 million in 2020. Stocker goats sold in 2020 numbered 3,290 with a value of \$736,664, a significant increase over 2019. There were 1,393 cull goats marketed in 2020 at a value of \$220,456. Goats sold as club or show goats numbered 1,277 head, valued at \$510,800. Gross farm value of goats sold in Louisiana during 2020 was \$2.82 million, up significantly from the \$1.88 million estimate in 2019.

## **Swine**

The Louisiana swine industry is primarily comprised of relatively small producers. In 2020, a total of 303 producers were estimated to have a total inventory of 2,113 sows with an average sow inventory per producer of roughly 7 sows. Other than servicing a local or niche market, most of the swine production in the state is targeted to the show/club pig market. In 2020 a total of 2,181 show pigs were estimated to be sold with a gross farm value of \$872,400, representing roughly 55 percent of the total gross farm value generated by the swine industry. Sales of feeder pigs slaughter hogs, and culls represent the remaining 45 percent of the total gross farm value generated by the industry. In 2020, 4,920 feeder pigs were sold for an estimated value of \$156,003. Sales of 3,198 slaughter hogs generated a gross farm value of \$423,057 while the sale of 756 cull animals (sows and boars) generated a gross farm value of \$125,133.

When added together, the gross farm value of all classes of swine is estimated at \$1.58 million for 2020, down from \$1.65 million in 2019. Value-added activities associated with the swine industry are estimated at \$197,074, bringing the total economic impact of the industry to the state economy to \$1.77 million, down from \$1.86 million during the previous year.

## **Exotic Animals**

The exotic animal enterprises is a relatively small component of the total agricultural industry. The number of producers statewide was estimated at 41 in 2020, down from 56 in 2019. Similarly, the total number of animals marketed decreased from 886 in 2019 to 647 in 2020. Total gross farm value was estimated at \$322,700 in 2020, up from \$222,175 in 2019 based on higher estimated prices. Total value of production for exotic animals, including value-added activities is estimated at \$356,584 for 2020.

# Fisheries and Wildlife Enterprises

---

Total farm value of all fisheries and wildlife enterprises during 2020 was \$778.1 million, down over 8 percent from the \$852.8 million in 2019. Value added in 2020 was \$523.8 million, down from \$568.7 million in the previous year. Total value of all fisheries and wildlife enterprises to the Louisiana economy for 2019 was \$1.30 billion, down over 8 percent from the \$1.42 billion in 2019.

---

## Aquaculture

Louisiana has long been recognized for supporting one of the most diverse aquaculture industries in the United States. Species and products such as crawfish, catfish, alligators, oysters, tilapia, baitfish, soft-shelled crawfish and crabs, ornamental fish, baby turtles, a variety of freshwater game fish and other minor species all have been commercialized successfully. Louisiana's producers continue to be among the leaders in the nation in crawfish, oyster, pet turtle and alligator sales.

Farm-raised crawfish continued to be the state's most valuable aquaculture sector in 2020, representing roughly 63 percent of the total gross farm value generated across all commercial aquaculture enterprises. Growth in demand, both within the state and regionally, has created increasing incentive for expansion of acreage and production over the last several years. Crawfish production has increasingly been incorporated in other farming operations in recent years as producers look to offset struggling rice markets. Estimates from the field in 2020 indicated farm-raised crawfish production occupied 283,234 acres, up 13.9 percent from the previous year. With larger acreage, total production was up from 140.6 million pounds in 2019 to 171.8 million pounds in 2020 despite the difficulties associated with the pandemic. With higher production levels, gross farm value increased in 2020 to \$230.1 million from \$201 million in the previous year. The increase in total gross farm value was limited by prices in 2020 that were estimated to be roughly \$0.09 per pound lower than in 2019.

A total of 376,578 farmed alligators were harvested in 2020. Farm-raised alligators were once again the second-largest segment of Louisiana's aquaculture industry, with an estimated gross farm value of \$74.5 million 86.1 million. This was down significantly from the previous year's estimate of \$86.1 million primarily due to lower production and slightly lower prices. Prices in 2020 were estimated to down slightly from the previous year as continued supply and demand imbalances in domestic and world markets continues to pressure prices. Production volume for farm-raised alligators was down over 13 percent from the previous year.

Oyster production typically represents the third largest segment of Louisiana's aquaculture industry. The oyster production information reported in this summary represents a one-year lag. Information on Louisiana oyster harvests and sales is compiled by the Louisiana Department of Wildlife and Fisheries and provided to the National Marine Fisheries Service, but the final compilation of the data is not available until the middle of the following year. Oyster sales in 2020 reached 1.21 million sacks from a total of 818 producers, valued at \$55.3 million. Production was down in 2020 by over 29 percent from the previous year but gross farm value was only down 28 percent as prices continued to see marginal increases with lower overall supplies and still strong demand.

While the remaining segments of the aquaculture industry continue to provide positive economic impacts to the state, they are significantly smaller than crawfish, alligators, and oyster production. Pet turtle hatchling production declined again in 2020, with estimated sales of 450,000 animals and a gross farm value of \$495,000, decreases of roughly 63 percent for both production and value from the previous year. Many licensed turtle operations continue to be inactive at this time. Fish bait production continues to evolve to meet the demands of recreational fishers, with most production held in recirculating or flow-through systems prior to sale. In 2020, the estimated gross farm value of the fish bait industry was \$1.5 million, down slightly from the prior year. The catfish and minnow industries experienced moderate decreases in both production and gross farm value. In 2020, the gross farm value of Louisiana's catfish industry was \$460,198 while that of the minnow industry was \$50,100. These industries are not expected to grow significantly in the coming years because they have been forced to compete with more consolidated and concentrated competitors in other states.

Other aquaculture species include products such as game fish fingerlings, tilapia, ornamental fish, soft-shell crabs and crawfish, and other minor species. Each has a very limited number of producers. Private ponds are found throughout

---

# Fisheries and Wildlife Enterprises

---

Louisiana, with an estimated 127,200 ponds totaling 42,400 acres. Although these private ponds are not included in the 2020 state total, they do have positive economic impacts.

Examining the economic impact across all commercial enterprises indicates that the total gross farm value of Louisiana aquaculture in 2020 was \$363.4 million, down roughly 1.5 percent from the previous year. Value-added activities associated with aquaculture products added an additional \$245.3 million to the state's economy, bringing the total impact of Louisiana's commercial aquaculture to \$608.7 million in 2020.

## Fisheries

The harvest of freshwater and marine finfish and shellfish in Louisiana continues to contribute significantly to the state's economy. Fishery landings are recorded by two government agencies. The Louisiana Department of Wildlife and Fisheries receives monthly reports from the initial buyers (processors, dealers, etc.) who are required to record every transaction via trip tickets. Species weights and dockside sales values of the landings are reported for all commercially harvested species. The National Marine Fisheries Service also is responsible for estimating fisheries landings, using both regional National Marine Fisheries Service data collectors and Louisiana Department of Wildlife and Fisheries reports. The information reported here is from those two cooperating sources. All this data is provisional and subject to change.

The freshwater and marine fisheries data presented in the report this year (2020) reflect the calendar year 2019. The one-year lag is necessary to ensure data accuracy. Real-time reports on fisheries landings are not available until four months after the fact, and final data often runs six to twelve months behind. Estimating landings for the second half of the year based on landings reports from the first half is inaccurate. This method of reporting fisheries landings data has been in place since the 2004 Louisiana Summary; data prior to that volume may not be directly comparable to the data reported since 2004 because of using the different estimation methods. To compare state-level landings for years prior to 2004, on a calendar-year basis, please consult the US-NOAA-NMFS website.

One final caveat is that parish totals for fisheries landings will not equal the state total because of legal confidentiality requirements. When there are fewer than three sources in a parish that report landings of a fisheries commodity, the number of landings cannot be publicly released by the Louisiana Department of Wildlife and Fisheries without breaking confidentiality requirements. There may also be parishes reported in this volume for which no landings or values were provided by either of those agencies but for which there was catch. Furthermore, fisheries landings are reported for the parish in which the fish are offloaded – not the parish in which the boat and its crew may be domiciled or the parish where the catches actually were made. However, producer estimates are based on commercial licenses which are based on the fishermen's domicile.

### ***Freshwater Fisheries***

The freshwater finfish (in order of most pounds caught) are primarily buffalo, shad, catfish, gar, carp, and bowfin and are less valuable per pound than their marine counterparts. On the whole, freshwater finfish hold a lower commercial value than marine finfish. Total freshwater finfish value decreased in 2019. Landing values in 2018 were \$5.6 million for 12.8 million pounds whereas landing values in 2019 were \$4.9 million for 12.7 million pounds. Landings decreased by nearly 100 thousand pounds in 2019 compared to 2018. The price per pound decreased from \$0.44 to \$0.39. The total number of fishermen increased about 10% in 2019 from 1,926 to 2,118.

Wild catfish in Louisiana come in as one of the more valuable freshwater finfish caught at \$0.53 per pound. Wild caught catfish are classified differently than farm raised catfish, which are considered within the aquaculture section. The price per pound decreased from \$0.68 in 2018. Catfish caught within Louisiana waters in 2019 were 4.4 million pounds valued at \$2.4 million, down from 2018 where 4.7 million pounds was valued at \$3.2 million.

All of the parishes with wild crawfish landings are within the Atchafalaya Basin where inflows from both the Mississippi and Red Rivers are controlled by the U.S. Army Corp of Engineers. Wild crawfish compete with the farm raised crawfish in the markets, and wild volumes are largely constrained by the floodwater events in the Atchafalaya basin. While a minimal difference between the two, wild crawfish tend to be bigger in size and hold a slightly different flavor due to what they eat. In 2019, wild crawfish landings were down 14% from 2018 at 10.1 million pounds compared to 11.7 million pounds (2018). Value was up slightly at \$14 million from \$13 million, an increase of 9%. Crawfish prices are contingent on supply and demand, and the average price per pound was \$1.43 over the season.

---

# Fisheries and Wildlife Enterprises

---

Overall, landings from the freshwater fisheries sector have been on an upward trend since 2015 and in 2019 had a gross value of \$19.2 million.

## ***Marine Fisheries***

Marine finfish landings for food are varied and complex with about 60 different species being landed for a total of 8.6 million pounds in 2019, excluding menhaden. This was a 17% decrease from 2018, when 10.3 million pounds of marine finfish were landed in Louisiana. With the exclusion of menhaden, the top 5 landed species were black drum, herrings, sheepshead, red snapper, and king mackerel. By value, (also, excluding menhaden), the top 5 species were red snapper, black drum, king mackerel, yellowfin tuna, and sheepshead. Total saltwater finfish landings, excluding menhaden have continued to decline. The value in 2019 totaled \$16.3 million, a 17% drop from \$17.4 million in 2018. The 2018 values were 10 percent lower than those in 2017. The continued decrease in marine finfish landings can be attributed to record floodwaters within the Mississippi and Atchafalaya Basins. The Mississippi River remained above flood stage over 200 days triggering the opening of the Bonnet Carré Spillway twice in the same year. The spillway was open for 123 days in 2019 causing a significant decrease in salinity in coastal waters.

Menhaden (or pogey), a low-value, but high volume finfish species is caught for its value outside of human consumption. Landings in 2019 were around 741 million pounds, a decrease of 13% from 855 million pounds in 2018. However, the 2019 numbers was still down 25% from 2016 landings of 1 billion pounds. The 2019 catch was valued at \$60.3 million, a rather significant (33%) decrease from \$90.3 million in 2018. The value of the fish in terms of price per pound decreased from 10.6 cents per pound in 2018 to 8.1 cents per pound in 2019. This is lower than the value of menhaden in 2014 and 2015 of 10.8 and 9.5 cents per pound, respectively. While this fish is too small and oily to eat, it is used in a variety of different ways including fertilizers, animal feeds, omega-3 dietary supplements, cosmetics, as well as bait. The prices of these products are a function of the world supply of oils and meals, particularly by the fisheries for the anchovetta of the Pacific Coast of South America.

In 2019, 7.9 million pounds of oysters were harvested by 818 fishermen, or about 1.2 million sacks. This is a 29 percent decrease from 11.1 million pounds in 2018. In 2019, the price per pound for oysters remained stable and did not vary from the 2018 price of \$7 (\$45.48 per 40-pound sack). To calculate prices per sack, an assumption of 6.47 pounds of shucked oyster meat per sack was used. The gross value of oysters harvested in 2019 was \$55.3 million, a decrease of 29 percent from \$77.5 million in 2018. The decrease in oyster harvest can be attributed to Mississippi and Atchafalaya Basin floodwaters and the opening of the Bonnet Carré Spillway. Several areas used as public oyster reefs saw 100% oyster mortality due to the long duration of freshwater conditions.

Louisiana hard crab landings usually range from 40 to 50 million pounds annually made up of almost 100% blue crab with less than 0.1 percent of stone crab claws. Blue crab landings were 40 million pounds, fished by 2,418 license holders and valued at \$55.6 million in 2019. This was a 11 percent decrease in landings from 45 million pounds and a 12 percent decrease in value from \$63.6 million in 2018. The decrease in hard crab landings is also likely due to the Mississippi and Atchafalaya Basin floodwaters and the opening of the Bonnet Carré Spillway.

Peeler or buster crabs are blue crabs that are close to molting their shell. These crabs are sold to soft shell facilities to produce soft shell crab. For many years now, the soft shell industry has been in decline. In 2018, 14,466 pounds of soft shell were produced. In 2019, 9,191 pounds were produced valued at \$73,010. This was a 36% decrease in pounds and value.

Louisiana shrimp landings in 2019 consisted mainly of 4 species: white shrimp, brown shrimp, northern pink shrimp, and Atlantic seabob shrimp. Historically, Louisiana shrimp harvest landings and values have been dominated by white shrimp. In 2019, white shrimp landings contributed 76% of the total landings (61.8 million pounds) and 84 percent of the total value (\$98.8 million). In the same year, brown shrimp made up 23.4 percent of the harvest (19.1 million pounds) and 15.4 percent of the total value (\$18 million), with northern pink and Atlantic seabob contributing the rest (<1 percent in both categories). Total shrimp landings in 2019 were down 14 percent from 2018 from 97.2 to 83 million pounds while value increased 1 percent from \$120 million to \$121 million. The average price per pound in 2019 was up 21 cents from 2018 to \$1.45. The decrease in shrimp landings can be attributed to the Mississippi and Atchafalaya Basin floodwaters and the opening of the Bonnet Carré Spillway.

---

## Fisheries and Wildlife Enterprises

---

In 2019, marine fisheries landings in Louisiana were valued at \$288 million, a 22% decrease from \$368.9 million in 2018.

### Fur

As reported by the Louisiana Department of Wildlife and Fisheries, the total value of the 2019–2020 furbearer harvest was estimated at \$14,500, down significantly from \$48,075 reported during the previous year. This value represents total pelts across all species shipped out of state by fur dealers and individuals but does not include income associated with meat production from harvested furbearers.

The total number of trapping licenses sold decreased slightly this year from 2,572 licenses reported in 2018–2019 to 2,462 reported in 2019–2020. Despite the relatively minor reduction in licenses sold, the total number of pelts harvested in 2019–2020 was significantly lower at 2,372 pelts compared to 5,395 pelts harvested in 2018–2019. The average price paid for a single pelt taken during the 2019–2020 trapping season was \$6.11, down sharply from \$8.91 the previous year and down \$2.76 per pelt from the 10-year average. The 10-year average price per pelt ranged across species ranged from \$0.74 for opossum to \$37.16 for bobcat.

The total nutria harvested during the 2019–2020 season was 245,865 which was up slightly from last year's total of 223,155. The increase in harvest was likely a direct result of the decision made during the 2018-19 season to increase the bounty paid for nutria from \$5.00 to \$6.00 per animal. This higher bounty level went into effect during the 2019-2020 season. The average price paid for nutria pelts was \$2.00, unchanged from the previous year. When the additional \$6.00 per nutria paid under the Coastwide Nutria Control Program (CNCP) is considered, the total value of the nutria harvested is estimated at \$1.5 million, up from \$1.1 million in the previous year.

### Hunting Lease Enterprises

The value of recreational hunting in Louisiana is estimated by the income derived from hunting lease enterprises. The number of producers who leased land in the state during the 2019–2020 hunting season was estimated at 5,019, up from 4,964 reported during the 2018–2019 hunting season. This figure consists of 3,557 individuals who leased their land for upland game hunting (primarily white-tailed deer and wild turkey) and 1,462 individuals who leased their land for waterfowl hunting.

In 2019–2020, approximately 4.77 million acres were leased for upland game hunting and approximately 1.78 acres were leased for waterfowl hunting. Both estimates are down from the previous year when approximately 6.25 million acres were leased for upland game hunting and approximately 1.82 million acres were leased for waterfowl hunting. In 2019–2020, the estimated value for upland game hunting leases was \$83.5 million and \$50.5 million for waterfowl, both down from the previous year. The estimated price per acre of leased land for hunting purposes remained unchanged in 2019-2020 at \$17.50 per acre for upland game and \$28.40 per acre for waterfowl.

### Honey

Beekeepers reported robust cash flow due to the desire for local honey. As citizens become aware of the importance of pollinators in agriculture, some seek to become hobby beekeepers. AgCenter agents refer aspiring apiarists to local bee clubs for classes. The anti-allergenic property of local honey is another reason many consumers state that they purchased local honey.

Small hive beetles and Varroa mites continue to be pests for commercial beekeepers. In general, beekeepers report lower numbers of small hive beetles (SHB) in their hives. Some apiarists are successfully treating with oxalic acid vapor. Sporadic infestations of wax moths occurred. Beekeepers are using IPM to manage bee pests. The USDA Agricultural Research Service's Bee Breeding and Physiology Laboratory is continuing to research bee pests with an emphasis on integrated pest management. Volunteer beekeepers are providing training in beekeeping through a basic program presented to bee clubs.

---

## Fisheries and Wildlife Enterprises

---

Homeowners, utility companies, realtors and others continue to complain about infestations of honeybees in homes and other improved structures. Extension agents with the AgCenter refer these complaints to local beekeepers in effort to rescue these colonies and place the bees in productive hives. Again, social media has been a useful tool in apprising beekeepers of bees in need of removal. Anecdotally, beekeepers tend to report successful removal through social media.

Despite the increased interest in beekeeping and increased demand being seen for local honey, Hurricanes Laura and Delta created significant difficulties for the honey industry in 2020. The destruction of hives and the resulting reduction in honey production was experienced in many locations. As a result, production of honey was estimated to be down about 15 percent from 2019 at 2.8 million pounds. The market disruptions caused by the pandemic were also believed to have some negative impacts on prices despite still relatively strong demand during 2020. As a result, the wholesale price of honey in 2020 was estimated at \$1.68 per pound, down slightly from \$1.78 in 2019. In addition to the value of the honey, other value can be generated by beekeepers is the sale of queens and bees. While not included in the Ag Summary calculations, the current prices of queens are estimated at \$35 per queen while the price of a five framed Nuc ranges from \$150 to \$160. The number of hives estimated in 2020 was 41,083, down from 42,626 estimated in 2019. The number of beekeepers commercially selling honey was estimated at 783, also down from 1,068 estimated in 2018.

Gross farm value for honey production in 2020 was estimated at \$4.7 million, down from \$5.9 million in 2019. When value-added activities are added, the total economic impact of honey enterprises was estimated at \$5.8 million. As mentioned previously, other values of beekeeping include pollination services, the sale of fertilized queen bees, package bees, and hive nuclei (commonly called “hive nucs”), and the sale of wax, propolis, pollen and other hive products.

# Plant Enterprises

---

The gross farm value of all plant enterprises was more than \$3.58 billion in 2020, an increase of 4 percent from the \$3.44 billion in 2019. Value added was \$3.52 billion for all plant commodities during 2020, down slightly from \$3.63 billion in 2019. Total value of all plant or crop enterprises to the Louisiana economy was \$7.10 billion in 2020, up marginally from \$7.07 billion in 2019.

---

## Cotton

In 2020, 163,029 acres of cotton was harvested in the state of Louisiana which compares to 270,660 in 2019 and 190,567 acres in 2018. Fifty-eight percent of the acres in 2020 were irrigated. Yields across irrigated and dryland acres averaged 1,074 pounds of lint per acre which compares to 1,080 and 1,115 pounds of lint per acre in 2019 and 2018, respectively.

Gross farm value of cotton lint sales was \$112.0 million in 2020, with \$67.1 million from lint harvested on irrigated land and \$44.9 million from sales of lint harvested from non-irrigated land. Sales of cotton seed contributed an additional \$30.8 million. Gross farm value of all cotton sales was \$142.8 million, with value added contributing \$35.7 million, so the total value of cotton production in 2020 was \$178.5 million.

## Feed Grains

In 2020, there were 496,800 acres of feed grains harvested in the state, down roughly 55,000 acres from the 551,164 harvested in 2019. All of the decrease in feed grain acres was attributable to corn as harvested acres of corn went from 554,802 acres in 2019 to 482,636 acres in 2020. Grain sorghum acres were up roughly 1,800 acres in 2020 from the previous year while oat acres were mostly unchanged. Higher fertilizer and fuel prices were likely a large reason for the decrease in corn acres. Grain sorghum acres continue to be at historically low levels given relatively low basis levels and cash prices for this commodity.

Lower acreage and slightly lower commodity prices resulted in a lower overall gross farm value for feed grains in 2020 compared to the previous year. The gross farm value for all feed grains was estimated at \$327.3 million, down 15.7 percent from the previous year. Value added for feed grains was estimated to be \$657.3 million in 2020. When combined with the gross farm value, the total value of feed grain production in Louisiana was estimated to be \$384.5 million in 2020, down from \$456.1 million in 2019.

### ***Corn***

There were 482,638 acres of corn harvested in 2020 which compares to 544,802 in 2019, and 431,316 in 2018. Corn yields in 2020 averaged 184.2 bushels per acre which is slightly above the 2019 crop that averaged 179.1 bushels per acre. Approximately seventy percent of the corn acres were produced on irrigated land in 2020. For the past five years, corn yields in Louisiana have averaged 179.2 bushels per acre.

Gross farm value of corn production in 2020 was \$324.4 million, down from the 2019 value of \$386.2 million. This decline in value of corn production in the state was due to a combination of decreased harvested acres and lower grain prices, which adversely affected the gross value.

### ***Grain Sorghum***

In 2020, 7,834 acres of grain sorghum were harvested throughout the state. This compares to 6,054 acres harvested in 2019 and 8,656 acres harvested in 2018. Grain sorghum yields in 2020 averaged 86.0 bushels per acre which compares to 83.2 and 92.3 bushels per acre in 2019 and 2018, respectively.

Gross farm value of sorghum production was \$2.7 million, up from \$1.8 million in 2019, due to an increase in acreage and total production.

---

# Plant Enterprises

---

## Oats

In 2020, four producers were reported as planting nearly 700 acres of oats in the state but only 327 acres were harvested for grain. This was mostly unchanged from the 307 acres harvested and 3 producers reported in 2019. The average oat yield in 2020 was 66.2 bushel per acre, essentially unchanged from the estimate in 2019. Gross farm value of oat production was \$57,404 in 2020, compared to \$59,160 in 2019.

## Forestry

Like many facets of the state's agricultural sector, timber industries in Louisiana have experienced an unprecedented disruption stemming from COVID-19 in 2020. The projected Louisiana gross farm value of harvested forest products fell by nearly 9% in 2020, from \$921 million dollars in 2019 to \$841 million. There are two major factors in play that could account for this apparent decrease, decreased hardwood timber demand and the remaining low timber prices.

Despite that concern over the economic contraction experienced in the U.S. early in the pandemic prompted some sawmills and pulp mills to shut down or curtail production operations, demand for pine sawtimber remained strong throughout the year of 2020. Pine sawtimber harvest saw a short-term decline as compared to the 2nd quarter of the previous year, but quickly rebounded from the third quarter amid a flaming-hot housing market. Pine sawtimber harvest reached a record level at 992 million board feet (ft<sup>3</sup>) in 2020. Pine chip-n-saw harvest followed similar trends and increased by 13% (to 0.97 million cords). It is estimated that about 4.9 million cords of Pine pulpwood were harvested. This was a slight decline of 5.1 million cords in comparison to 2019 level. Hardwood timber harvests all trended down. More specifically, harvest for hardwood sawtimber and pulpwood had decreased by 13 million ft<sup>3</sup> (16%) and 91 thousand cords (17%) as compared with a year ago.

Higher lumber demand is not translating much into higher timber prices. In fact, timber prices are largely driven by the standing timber inventory and set locally. Oversupply situation in Louisiana drives down the timber price. Average pine sawtimber prices and pine pulpwood prices were down 12 and 18% to an annual average of \$171.75/MBF and \$19.22/cord. Chip-n-saw price mirrored the trend declining 9% to \$46.31/cord. Hardwood pulpwood price experienced the biggest price drop among all five timber products, from \$35.14/cord to \$24.52/cord. Hardwood sawtimber was the only product that underwent a price increase by 21% (\$378.25/MBF) compared to the 2019 level of \$313.55/MBF.

Lockdowns, social distancing restrictions, worker-safety concerns, and uncertainty made 2020 a tough year for many logging companies and sawmills, but this was not reflected in the delivered timber prices because timber's value was still the biggest component in the delivered prices. Statewide delivered timber prices decreased by approximately 3-12% for all grades and species except for hardwood sawtimber, which went up by 11% in 2020.

Price data from Timber Mart-South should be more relied on to indicate timber pricing trends. Given that stumpage prices could vary significantly across parishes and uncertainties accumulate in timber prices, forestland owners should contact a consulting forester when considering timber harvest and sale.

The effects of COVID-19 became evident throughout Q2 of 2020. All major pine products saw noticeable decreases in reported stumpage values between April and June, but gradually started to reverse through the third quarter. However, the sustained low prices in the pine timber markets negatively affected forest landowners' harvest income. Even with strong timber sale performance in the first quarter, the revenue of private forest landowners from the sale of forest timber only ended up at a value of \$348 million in 2020, about 13% lower than last year.

## Fruit Crops

Fruit production in Louisiana is common in many backyards and hobby gardens. Commercial fruit production occurs too, although compared United States and World fruit production, Louisiana commercial fruit production tends to occur on smaller acreage farms. There are of course several exceptions with a few Louisiana producers growing on large acreage farms primarily focusing on strawberry and blueberry production. Combining both small fruit and tree fruit crops, Louisiana's gross farm value for all fruit is \$31 million. The three crops that bring in the most revenue include citrus at a

---

# Plant Enterprises

---

gross farm value of \$10 million, strawberries at a gross farm value of \$8.2 million and blueberries at a gross farm value of \$7.79 million.

Citrus production is concentrated in the lower portions of Louisiana, where freezing temperatures are uncommon. The citrus industry is highly impacted by both freezes and hurricanes. 2020 was not an easy year for hurricanes as we had 5 named storms hit land. There was also record-breaking rainfall with a state average of 90 inches. This is about 10-15 inches above typical rainfall values. Citrus growers primarily produce satsumas, an easy to peel sweet fruit, followed by navels and then a wide variety of other citrus crops. Our citrus industry faced more challenges than weather. There are several diseases that are extremely detrimental to this industry, namely citrus greening and canker. To continue to commercial produce citrus in Louisiana, growers look for new production practices, new pesticides, and potentially new crops if all else fails.

Strawberry production is primarily concentrated in two parishes - Tangipahoa (160 planted acres) and Livingston (28 planted acres). Strawberries are a high value fruit crop. They are hand harvested and extremely perishable. Berries are field packed, cooled and then sent to the end user. Most growers are selling to local restaurants, farm stands, farmers markets, and independent grocery retailers. Strawberries remain a popular crop within Louisiana marketed heavily by individual growers, the annual Strawberry Festival and the strawberry commodity board. Strawberry producers are always looking for firmer berries that can withstand packing and shipping, sweeter tasting berries, and postharvest measures to prolong shelf life for the end user.

Blueberries are another main fruit crop produced in Louisiana. The production of blueberries occurs in the northern portion of the state with the two largest producing parishes being DeSoto (120 harvested acres) and Moorehouse (70 harvested acres). While most fruit crops are hand harvested, blueberries can be both hand or mechanically harvested. Most blueberries in the state of Louisiana are hand harvested. Mechanical harvested blueberries are typically sent to processors for value added products. Blueberry growers are concerned with the presence of spotted wing drosophila. While our state hasn't been completely spared from this devastating insect, we are not as inundated as neighboring states. Spotted wing drosophila will be a continued threat to the small fruit industry in the SE United States. We must do our best to monitor for this devastating insect. Blueberries, like strawberries, can be field packed, cooled and shipped. Some larger growers may harvest into large containers and then use assembly lines to sort berries for marketability characteristics. Blueberries grown in Louisiana are sweet and delicious.

The LSU AgCenter is committing itself to strengthen county agent knowledge of small fruit crops. The LSU AgCenter has recently joined the Southern Region Small Fruit Consortium to train county agents in production practices of grapes, muscadines, blue and blackberries, strawberries and raspberries (all categorized as small fruit crops). If you are interested in this group, please visit the [smallfruits.org](http://smallfruits.org) website for university-based research.

## Commercial Greenhouse Vegetables

Greenhouse vegetables are grown throughout the state on a smaller scale than vegetable field crops. While vegetable field grown crops produce a high return rate per acre, modified structure (whether greenhouse or high tunnel) also bring in a high value to acre profit for the producer. By modifying the environment, we can extend the season both on the front end and sometimes back end. Producing vegetable crops earlier in the season, farmers can ask a premium price. They do however have some costs that field producers do not have, such as structure maintenance costs and electricity to heat and cool structures. The two primary crops grown in modified structures are tomatoes and cucumbers. Although lettuce, bell pepper and cutflower production also occur. The gross farm value of greenhouse edible crops in Louisiana is \$1.96 million. Caddo Parish (\$442k GFV), St. Helena Parish (\$343k GFV) and Point Coupee Parish (\$297k GFV) are the three top producing modified structure parishes.

---

# Plant Enterprises

---

The LSU AgCenter continues to focus on greenhouse tomato production primarily at the Red River Station with trials run by Carrier Lott. High tunnels and greenhouse crops require detailed attention paid to crop rotations and plant back intervals after pesticides are used. When seasons are extended it is harder to rotate crops, which can lead to more disease, insect and weed pressures. Pesticides are also limited when applied indoors as opposed to outdoors where there is greater ventilation. Greenhouse growers must also pay careful attention to marketing their crops as they are often the first to the market with tomatoes and year-round lettuce, it's always important for them to relay information to the consumer on the benefits and value of locally grown produce. The modified structure industry has much room to grow in Louisiana with consumers demanding more locally grown crops and want year-round access to them. This is an area with potential room for growth not just in traditional crops, but maybe even with small fruit crops like blueberries in the near future.

## Hay Sold

Hay production for commercial sales is a limited part of the total hay production in Louisiana. Nevertheless, hay produced from 190 acres of alfalfa and 369,570 acres of grasslands was sold by 3,737 producers in 2020. Yields averaged 2.8 tons per acre from the grasslands harvested for sale and 5.52 tons per acre from the alfalfa harvested for sale. Production included 1.036 million tons of grass hay and 1,046 tons of alfalfa hay. Compared to numbers reported in 2019, the acreage of grasslands used for commercial hay production decreased by 2.1%.

Weather conditions were conducive for optimum hay production during most of 2020. However, Hurricane Laura hit the southwest region in late-August and had a dramatic negative impact on hay production for the remainder of 2020. The hurricane deposited much debris and fallen trees on hayfields, and thus many acres of hay were not harvested. Gross farm value of all hay sales, including some minor alfalfa production, was \$98.9 million, which was a decrease of nearly 22 percent from the previous year. This decrease in gross farm value for hay production was likely due to the decrease in acreage harvested in 2020 due to Hurricane Laura.

## Home Vegetable Gardens

The number of home gardens in any given year fluctuates greatly with people's interest and the economy. When economic conditions are weak, the number of households using home gardens tends to increase. Vegetable gardening is not only a hobby but also extends the family budget by freeing up limited funds for other food purchases. Research conducted by the U.S. Department of Agriculture indicated approximately one in three households have some kind of garden, including backyard fruit trees, vegetable plots, berry patches, etc.

With this assumption of a garden for one in every three households, a methodology based on parish population data was developed to estimate the number of gardens in each parish of the state. Based on these calculations, the number of home gardens in Louisiana is estimated at 625,329 for 2020. The average value of the home garden was estimated at \$548 for 2020. The basis of this value was a 2008 survey conducted by the vegetable industry that indicated that the average garden produced commodities valued at roughly \$525 per garden. This value is updated each year based on the year-to-year price change experienced in a mix of vegetable and fruits that are typically produced in Louisiana. Given these assumptions, the 2020 gross farm value of home vegetable gardens is estimated to be \$342.7 million.

## Nursery Crops

The commercial nursery industry in Louisiana consists of fruit and nut tree nursery stock production, foliage plants, woody ornamentals (trees and shrubs) and floriculture/bedding plants. In 2020, commercial nursery crop production in Louisiana has had a record year in sales, with expansion of housing causing a demand for plants, plus a necessary replanting after catastrophic storms and floods. The pandemic contributed to estimates of well over 15 million new gardeners nationwide. Moreover, during stay-at-home orders of 2020, many Louisiana residents put time, effort, and money into landscapes causing a major influx of customers and purchasing. With the nursery industry being declared "essential" the industry was able to take full advantage of the increase in spending. Heavy rains, hard freezes and hurricanes hit the ornamental production area in 2020. However, demand continued and prices have begun to increase. This continued increase in demand, along with improvements experienced in the overall economy continued to lead to strong demand again in 2020 and a positive outlook for coming years.

---

# Plant Enterprises

---

Overall, there was conservatively a 5-7% increase in wholesale production. Wholesale production was \$6.7 million for the growers of fruit and nut tree nursery stock in 2020. This category, consisting of citrus, blueberries and figs, among others. Bedding plant and floriculture crop production was \$42.4 million in farm gate sales in 2020. The largest segment of the nursery industry continues to be woody ornamentals, primarily trees and shrubs. At the wholesale level, woody ornamental growers sold products worth \$63.1 million during 2020. Wholesale production of foliage plants accounted for \$3.1 million in sales in 2020. Including value-added of \$63.4 million, the total value of the Louisiana nursery industry at the wholesale level was \$178.7 million in 2020.

## Peanuts

In 2020, nine producers planted and harvested 2,578 acres of peanuts compared to seven producers and 2,466 acres in 2019. Yields averaged 4,757 and 4,996 pounds per acre in 2020 and 2019 respectively. These yields are reflective of a good growing season during both years. Soilborne disease (stem rot) pressure continued to plague peanut fields and increased input cost associated with fungicide applications. Gross farm value in 2020 was estimated at \$2.7 million as compared to the estimate of \$3.3 million in 2019.

## Pecans

The 2020 harvest is estimated to be 6.51 million pounds. This is down from the 6.76 million pounds estimated in 2019. According to the alternate bearing tendency of much of the pecan production in the state, it should have been a year of higher yield potential. Several tropical weather events in the middle to late production greatly reduced the pecan harvest in several portions of the state, notably in the Southwest, Central and Northeast production regions.

The production of improved cultivars declined slightly with the negative weather conditions coming in at about 3.52 million pounds in 2020 compared to 3.59 million pounds in 2019. Native trees also saw diminished production in 2020 with 2.99 million pounds being reported compared to 3.16 in 2019. Overall wholesale prices for pecans decreased in 2020, despite the reduced production within the state. Wholesale prices in 2020 varied greatly between native and improved pecans. The wholesale prices for improved pecans were often dependent on orchard management practices and cultivar selection. Wholesale prices for native pecans are often dependent on their commercial viability.

Commercial pecan production still contributed to the agricultural economy of Louisiana with an estimated total gross farm value of \$5.94 million in 2020. This was a reduction from an estimated \$8.82 million in 2019. When value added activities are considered, the total economic impact was estimated at \$7.6 million.

Improved orchards are predominately located in the central and northern parts of the state with native trees dominating production in southern Louisiana. Most modern plantings are of improved cultivars. As certain cultivars fall out of favor, they can occasionally fall within the native production category in management and commercial viability. Significant native production occurs in Texas, Oklahoma, and Louisiana. Generally, over one-half of the improved variety acreage in Louisiana is managed to control diseases, insect pests and weeds. With the reduction of wholesale prices more producers are moving to low-input practices over high-input management.

## Rice

Louisiana planted over 469,655 acres in 2020. The Rice Variety by Parish Survey conducted annually by extension agents indicated that Louisiana planted approximately 90% long grain, 10% medium grain and 1% special purpose rice varieties. The top planted rice varieties and hybrids included CL153 (19.5%), Cheniere (13%), CLXL745 (13%), CL111 (10.8%), Jupiter (9.7%), XP753 (9%), Mermentau (6.6%), and PVL02 (4.9%). Clearfield seed technology in both inbred and hybrid rice varieties made up approximately 51% of the acres. The Provisia herbicide technology was planted on 6% of the total acreage.

Early season weather was ideal for planting in southwest Louisiana. It was estimated that 70 to 75% of the rice in the region was planted during the first two weeks of March. Early planting in south Louisiana was encouraged by warmer than normal conditions (above 80°) in March. Excellent stands and good growing conditions rumored record setting potential. Wet conditions in Northeast Louisiana delayed planting in some areas. Rice emergence and development was slow and uneven due to the cold wet soils. Rice fields throughout the region had spotty stands and it was common to see

---

# Plant Enterprises

---

3-leaf rice and rice just emerging from the ground. While this does not seem that bad, it does make agronomic decisions difficult. Proper herbicide application, flood establishment, nitrogen application and other decisions are dependent on the proper rice growth stage and can negatively affect yield at the end of the season.

Hurricane Laura (Category 4 hurricane) hit south Louisiana on Aug. 27. Harvest was approximately 95% complete in southwest Louisiana and 40 to 50% completed in northeast Louisiana. Laura was still a Category 1 hurricane when it hit the rice crop in northeast Louisiana. High winds and excessive rains caused flowering rice to blank while more matured rice shattered and lodged. It was estimated that Laura caused around \$28 million damage to the rice industry.

Hurricane Delta made landfall in southwest Louisiana as a very strong Category 2 storm on Oct. 9. Estimates of losses contributed from Delta were approximately \$24 million.

In 2020, the statewide rice average yield was estimated at 6,856 pounds per acre (42.3 barrels or 152.4 bushels per acre), up from 6,187 pounds per acre in 2019. Yield was up 10.8 percent and production up 26.6 percent due to the increase in acres and yield. A total of 31.89 million hundredweights of rice was produced on 465,102 harvested acres in 2020. The gross farm value in 2020 for rice produced was \$418.1 million up from \$294.7 million in 2019. When value-added activities of \$139.2 million are considered, the total economic impact of the rice industry was estimated at \$557.3 million, up from \$392.8 million in 2019.

## Sod and Turfgrass Production

During 2020, sod was produced by 11 Louisiana sod farmers on 3,109 acres of fine turfgrasses, compared with 15 sod producers farming 3,475 acres in 2019. With less sod producers, production acreage was reduced 10.5% for 2020 in comparison to 2019. This contraction in acreage and producers may be linked to the lack of available labor and increased production cost brought on by the pandemic. About 60 percent of the sod acreage in Louisiana is centipedegrass and about one-third is St. Augustinegrass. The remaining acreage is divided among hybrid bermudagrass and zoysiagrass. Zoysiagrass demand has increased over the last several years and remains as more trouble-free alternative to St. Augustinegrass and centipedegrass. Shipping costs are always a major component in the eventual price of sod. However, fuel costs in 2020 remained relatively stable and comparable to cost observed in 2019. Out-of-state sod farms remained a major competitor for our Louisiana producers, especially in the southern Louisiana market.

The gross farm value of sod and turfgrass sales in 2020 was estimated to be \$22.1 million, down from the \$27.3 million in 2019. This reduction in gross farm value is directly attributable to the contraction of the industry that occurred in 2020. Value-added activities for turfgrass production was estimated at \$16.6 million, so the total value of sod and turfgrass production in Louisiana during 2020 was \$38.7 million.

## Soybeans

There were 958,683 acres of soybean harvested by 1,817 producers in 2020 with an average yield of 53.8 bushels per acre. This compares to the previous year where 862,797 acres of soybean were harvested by 1,984 producers with an average yield of 48 bushels per acre.

The planting season was slow in late March and early April due to dry conditions in south Louisiana and wet conditions in north Louisiana. However, the planting progress increased by mid-April. The soybean crop condition had a good rating for most of the production season until Hurricane Laura hit landfall on August 29 which impacted approximately 13-16% of the Louisiana soybean crop. Tropical Storm Beta and Hurricane Delta also hit landfall, affecting similar areas as Hurricane Laura. The storms were estimated to reduce the soybean yield by approximately 2 to 2.5% compared to the pre-storm yield estimates.

Insect and disease pressure were high during the 2020 soybean production year due to unseasonably warm winter temperatures and Hurricanes Laura and Delta.

Early in the production season, the COVID-19 pandemic caused uncertainty to the market. However, there was positive news of a Phase One U.S./China trade agreement for the 2019/2020 soybean marketing year. A rebound in China's purchases of U.S. soybean helped lead to a price surge for soybean in mid-August to mid-September.

# Plant Enterprises

---

## Sugarcane

In 2020, sugarcane was grown on 496,232 acres in 24 Louisiana parishes. An estimated 466,458 acres were available for harvest for sugar. The 11 operating raw sugar factories in the state processed 16,600,000 tons of sugarcane. In total, the 11 factories produced 1.927 million short tons of sugar (96° pol). The average yield of cane produced from each harvested acre was 36.0 tons/acre. The average sugar recovery at the 11 raw sugar factories was 233 pounds of sugar (96° pol) per ton of cane. The yield of commercially recoverable sugar produced per harvested acre was approximately 8,265 pounds. The average predicted price for raw sugar is \$0.273 per pound. Molasses price is estimated at \$130 per short ton at 79.5° Brix.

The gross farm value of the 2020 sugarcane crop was \$663.7 million for sugar and molasses. The gross farm value represents 60 percent of the value of the sugar and 50 percent of the value of molasses produced. The remaining percentages are for processing and marketing, which amounted to \$453.2 million. Total value of the sugarcane crop to Louisiana producers, processors, and landlords at the first processing level was \$1.12 billion.

The growing season of 2020 was nearly ideal for sugarcane production. Disease and insect pressure was moderate to low. Hurricanes Laura and Delta made landfall south of Lake Charles, causing sugarcane acreage in the western and northern most parishes to lodge because of high rainfall and winds. Hurricane Zeta made landfall later in the season in Terrebonne Parish, causing the sugarcane crop to lodge in the southeastern most production areas.

Harvest began on September 16, 2020, at the Alma mill and concluded at LASUCA raw sugar factory on January 28, 2021. The 2020 harvest was marked by a dry first half and a wetter second half. The Louisiana sugar industry did not experience any severe freezes during the grinding season. The total amount of sugar produced in 2020 was a record for the Louisiana sugar industry.

## Sweet Potatoes

Louisiana sweet potato harvested acreage for 2020 was estimated at 6,691 acres. This was a slight reduction in acreage from the 2019 season where harvested acreage was estimated at 7,240. Louisiana acreage has declined gradually in recent years due to retirements, negative weather events and producers choosing to grow alternative crops. Sweet potato production has a significant positive impact on the Louisiana agricultural economy. Louisiana currently ranks fourth in sweet potato acreage behind North Carolina, Mississippi and California.

The 2020 planting season had some weather-related delays that impacted seed bed operations and slowed field planting. The planting season was extended due to these delays and later plantings required irrigation for establishment. Louisiana sweet potato producers escaped a potential disastrous season with four named hurricanes, Laura, Beta, Delta and Zeta which presented during the final phase of the growing season and during peak harvest months. Delta had the most impact on the crop, delivering 9-11 inches of rain in the sweet potato production areas. Production in Avoyelles Parish was most impacted by the rain events. A few producers reported loss of entire fields; however, most losses were restricted to the low ends of fields. Storability following a wet harvest season is a concern, due to the amount of moist soil remaining attached to the roots.

Yields did remain strong on harvested acreage. Louisiana yields have been strong and marketable product per acre has increased due to the marketing methods producers are utilizing. The majority of the Louisiana crop (55%) is destined for the processing market where they desire a larger potato for processing thus resulting in a higher yield on that dedicated acreage. Fresh market utilizes the USDA grade standards which might result in slightly lower overall yield but stronger pricing. Approximately 45% of Louisiana crop is marketed through fresh market. Growers are capitalizing on more marketing options such as individual shrink wraps, tray wraps, small bags, etc. in the fresh market that provide more opportunities to market the small, sweet potatoes.

COVID was a concern this year with the work force necessary to plant and harvest the crop. Social distancing is not fully possible due to the planting and harvest systems used. Efforts were made to minimize exposure and protect the labor crews in all instances.

---

# Plant Enterprises

---

Guava Root Knot nematode continues to be a concern for the industry. The pest is not established in the state and strict quarantine and monitoring programs are in place to hopefully ensure that our industry remains minimally impacted by this nematode. Other pest concerns include alligator weed, pigweed, smell melon and cucumber beetle.

Louisiana sweet potato crop farm gate value for 2020 was estimated at \$44.1 million. Value added adds another \$33.1 million to the crops value for a total value of \$77.2 million.

## Vegetables, Commercial

The Louisiana vegetable industry is incredibly diverse both in the types of crops grown and the backgrounds of farmers growing those vegetables. Vegetable farmers differ across the state, representing people from different races, religious beliefs, ages, and sexes. Vegetable farmers also have vast differences in the land needed and production practices used to make a living in this business. We have full-time farmers growing on less than an acre and other full-time farmers growing on hundreds of acres, and many producers growing on land ranging from 5-80 acres. All find a way to make a living. To further explain the diversity in this industry, one must consider production practices. Louisiana growers range from conventional farming to strictly organic and or sustainable production practices. This truly unique group of people growing 40 plus types of crops contributes to a gross farm value of \$45.5 million to our state's economy. Of the 40 plus vegetable crops planted each year, the three with the highest gross farm value include:

- Tomatoes produced by 341 farmers on 300 planted acres for a GFV of \$15.6 million.
- Watermelons produced by 143 farmers on 688 planted acres for a GFV of \$4.8 million.
- Bell peppers produced by 160 farmers on 155 planted acres for a GFV of \$2.8 million.

Vegetables produce a high profit return on small acreage when compared to commodity crops. But with that high return comes high risk. The 2020 vegetable season was a tremendous challenge for all farmers. Five named storms hit Louisiana. We had flooding in areas that never flooded and a tremendous amount of rainfall. WGNO, a local news station based in New Orleans, reported a state rainfall average of 90.69 inches... that is 15-20 inches above normal ranges. The vegetable crop industry is a highly perishable industry. Most of our crops, with the exceptions of bulbing onions and Irish potatoes, do not store more than a few weeks. Extreme weather combined with COVID-19 impacts really made vegetable producers shift in their marketing efforts as well. Many farmers markets went to drive through experiences. Large orders from restaurants, hospitals and schools were lost due to closures. Some farmers started roadside stands at their farms, others began using the Community Supported Agriculture (CSA) method of distributing and marketing their produce. The effect on Louisiana vegetable farmers really can't be generalized as some did not fare well at all in 2020 and others found new marketing niches and thrived. The top three parishes in the state in terms of GFV of vegetable crops include:

- Tangipahoa Parish with 590 acres of planted vegetables totaling \$7.4 million GFV.
- Washington Parish with 925 acres of planted vegetables totaling \$4.9 million GFV.
- Iberia Parish (195 planted acres \$3.2 million GFV) and West Feliciana Parish (242 planted acres and also \$3.2 million GFV).

No matter where they reside, Louisiana vegetable farmers are a resilient group of people. We expect Louisiana vegetable production to sustain itself in years to come.

## Wheat

There were 52 producers that planted 12,011 acres of wheat in 2020. Compared to 49 producers and 14,005 acres in 2019. Average yield was 56.6 bushels per acre, similar to 54.8 bushels per acre in 2019. Scab (*Fusarium head blight*) was not as severe compared to 2019. Gross farm value was \$3.05 million, down from 2019.

## 2020 Progress Report

### Animal Commodities – 2016 – 2020

Year	Gross Farm Value	Value Added	Total Value
2016	\$1,666,233,748	\$954,843,009	\$2,621,076,757
2017	\$1,727,001,349	\$1,027,139,040	\$2,754,140,389
2018	\$1,822,635,846	\$1,148,062,770	\$2,970,698,616
2019	\$1,639,275,384	\$1,026,724,031	\$2,665,999,415
2020	\$1,587,198,822	\$925,285,066	\$2,512,483,888

### Fisheries and Wildlife Commodities – 2016 – 2020

Year	Gross Farm Value	Value Added	Total Value
2016	\$826,093,328	\$538,691,947	\$1,364,785,275
2017	\$885,406,580	\$585,241,055	\$1,470,647,635
2018	\$859,458,279	\$567,855,647	\$1,427,313,926
2019	\$852,789,977	\$568,746,680	\$1,421,536,657
2020	\$778,137,594	\$523,823,145	\$1,301,960,739

### Plant Commodities – 2016 – 2020

Year	Gross Farm Value	Value Added	Total Value
2016	\$3,427,809,340	\$3,550,661,820	\$6,978,741,160
2017	\$3,741,840,731	\$3,801,170,414	\$7,543,011,146
2018	\$3,677,627,295	\$3,594,395,625	\$7,272,022,920
2019	\$3,441,935,295	\$3,630,281,954	\$7,072,217,248
2020	\$3,581,089,826	\$3,515,764,024	\$7,096,853,849

### Progress Measured in Dollars for 5 Years Animal, Fisheries, Wildlife, and Plant Commodities

Year	Gross Farm Value	Value Added	Total Value
2016	\$5,920,136,416	\$5,044,196,776	\$10,964,333,192
2017	\$6,354,248,660	\$5,413,550,509	\$11,767,799,170
2018	\$6,359,721,419	\$5,310,314,042	\$11,670,035,461
2019	\$5,934,000,656	\$5,225,752,665	\$11,159,753,320
2020	\$5,946,426,242	\$4,964,872,235	\$10,911,298,476

--	----------------------

# Prices of Commodity Products

The gross form value of the commodities reported in the parish tables was computed based upon estimated annual per-unit prices. The state average prices listed below were used for most parishes for most commodities. However, a parish price was used if the parish price was significantly different from the state price.

Plant Enterprises Commodities		
Commodity	Unit	2020 Price
COTTON		
• Lint - Irrigated	lbs.	\$0.64
• Lint - Non-irrigated	lbs.	\$0.64
