## Anti-Cancer Extract Enhancer

### **Description:**

This invention is a method to greatly enhance the cancer fighting effectiveness of natural oil extracts and incorporate them into food. Confections and fried foods can gain an anti-carcinogenic benefit and still taste great. The extract does not require high doses to be effective, and there is no risk to normal cells or toxicity.

### **Advantage:**

- Reduces or slows progression of cancer
- Requires low doses

### **Commercial Uses:**

- Production of anti-cancer foods
- Anti-cancer cosmetics and topical applications

### **Intellectual Property on the Web:**
