Hybrid Seed Production Method

Description:

LSU AgCenter scientists have developed a new method to effectively produce hybrid cotton seeds. This approach will enhance cross pollination and isolate only the desired hybrid seed. It also ensures the most efficient use of labor and chemicals, allowing farmers to save money on both and ensuring quality seed to satisfy customer needs.

Advantage:

- Higher yield of hybrid seeds
- Enhances cross pollination
- Lower labor and chemical costs
- Simple to use

Commercial Uses:

- Production of hybrid cotton seed
