Potent Rice Weevil Control Formula

Inventor: Michael J. Stout

Description:

AgCenter scientists have developed an improved insecticide that is particularly effective against the rice water weevil. The insecticide is applied to plants shortly before a field is flooded. After application, the insecticide is quickly absorbed. This greater absorption may also reduce the necessary amount of chemical insect control agents used in treatments.

Advantages:

- Better rice water weevil control
- Less chemical control agents

Commercial Uses:

- Insecticide
