Superior Fish Attracting System

Inventors: Subramaniam Sathivel, Huaixia Yin, Luis a. Espinoza Rodezno

Description:

LSU AgCenter scientists have developed a system containing fish attracting materials that are released over time into water through a pail container. The materials contain biochemical and natural substances effective for attracting fish but can be modified to incorporate other chemical fish attractants to further enhance the effectiveness or tune fish species specificity. The release rate can also be changed to suit a fisherman's needs and potentially make a better catch.

Advantage:

- Potentially catches more fish
- Easy to change the type of fish caught

Commercial Uses:

- Commercial fishing
