

LOUISIANA SUMMARY

AGRICULTURE & NATURAL RESOURCES

2018

Agriculture: Backbone of Louisiana's Economy

This publication tabulates the value of Louisiana agriculture in 2018. Agents and specialists of the Louisiana Cooperative Extension Service, as well as other agencies — both private and public — compiled the data. Their analyses focus on the animal, forestry, fisheries, plant and wildlife commodities that constitute our vital agricultural industry. Agricultural and natural resource industries contribute significantly to our state's economy with the potential for increased economic benefits and job creation through value-added processing in urban and rural communities throughout Louisiana.

As has been a reoccurring theme over the last several years, the 2018 growing and harvest seasons had periods of favorable conditions and extended periods of extremely unfavorable conditions. For the most part, the 2018 planting season began favorably with adequate soil moisture, which helped move planting along at a brisk pace for many commodities. However, cooler than normal temperatures in March and much of April were noted as hampering crop development. Then, what seemed like an immediate switch, conditions turned very hot and dry. Despite the extremes in weather for much of the spring, the overall condition of most crops was excellent heading into the middle of summer. At that time, however, dry and hot conditions quickly changed as persistent rainfall began in later summer and continued through much of the fall. Those persistent rains affected harvest efficiency and crop quality for many commodities, particularly in the southern portion of the state.

Despite the challenging weather conditions in 2018, yields for nearly all the major row crop commodities were higher than the previous year. Total cotton lint yields were up over 20% from the previous year, rice yields were up 5.4%, grain sorghum yields were up 3.9%, and sugar yields were up 3.6% from 2017, a record high. Wheat yields were also significantly higher in 2018 after three consecutive years of lower than normal yields caused by adverse weather conditions and heightened disease pressure. Corn was the only major commodity that did not experience a yield increase as yield estimates for 2018 were down roughly 1.2% from the previous year. Even while down in 2018, corn yields remained above the five-year average. Yield per harvested acre was also up for soybeans and sweet potatoes. The soybean yield per harvested acre was up 4.1%, and sweet potatoes were up by nearly 16%. However, for both commodities, the number of acres that were abandoned and left unharvested were higher than normal because of persistent rains in late summer and fall that severely impacted quality. For sweet potatoes, normally about 1% to 2% of the planted acres are not harvested. In 2018, roughly 4% of the planted acres were not harvested. The situation was even more critical for soybeans. Normally, 2% to 3% of the planted acres are not harvested. In 2018, however, more than 11% of the acres were left unharvested. This 11% amounted to nearly 148,000 acres left unharvested, mostly in the southern part of the state. While the impact to soybeans was not widespread throughout the state, many of the producers affected in the southern part of the state were unable to harvest the majority of their soybean crop. For others, even in cases where they harvested soybeans, they could not find a market for them because of excessive grain damage. Finally, even for those commodities that had minimal yield and quality impacts, harvesting under wet conditions severely increased harvest costs and impacted harvest efficiency. This was particularly true in the case of sugarcane, where persistent and heavy rains caused significant harvest issues throughout most of the harvest season.

The persistent rain through much of the late summer and fall also was believed to have impacts on livestock operations and many fruit and vegetable operations. While the ample rainfall likely helped create ample grazing for livestock producers, it also likely limited hay production and quality. Hay yields were over 12% lower than the previous year. Several reports of missed or delayed hay cuttings because of rains likely not only impacted total yield but also hay quality. Several of the fruit and vegetable crops also experienced reduced yields in 2018, which were likely at least partially because of unfavorable weather conditions.

While commodity prices for most major row crop commodities remain at discounted levels from those seen in the mid-2010s, they did rebound marginally in 2018. Prices for cotton, corn, grain sorghum, rice and wheat were all marginally higher in 2018. Sugarcane and sweet potato prices were mostly unchanged from the previous year. Soybeans were the only major commodity that experienced a decrease in prices in 2018 from the previous year. This is primarily a function of high supply and reduced demand resulting from trade disagreements between the U.S.

and China. Also likely impacting the price for soybeans was the high level of quality damage experienced in the state, resulting in significant price discounts for much of the soybeans sold.

Prices in the 2018 for the livestock sector were mixed. Prices for steer and heifer calves were higher in 2018 as increased demand continued to support the market despite growing cattle and beef supplies. Prices for replacement and cull beef cattle were moderately lower in 2018 as the market continued to make adjustments in response to overall lower profitability in the cattle market over the last couple of years. Prices for all classes of swine here estimated higher in 2018 as improved demand and better overall market fundamentals helped to support that market. Likewise, prices for all classes of poultry saw improvement in prices as supply and demand fundamentals continue to improve for this sector. Prices for the sheep and goat industries were mostly steady to slightly lower from the previous year. Finally, milk and dairy cattle prices continued to struggle in 2018. Unfavorable supply and demand fundamentals continue to pressure milk prices and the overall strain on profitability continues to impact dairy cattle prices.

Prices for the fisheries and wildlife enterprises were mostly higher in 2018. Prices for both farm-raised and wild-caught crawfish were higher than the previous year despite continued growth in overall production totals. Continued market expansion for this commodity has helped offset the impact of growing production and supplies. Farm-raised alligators experienced price improvement in 2018 as stronger demand helped to support this market. However, the continued growth in farm-raised alligator production has likely reduced the market potential for wild-caught alligators and helped pressure prices down by 4% from the previous year. Most of the price increases experienced in the freshwater and marine fisheries were modest ranging from 1% to 2% over the previous year. Oysters did experience an 11% increase over the previous year as lower overall supplies and consistent demand helped push prices higher. Finally, honey prices continued to increase in 2018, up over 4% from the previous year. Increased interest in honey production and demand continues to provide strong fundamentals for this sector.

As is the case in most years, there are some commodities in 2018 that performed well both from a production and price standpoint and other commodities that faced significant challenges. This resulted in total gross farm values for different commodities and different commodity groups to vary significantly. Total gross farm value across all plant enterprises was down marginally (1.7%) from the previous year. While higher yields and prices pushed the gross farm value for many of the state's major row crop commodities higher, reductions for forestry and many other smaller plant enterprises more than offset these increases. The forestry sector saw significant reductions in total gross farm value as market dynamics altered demand schedules for different wood products, impacting both mill and stumpage values. Similarly, gross farm value across all fisheries and wildlife enterprises were down by roughly 3% from the previous year. Despite improvement in prices for most commodities, lower overall production compared to the previous year resulted in lower gross farm values for many fisheries commodities. The total gross farm value across all livestock enterprises was the only group that saw increases from the previous year. Stronger prices for beef cattle, poultry and swine led the way for a nearly 6% increase in gross farm value across all livestock enterprises. The increase in value of the livestock enterprises offset the reductions in plant and fisheries enterprises to leave the total gross farm value across the entire Louisiana food and fiber sector mostly unchanged from the previous year.

When the commodities produced by agricultural producers are cleaned, processed and packaged at the next stages of the marketing channel, these value-added activities create additional economic activity over and above that defined by the gross farm value. In 2018, these value-added activities were estimated to have an additional economic impact of \$5.3 billion. Taken together, the gross farm value and value-added activities were estimated to have a total economic impact of nearly \$11.7 billion. This represents less than a 1% decrease from 2017. Given the level of economic activity that the state's agriculture, forestry and fishery industries continue to generate each year, it is undeniable that they continue to be major contributors to the overall state economy. Cutting-edge research programs and extension education and outreach efforts of the LSU AgCenter remain critical to sustaining these economic benefits.

Many Louisiana communities depend on agriculture, forestry, fisheries and wildlife for local jobs and their economic well-being. However, for those who work in it day in and day out, agriculture, forestry and fisheries are far more than a business, a major job contributor and an economic engine. It truly is a way of life. Families have lived on many of these farms, forest lands or fishing villages for generations following a preferred way of life even though it means hard work, many hours, high risks and sometimes low incomes.

Each new production season has risks associated with commodity prices, trade agreements and higher input costs as well as uncertainty related to the weather. These conditions make the discovery and adoption of new agricultural technology developed by the LSU AgCenter more important than ever to our state's producers.

Agriculture is a highly sophisticated segment of the national and world economy, becoming increasingly so every year. That is the reason we at the LSU AgCenter continue to support agriculture and consumers with factual information provided by a well-trained faculty of extension agents, specialists and research scientists.

Those of us in the LSU AgCenter, with its major branches, the Louisiana Cooperative Extension Service and the Louisiana Agricultural Experiment Station, are proud to be part of the Louisiana agricultural industry, and we are committed to serving that industry and the citizens across the state of Louisiana in the years ahead.

A handwritten signature in black ink that reads "William B. Richardson". The signature is written in a cursive style with a large, prominent initial "W".

William B. Richardson, LSU Vice President for Agriculture

LOUISIANA SUMMARY

Agricultural and Natural Resources

2018

The statistical information in this summary was compiled from estimates made by extension agents of the LSU AgCenter after consulting with agricultural agency representatives, agricultural and agribusiness leaders, and others and after studying various reports and resource materials. State specialists with the LSU AgCenter checked parish-level data for specific commodities to ensure accuracy and consistency of all production information. A final review of the data was conducted by LSU AgCenter agricultural economist and project director Dr. Kurt Guidry in consultation with external sources, including state and federal statistical agencies. Any inquiries about the data in this publication should be directed to Dr. Guidry in the LSU AgCenter Department of Agricultural Economics. Dr. Guidry oversees the process of gathering all information for the Louisiana Summary.

Although this material is reasonably accurate and can be used for planning and other general informational purposes, this is not the official document of agricultural data for the state. Official statistical data are gathered, summarized and published by the U.S. Department of Agriculture National Agricultural Statistics Service, Delta Regional Field Office, 10800 Financial Centre Parkway, Suite 110, Little Rock, Arkansas, 72211. Reproduction or publication of information in this summary should acknowledge the Louisiana Summary as the source but indicate the unofficial nature of the statistics.

Gross farm value was calculated for each commodity, which in some cases included a value from natural resources and consequently may not represent income to farmers. Gross farm values were calculated using calendar-year, market-weighted, state-level average prices when available. When state-level price information was unavailable, price information was used from adjacent states (Texas, Arkansas or Mississippi) or the nation. Primary sources for prices were the USDA National Agricultural Statistics Service, USDA Agricultural Marketing Service and USDA Economic Research Service. The gross farm value is an indicator of the commodity's contribution to economic activity in the state but is not an indicator of farm profits. Production costs greatly affect profit (or loss) for all commodities. Even when gross income increases over previous years, corresponding increases in production costs may decrease farm profits.

In the state summaries, the value added in cleaning, processing, packaging, marketing and transporting commodities is an estimate of the total contribution of agriculture and natural resources to the state economy. The state summary may not be an exact summation of all parish reports as adjustments may occur because of changes in average prices received or to accommodate information from other sources. In each parish table only commodities that were of commercial economic value in that parish this year were listed. In some instances, the number of producers or the number of acres in a parish were not available. An asterisk was used to avoid releasing confidential information when too few producers were present for that commodity. Within some commodity groups, such as grains, fruits and commercial vegetables, the total number of producers has been omitted because some producers grow several different crops within the group. Adding together the producers of individual crops would not give a true total for the group.

NEW FOR 2018

A couple of changes were made to the publication for 2018. These changes were made to provide a more accurate depiction of the value of agricultural production in the state. A brief description of these changes is provided below.

- For sugarcane, values for both planted acres and harvested acres are reported. Traditionally, only harvested acres were provided as sugarcane is a multiyear crop that only plants a small portion of total acreage in any given year. However, of all the acres that are harvested each year, a portion of those acres are used for seed and not sold for sugar. To more accurately depict that situation, the values for planted acres are really all acres harvested in 2018 – those harvested for seed and those harvested for sugar. The values for harvested acres are, therefore, just those acres that are harvested and sold for sugar.
- Perique tobacco was added to the list of commodities included in the publication for 2018. While this is a small commodity, it has seen increased interest and profitability over the last few years. As such, estimates for production and gross farm value were included.

Animal Enterprises

Gross farm income for all animal enterprises was over \$1.82 billion for 2018, up 5.5% from \$1.73 billion in 2017. Value added was nearly \$1.15 billion for 2018, up from \$1.03 billion in 2017. Total value of all animal enterprises in the Louisiana economy was \$2.97 billion, up 7.9% from \$2.75 billion in 2017.

Beef Cattle

After several years of reduced inventory numbers in the early to mid-2010s because of adverse weather conditions, beef cattle inventory numbers have seen a gradual increase in Louisiana. Total beef cow inventory numbers increased again in 2018, totaling an estimated 576,525 head, up from 559,532 in 2017. The increases seen in cattle numbers in the state over the last several years have likely been driven by several factors. First, an improvement in weather conditions over the last several years has provided for more available forage production and has allowed producers to expand operations. Second, record level cattle prices in the mid-2010s helped to grow additional cattle numbers. And while prices have moderated from those levels, they remain at generally profitable levels. Finally, as the increased interest in locally grown foods has swept the country, there seems to be an increased interest in agricultural production and, particularly, beef cattle production by individuals not traditionally tied to agriculture.

The 2018 production year was generally viewed as favorable by the cattle industry. Ample rainfall throughout much of the year helped make forage readily available for most operations. In addition, low feed grain prices and moderately higher cattle prices helped to marginally improve overall cattle profitability. Strong beef demand helped to offset growing beef supplies and keep cattle and beef prices at or slightly above the previous year's levels. While market and production conditions were generally viewed as positive, there were some challenges for producers. Excessive rainfall in late summer and early fall likely limited hay production for many operations and delayed planting of fall pastures.

Louisiana remains primarily a cow-calf industry, with the majority of the cattle marketed in the year being calves weighing less than 700 pounds. Of the total estimated 583,396 head of beef cattle marketed in 2018, nearly 71% were steer and heifer calves weighing less than 700 pounds. The gross farm value of 214,998 steer calves sold in 2018 was \$157.8 million, an increase of roughly \$2.3 million from the \$155.5 million reported in 2017. The gross farm value of 198,618 heifers sold in 2018 was \$127.1 million, a decrease of roughly \$919,000 from the \$128.0 million reported in 2017.

In 2018, 63,835 yearling cattle (600 to 800 pounds each) sold for \$55 million, a decrease of roughly 710 head and \$6.4 million from 2017 levels. The number of cow-calf pairs sold in 2018 was reported at 46,148, up roughly 10,000 pairs from 2017. With the drastically higher number of cow-calf pairs sold in 2018, and only moderately lower prices, gross farm value increased to \$43.4 million, up roughly \$8.5 million from 2017. Finally, gross farm value income of both cull cows and cull bulls were down marginally in 2018 because of slightly lower prices. Gross farm value for cull cows was reported at \$23.6 million, while gross farm income for cull bulls was \$6.8 million.

When added across all classes of beef cattle, the total gross farm value generated by the beef cattle industry in 2018 was estimated at \$413.7 million, a roughly \$1.5 million increase from 2017. This is the first increase in gross farm value in the last three years and provides some glimpse of hope that the beef cattle industry is starting to stabilize after several years of tremendous volatility in both production and prices. When value-added activities of \$51.7 million are added to gross farm income, the total economic impact of the beef industry in Louisiana during 2018 was estimated at \$465.4 million.

Dairy

Milk production was reported by nine parishes in 2018. Three parishes in the southeastern part of the state and one parish in the northwestern part accounted for more than 90% of the herds, cows and milk produced. The number of dairy farms declined from 101 in 2017 to 92 in 2018. The number of milking cows decreased from 11,243 head in 2017 to 10,296 head in 2018. Total milk production decreased from 155.8 million pounds in 2017 to 151.4 million pounds in 2018. The on-farm value of milk decreased by \$1.9 million from \$28.0 million in 2017, compared to \$26.1 million in 2018. The decrease in the on-farm value of milk in 2018 was due to a 4.17% reduction in milk price and a reduction in milk production of about 4.4 million pounds for 2018 as compared to the previous year.

Animal Enterprises

The value of cull cows, bred heifers, mature cows, and breeding age bulls and calves was about \$3.3 million. The total value of milk and animal sales to Louisiana dairy producers was \$29.4 million. Value added contributed over \$47.3 million more. The total economic contribution from dairying in Louisiana, including milk sales, animal sales and additional processing was \$76.7 million, a decrease of over \$6.4 million, compared to the previous year.

Another component to the state's dairy industry has been the production of goat's milk. While small compared to the dairy cattle industry, dairy goat production has continued to be a viable industry in the state. In 2018, dairy goats were raised by 37 producers. A total of 525 does were reported to have been milked during 2018, producing slightly over 604,000 pounds of goat milk. The gross farm income of the dairy goat industry was estimated at \$0.31 million in 2018, down from the nearly \$0.34 million generated in 2017.

When combined, milk production from cattle, milk production from goats, and the sale of dairy cattle animals generated a gross farm value of \$29.7 million in 2018, down from the \$32.1 million generated in 2017. Value-added activities associated with the dairy industry contributed another \$47.8 million in economic activity to the state in 2018. Total economic activity (gross farm value plus value added) of the Louisiana dairy (dairy cattle and goats) industry was estimated at \$77.5 million in 2018, down from \$83.9 million in 2017.

Horses

The horse industry continues to be a significant component of the agricultural economy in Louisiana. The horse industry has traditionally been categorized into three sectors: racing, show or competition, and recreational. In terms of number of horse owners, the breakdown of the industry in 2018 into these three sectors was 9% racing, 14% show or competition, and 77% recreational. While the racing sector was the smallest sector in terms of number of horse owners, it presented the largest share of gross farm value generated by the horse industry. In 2018, the breakdown of the horse industry by percentage of total gross farm value generated by each sector was 49% racing, 29% show or competition, and 22% recreational.

The state's racehorse industry in 2018 involved 1,599 breeders who owned 8,718 mares that produced 6,284 foals that sold for \$37.7 million. Breeders also owned 1,081 stallions that were bred to 8,052 mares, generating income from stud fees of \$20.1 million. The total gross farm value generated from racehorse production was \$57.8 million. An additional 2,212 racehorse owners had 10,927 racehorses in training or on the track in Louisiana, with a gross farm value of \$109.3 million. The gross farm value of the entire race sector (owners' and breeders' activities) of the horse industry in 2018 was \$167.1 million, not including receipts or fees from racing events or gaming.

The show and competition horse industry (horse shows, barrel racing, cutting, roping, team penning and others) includes 1,338 breeders who own 4,785 mares that produced 3,617 foals that sold for \$14.5 million during 2018. These breeders owned 606 stallions that bred with 3,508 mares, generating \$5.3 million in income from stud fees. The total income generated from show and competition horse production was \$19.7 million. Another 4,584 owners competed on their 15,354 horses, which had a gross farm value of \$76.8 million. The total gross farm value of the show and competition sector of the horse industry was \$96.5 million in 2018.

A large portion of the horse industry, both in terms of owners and horses, is recreational. Horses have been used for comfort, exercise and enjoyment for quite some time. Approximately 9,644 recreational horse owners in Louisiana bred 22,155 mares and sold 16,207 foals during 2018 for \$17.8 million. These horse enthusiasts owned 2,799 stallions that were bred to 7,636 mares, generating income from stud fees of \$3.8 million. The total income from production in the recreational horse industry was \$21.6 million during 2018. Another 22,885 recreational horse owners have 47,955 horses valued at \$52.8 million, making the total economic contribution of the recreational horse industry \$74.4 million in 2018.

There were 19,540 horses in Louisiana owned by 42,462 people with a gross farm value of \$338 million in 2018. Value-added activities contributed an additional \$37.2 million in 2018. Combining farm-gate value and the value added, the total value of the horse sector was \$375.2 million in 2018.

In addition to the estimates of gross farm value and value-added activities, there are other potential impacts of the horse industry to the state's economy. First, the average horse owner has been reported to spend about \$4,000 to \$6,000 annually on items such as feed, tack, equipment, veterinary supplies and medicines. Second, the four racetracks in the state employ a large number of people and have been reported to generate expenditures of

Animal Enterprises

over \$1 billion annually. Finally, the show and competition industry conducts numerous events and activities each year and is estimated to generate \$200 million annually in expenditures. The American Horse Council suggests that the total economic impact of horse production and these related activities is in excess of \$2 billion annually for the state of Louisiana.

Poultry

Broilers and Eggs

Poultry production continues to be the largest animal agricultural industry in Louisiana and is second only to forestry in total economic value for all agricultural commodities. In 2018 poultry production surpassed forestry in gross farm value to claim the top spot. In 2018, 620 Louisiana growers (small producers and commercial operations) produced 957.1 million pounds of broiler meat with a gross farm value of \$937.9 million. Commercial broilers are produced in 11 parishes: Bienville, Claiborne, Jackson, Lincoln, Natchitoches, Ouachita, Sabine, Union, Vernon, Webster and Winn.

While broiler production is far and away the largest component of the poultry industry in the state, there are several other components that positively contribute to the state's economy. A total of 176 breeder flock producers in 2018 produced 20 million dozen hatching eggs with a gross farm value of \$51.6 million. A total of 99 pullet producers produced more than 1.2 million pullets with a gross farm value of \$18.5 million. Finally, a total of 732 egg producers (small producers and commercial operations) had a total table egg production value of nearly 22 million dozens valued at \$27.6 million.

When all facets of the poultry industry are combined, the total gross farm value was estimated at \$1.03 billion in 2018, up nearly \$132 million from 2017. Causes of the increase in gross farm value include a 49% increase in edible egg prices along with an across-the-board increase in overall production coupled with a modest increase in gross farm value of products produced. Value-added activities associated with poultry production added an additional \$1.01 billion in economic activity in the state, bringing the total economic impact of the poultry industry to \$2.05 billion in 2018.

Quail

Quail production in the state generally consists of smaller operations reaching niche markets. In 2018, a total of 15,695 quail were estimated to be produced and sold by 16 producers, resulting in a gross farm value of \$43,318. Value-added activities associated with quail production provided an additional \$4,765, bringing the total economic contribution of the quail industry to \$48,083 in 2018.

Rabbits

The production of rabbits for meat and exhibition involved 441 Louisiana producers during 2018. The rabbit fryer industry produced approximately 32,790 pounds of meat in 2018. Louisiana rabbit producers generated \$110,634 in gross farm income. With value-added activities contributing \$11,617, the total value of rabbit production in Louisiana during 2018 was \$122,251.

Sheep and Goats

Sheep and lambs and wool were produced by 263 producers in 35 Louisiana parishes during 2018, compared to 270 in 2017. The total number of lambs that were marketed (slaughter, feeder and club or show lambs) was estimated to be 4,425 in 2018, which shows a gradual increase over the last two years. This year that industry had a gross farm value of \$846,036. With a gross farm value of \$45,024, the 361 head of stocker sheep sold in 2018 represented a slight decrease in value from the previous year. The number of cull sheep sold in 2018 was 637, up from 556 in 2017. Cull sheep sold for \$63,560 in 2018. Wool production from 2,415 sheep produced 14,533 pounds of wool, which was down from 2,777 sheep and over 18,000 pounds of wool in 2017. The total gross farm value of the sheep industry was estimated at \$962,613, down slightly from \$989,628 in 2017.

Animal Enterprises

The Louisiana goat industry during 2018 consisted of an estimated 834 producers in 59 parishes, up from 827 producers in 2017 with an inventory of 10,818 breeding-aged does. Goat producers marketed a total of 6,162 slaughter goats valued at 908,340. The number of goats slaughtered was up slightly from 2017. Stocker goats sold in 2018 numbered 2,834 with a value of \$475,772. There were 1,303 cull goats marketed in 2018 at a value of \$168,856, both slightly down from previous year. Goats sold as club or show goats numbered 1,225 head, valued at \$398,125. Gross farm value of goats sold in Louisiana during 2018 was \$1.95 million, down slightly from the \$2.04 million estimate in 2017.

Swine

The Louisiana swine industry is primarily composed of relatively small producers. In 2017, a total of 265 producers were estimated to have a total inventory of 1,765 sows with an average sow inventory per producer of fewer than 7 sows. Other than servicing a local or niche market, most of the swine production in the state is targeted to the show or club pig market. In 2017, a total of 2,344 show pigs were estimated to be sold with a gross farm value of \$703,200, representing roughly 55% of the total gross farm value generated by the swine industry. Sales of feeder pigs, slaughter hogs and culls represent the remaining 45% of the total gross farm value generated by the industry. In 2018, 5,347 feeder pigs were sold for an estimated value of \$74,623. Sales of 2,821 slaughter hogs generated a gross farm value of \$349,567 while the sale of 806 cull animals (sows and boars) generated a gross farm value of \$114,983.

When added together, the gross farm value of all classes of swine is estimated at \$1.27 million for 2018, up from \$1.15 million in 2017. Value-added activities associated with the swine industry are estimated at \$159,047, bringing the total economic impact of the industry to the state economy to \$1.43 million.

Exotic Animals

While still a relatively small component of the total agricultural industry, exotic animal enterprises did see marginally increases in 2017. The number of producers statewide was estimated at 47 in 2018, up from 22 in the previous year. In addition, the total number of animals marketed increased from 515 in 2017 to 690 in 2018. The total gross farm value was estimated at \$138,500 in 2018, up from \$103,500 in 2017. The total value of production for exotic animals, including value-added activities, is estimated at \$153,043 for 2018.

Fisheries and Wildlife Enterprises

Total farm value of all fisheries and wildlife enterprises during 2018 was \$859.5 million, down 2.9% from \$885.4 million in 2017. Value added in 2018 was \$567.9 million, down slightly from \$585.2 million the preceding year. Total value of all fisheries and wildlife enterprises to the Louisiana economy for 2018 was \$1.43 billion, down marginally from the \$1.47 in 2016.

Aquaculture

Louisiana has long been recognized for supporting one of the most diverse aquaculture industries in the United States. Species and products such as crawfish, catfish, alligators, oysters, tilapia, baitfish, soft-shelled crawfish and crabs, ornamental fish, baby turtles, a variety of freshwater game fish, and other minor species all have been commercialized successfully. Louisiana producers continue to be among the leaders in the nation in crawfish, oyster, pet turtle and alligator sales.

Farm-raised crawfish continued to be the state's most valuable aquaculture sector in 2018, representing roughly 52% of the total gross farm value generated across all commercial aquaculture enterprises. Growth in demand, both within the state and regionally, has created increasing incentive for expansion of acreage and production over the last several years. Crawfish production has increasingly been incorporated into other farming operations in recent years as producers look to offset struggling rice markets. Estimates from the field in 2018 indicated farm-raised crawfish production occupied a record 237,234 acres, up 6.6% from the previous year. Total production was up almost 20% from the previous year at 151.8 million pounds, and gross farm value for farmed crawfish was \$209 million, representing an all-time high.

A total of 442,876 farmed alligators were harvested in 2018. Farm-raised alligators were once again the second-largest segment of Louisiana's aquaculture industry, with an estimated gross farm value of \$102.3 million, up over 23% from 2017. Production volume for farm-raised alligators, at 2.01 million feet, was virtually unchanged from the prior year.

Oyster production typically represents the third largest segment of Louisiana's aquaculture industry. The oyster production information reported in this summary represents a one-year lag. Information on Louisiana oyster harvests and sales is compiled by the Louisiana Department of Wildlife and Fisheries and provided to the National Marine Fisheries Service, but the final compilation of the data is not available until the middle of the following year. Oyster sales in 2017 reached 2.06 million sacks from a total of 947 producers, valued at \$84.3 million. These numbers represented 10% and 23% increases, respectively, in production and value.

While the remaining segments of the aquaculture industry continue to provide positive economic impacts to the state, they are significantly smaller than crawfish, alligators and oyster production. Pet turtle hatchling production declined again in 2018, with estimated sales of 1.7 million animals and a gross farm value of \$1.9 million, decreases of 15% and 17%, respectively, from the previous year. Many licensed turtle operations continue to be inactive at this time. Fish bait production continues to evolve to meet the demands of recreational fishers, with most production held in recirculating or flow-through systems prior to sale. In 2018, the estimated gross farm value of the fish bait industry was \$1.6 million, down significantly from the prior year. The catfish and minnow industries displayed modest growth in production and gross farm values. In 2018, the gross farm value of the Louisiana catfish industry was \$543,000, while that of the minnow industry was \$55,200. These industries are not expected to grow significantly in the coming years because they have been forced to compete with more consolidated and concentrated competitors in other states.

"Other aquaculture species" include products such as game fish fingerlings, tilapia, ornamental fish, soft-shell crabs and crawfish, and other minor species. Each has a very limited number of producers. Private ponds are found throughout Louisiana, with an estimated 127,200 ponds totaling 42,400 acres. Although these private ponds are not included in the 2018 state total, their economic value was estimated to be \$65.1 million based on fish yields, comparative recreational expenditures and enhancements to property values.

Examining the economic impact across all commercial enterprises indicates that the total gross farm value of Louisiana aquaculture in 2018 was \$401.9 million, up 22% from the previous year. Value-added activities associated with aquaculture products added an additional \$271.3 million to the state's economy, bringing the total impact of Louisiana's commercial aquaculture to \$673.2 million in 2018.

Fisheries and Wildlife Enterprises

Fisheries

The harvest of freshwater and marine finfish and shellfish in Louisiana continues to contribute significantly to the state's economy. Fishery landings are recorded by two government agencies. The Louisiana Department of Wildlife and Fisheries receives monthly reports from the initial buyers (processors, dealers, etc.), who are required to record every transaction via trip tickets. Species weights and dockside sales values of the landings are reported for all commercially harvested species. The National Marine Fisheries Service also is responsible for estimating fisheries landings, using both regional National Marine Fisheries Service data collectors and Louisiana Department of Wildlife and Fisheries reports. The information reported here is from those two cooperating sources. All this data is provisional and subject to change.

The freshwater and marine fisheries data presented in the report this year reflect the calendar year 2017. The one-year lag is necessary to ensure data accuracy. Real-time reports on fisheries landings are not available until four months after the fact, and final data often runs six to seven months behind. Estimating landings for the second half of the year based on landings reports from the first half is inaccurate. This method of reporting fisheries landings data has been in place since the 2004 Louisiana Summary. Data prior to that volume may not be directly comparable to the data reported since 2004 because of different estimation methods. To compare state-level landings for years prior to 2004 on a calendar-year basis, please consult the U.S. National Oceanic and Atmospheric Administration National Marine Fisheries Service website.

One final caveat is that parish totals for fisheries landings will not equal the state total because of legal confidentiality requirements. When there are fewer than three sources in a parish that report landings of a fisheries commodity, the number of landings cannot be publicly released by the Louisiana Department of Wildlife and Fisheries without breaking confidentiality requirements. There may also be parishes reported in this volume for which no landings or values were provided by either of those agencies but for which there was catch. Furthermore, fisheries landings are reported for the parish in which the fish are offloaded, not the parish in which the boat and its crew may be domiciled or the parish where the catches actually were made. However, producer estimates are based on commercial licenses, which are based on the fishermen's domicile.

Freshwater Fisheries

The freshwater finfish are primarily bowfin, catfish, buffalo, shad, gar and carp and are less valuable on a per-pound basis than marine finfish. Total freshwater finfish value increased significantly (up 14.21%) from \$5.08 million for 10.8 million pounds caught by 2,349 commercial fishermen in 2016 to \$5.8 million for 12.1 million pounds in 2017. The number of fishermen decreased slightly to 2,183. In addition to the higher landings in 2017, the average price per pound was up \$0.01 from the previous year to \$0.48 per pound.

Catfish are the mainstay of the more valuable freshwater species. The commercially caught catfish are not the same as farm-raised catfish described in the aquaculture section of this summary. Sales of catfish caught commercially in Louisiana waters were \$2.6 million for 4.9 million pounds, only a slight change from \$2.7 million for 4.88 million pounds in 2016.

Most wild crawfish are caught in the Atchafalaya Basin, where water levels fluctuate as inflows are controlled by the U.S. Army Corp of Engineers at one-third of the combined flows of the Mississippi and Red Rivers. Although wild crawfish compete in the marketplace with farm-raised crawfish, some consumers prefer the wild product because of its frequently larger size. The volume of the wild crawfish harvest is almost completely constrained by the timing and duration of the annual winter and spring floodwater event in the Atchafalaya Basin. After a good 2016 season, landings were down 37%, and value was up 2% in 2017. In 2016, 13.6 million pounds of crawfish were landed for a value of \$11.9 million, compared to 8.6 million pounds of crawfish landed for a value of \$12.1 million in 2017. Landings in 2014 were 11.2 million pounds with sales at \$13.4 million. The 2013 crawfish season (17.1 million pounds) nearly tripled the landings from 2012 (6.5 million pounds). For comparison, freshwater crawfish landings were a record level of 50 million pounds in 1993.

Overall, landings from the freshwater fisheries sector in 2017 had a gross value of \$17.9 million.

Fisheries and Wildlife Enterprises

Marine Fisheries

The last few years have seen a lot of flux within marine fisheries with the 2010 Deepwater Horizon oil spill leading to record low catches because of closures and perception for most fisheries. However, marine fisheries grounds were almost all reopened in 2011, and all marine fisheries saw an increase in landings in 2011 and 2012, compared to 2010. The final closed areas of Louisiana opened in 2015. Marine finfish landings for food are varied and complex, with about 60 different species being landed for a total of 10.6 million pounds in 2017, excluding menhaden. This was a 15% decline from 2016, when 12.6 million pounds of marine finfish were landed in Louisiana. Excluding menhaden, the five most valued species landed in 2017, by decreasing value, were red snapper, black drum, yellowfin tuna, king mackerel and striped mullet. Total saltwater finfish landings, excluding menhaden, were valued at \$18.0 million, a 15.5% decrease from \$21.3 million in 2016.

Landings of menhaden, or poggy, a low value but high-volume nonfood finfish species, were in 716 million pounds in 2017, a 33% decrease from 1 billion pounds in 2016. The catch was valued at \$64.4 million in 2017, a decrease of 49.8% from \$128 million in 2016. After several years of increase, menhaden value decreased in 2017 to 8.5 cents per pound. Menhaden was 12.4 cents per pound in 2016, 9.5 cents per pound in 2015 and 10.8 cents per pound in 2014. Menhaden oil and meal are sold on the world market for industrial purposes, animal feeds and omega-3 dietary supplements, among other uses, and the prices received for menhaden products is a function of the world supply of oils and meals, particularly those produced by the fisheries for the anchoveta of the Pacific Coast of South America.

After several poor harvest years following the freshwater diversion openings in 2010 and 2011, oysters had an 11% increase in 2017 to 13.3 million pounds (2.1 million 50-pound sacks). This is still an increase compared to previous years as in 2013 and 2014, 11.3 million pounds of oysters were landed. The price in 2017 increased to \$6.33 per pound of oyster meat (\$40.96 per 50-pound sack) in 2017, compared to \$5.69 per pound (\$36.79 per 50-pound sack) in 2016. To calculate prices per sack, an assumption of 6.47 pounds of shucked oyster meat per sack was used. According to U.S.-NOAA-NMFS, the gross value of oysters harvested during 2017 was \$84.3 million — up 23% from \$68.5 million in 2016.

Blue crabs constitute nearly all the Louisiana crab harvest, with stone crab claws making up less than 0.01%. Louisiana hard crab landings normally range from 40 to 50 million pounds. However, stock assessments show stocks fell below acceptable levels in 2012 and 2014 and were overfished in 2013 and 2015. Blue crab landings were 44.1 million pounds with a gross value of \$54.2 million in 2017 by 2,548 license holders, a 10% increase in landings and value from 40.1 million pounds with a gross value of \$49.4 million in 2016. While 2017 landings were back in the 40- to 50-million-pound range, they were still lower than when fishers harvested 51 million pounds in 2009 or 43.8 million pounds in 2008.

Peeler or buster crabs are blue crabs that are close to molting their shells. These crabs are sold to soft-shell facilities to produce soft-shell crab. In 2016, the soft-shell industry continued to see declines from 145,090 pounds of peeler crabs and 10,865 pounds of soft shell in 2016 to 24,119 pounds of peeler crabs and 10,171 pounds of soft shell in 2017. In 2009, production of soft-shelled crabs (35,484 pounds) and peeler crabs for the shedding business (171,656 pounds) had increased from the lowest ever recorded in 2008 due to many shore-side shedding facilities being damaged or destroyed by the 2005 and 2008 storms. Hurricane Isaac in the fall of 2012 may have affected shedding facilities, too. Overall, the soft-shell crab industry has been in steady decline for at least two decades.

Louisiana shrimp landings in 2017 consisted of six species: white shrimp, brown shrimp, sea bobs, pink shrimp, roughneck shrimp and other (either royal reds or rock). White shrimp historically have provided 50% to 60% of the harvest by weight and around 70% by value. In 2017, white shrimp contributed about 73% (68.8 million pounds) of total weight and 84% (\$112.2 million) of total value. In 2017, brown shrimp landings totaled 24.9 million pounds with a value of \$21.6 million dockside. Total shrimp landings in 2017 were 94.4 million pounds, down 3% from 2016 when 97.5 million pounds were harvested. By comparison, 74.2 million pounds of shrimp were harvested in 2010, when most of the fishing grounds were closed for at least at some point in the year because of the oil spill, and 114 million pounds in 2009. Shrimp landed in Louisiana had a gross value of \$134.0 million in 2017, down 3% from 2016. The higher prices in 2013 and 2014 in Louisiana were a result of the decline in imported farmed shrimp because of disease issues in Asia and South America. The weighted-average price for shrimp was \$1.42, almost identical to \$1.41 in 2016, up from \$1.24 in 2015, down from \$2.08 in 2014, \$1.81 in 2013, and \$1.45 in 2010-2012.

In 2017, marine fisheries landings in Louisiana were valued at \$355.1 million dockside, down from \$405 million in 2016.

Fisheries and Wildlife Enterprises

Fur

As reported by the Louisiana Department of Wildlife and Fisheries, the total value of the 2017-18 furbearer harvest was estimated at \$50,394, down slightly from \$57,948 reported during the previous year. This value represents total pelts across all species shipped out of state by fur dealers and individuals but does not include income associated with meat production from harvested furbearers.

The total number of trapping licenses sold increased slightly this year from 2,133 licenses reported in 2016-17 to 2,374 reported in 2017-18. However, the total number of pelts harvested in 2017-18 was slightly lower at 5,542 pelts, compared to 6,189 pelts harvested in 2016-17. The average price paid for a single pelt taken during the 2017-18 trapping season was \$9.09, down slightly from \$9.36 the previous year but \$2.15 per pelt higher than the 10-year average. The 10-year average price per pelt ranged across species ranged from \$0.52 for Virginia opossum to \$29.59 for bobcat.

The total nutria harvested during the 2017-18 season was 170,471, which is down substantially from last year's total of 216,052 and the 2015-16 total of 349,235. The average price per nutria pelt was \$2, and an additional \$5 was paid for each nutria harvested under the Coastwide Nutria Control Program, resulting in \$852,355 paid in incentive payments to 263 participants.

Hunting Lease Enterprises

The value of recreational hunting in Louisiana is estimated by the income derived from hunting lease enterprises. The number of producers who leased land in the state during the 2017-18 hunting season was estimated at 5,905, down slightly from 5,912 reported during the 2016-17 hunting season. This figure consists of 4,415 individuals who leased their land for upland game hunting (primarily white-tailed deer and wild turkey) and 1,490 individuals who leased their land for waterfowl hunting.

In 2017-18, approximately 6.2 million acres were leased for upland game hunting and approximately 1.8 acres were leased for waterfowl hunting. Both estimates are down from the previous year when approximately 7.9 million acres were leased for upland game hunting and approximately 1.9 million acres were leased for waterfowl hunting. In 2017-18, the estimated value for upland game hunting leases was \$107.7 million and \$52.4 million for waterfowl. These estimates are substantially lower than 2016-17, when the estimated value for upland game hunting leases was \$138.2 million and the estimated value for waterfowl hunting leases was \$55.2 million. The estimated price per acre of leased land for hunting purposes in 2017-18 was similar to estimates from 2016-17 at \$17.50 per acre for upland game and \$28.40 per acre for waterfowl.

Honey

The production of honey in 2018 was 2.78 million pounds. This production was 9.9% down from the production in 2017 (3.09 million pounds). Weather was friendlier to beekeepers in 2018. There were no large-scale flooding events to inundate apiaries.

The wholesale price of honey in 2018 was estimated at \$1.75 per pound, up from \$1.68 in 2017. In addition to the value of the honey, other value can be generated by beekeepers in the sale of queens and bees. While not included in the Ag Summary calculations, the current prices of queens are estimated at \$35 per queen while the price of a five-framed nucleus colony ranges from \$150 to \$160. The number of hives estimated in 2018 was 35,841, down slightly from the 38,324 estimated in 2017. The number of beekeepers commercially selling honey was estimated at 986, also down from the 1,077 estimated in 2017.

Some people seek to become hobby beekeepers. AgCenter agents refer them to local bee clubs for classes. The purported anti-allergenic properties of local honey is a leading reason that local honey is purchased. There was a good attendance to the 22nd Annual Field Day at the USDA Honey Bee Lab in Baton Rouge. This event attracts beekeepers from novices to long-time beekeepers.

Interest in beekeeping continues to grow. LSU had its first beekeeping class in the fall of 2018. This class was an upper level class for upperclassmen and graduate students with seven attending. This program partnered with the USDA Honey Bee Lab in Baton Rouge to provide experience in a working bee yard. McNeese State University also

Fisheries and Wildlife Enterprises

has a beekeeping program and relies on local volunteers to bring instruction about the importance of pollinators to agriculture and to help with beekeeping skills. Recertification workshops for private pesticide applicators includes pollinator protection because the Louisiana Department of Agriculture and Forestry now requires extension agents to bring this training to agricultural producers. This training reinforces the concept of reading the label. New labels include narratives on protecting pollinators.

Small hive beetles and Varroa mites were observed to be in numbers similar to last year. Africanized honeybees were not discovered in Louisiana in 2018. Several viruses were found in bees throughout the state. Beekeepers are using integrated pest management practices to manage bee pests. The USDA Agricultural Research Service Bee Breeding and Physiology Laboratory is continuing research bee pests with an emphasis on integrated pest management. AgCenter faculty and volunteer beekeepers are providing training in beekeeping through a basic program presented to bee clubs.

Homeowners, realtors and other property owners continue to refer complaints about honeybee infestations to AgCenter offices and to beekeepers. Some beekeepers have businesses to remove bees and then hive them for production. The population status of honeybees seems to be strong in Louisiana.

A list of beekeepers who remove colonies and collect swarms is maintained by the LSU AgCenter on its website. The list provides contact information such as name and phone number, areas they will cover and is by area of the state.

In general, the AgSummary includes information on the economic value of honey. Gross farm value for 2018 was estimated at \$4.87 million, down from \$5.19 million in 2017. When value-added activities are added, the total economic impact of honey enterprises was estimated at \$6.09 million. As mentioned previously, other values of beekeeping include pollination services, the sale of fertilized queen bees, package bees and hive nuclei (commonly called "hive nucs"), and the sale of wax, propolis, pollen and other hive products.

Plant Enterprises

The gross farm value of all plant enterprises was more than \$3.74 billion in 2017, an increase of 9.2% from \$3.43 billion in 2016. Value added was \$3.80 billion for all plant commodities during 2017, up from \$3.55 billion in 2016. Total value of all plant or crop enterprises to the Louisiana economy was \$7.54 billion in 2017, up 8% from \$6.98 billion in 2016.

Cotton

In 2018, 190,567 acres of cotton was harvested in the state of Louisiana, which compares to 212,404 acres in 2017 and 139,902 acres in 2016. Fifty-two percent of the acres in 2018 were irrigated. Yields across irrigated and dryland acres averaged 1,115 pounds of lint per acre, which compares to 926 and 990 pounds of lint per acre in 2017 and 2016, respectively.

Gross farm value of cotton lint sales was \$157.2 million in 2018, with \$86.6 million from lint harvested on irrigated land and \$70.6 million from sales of lint harvested from nonirrigated land. Sales of cotton seed contributed an additional \$27.2 million. Gross farm value of all cotton sales was \$184.4 million, with value added contributing \$46.1 million, so that total value of cotton production in 2018 was \$230.5 million.

Feed Grains

In 2018, there were 441,051 acres of feed grains harvested in the state, down from 498,816 acres harvested in 2017. Acres were lower in 2018 versus the previous year for all three feed grains. Corn led the way with nearly 53,000 fewer acres harvested in 2018. Grain sorghum harvested acres were down by nearly 4,000 acres, while oat acres were down by slightly less than 1,000 acres. For all the commodities, the lower acres were predominately a function of unfavorable market conditions.

Despite relatively strong yields and slightly higher prices in 2018 for feed grains, lower acreage and lower total production helped to reduce overall gross farm value from the previous year. The gross farm value for all feed grains was estimated at \$302.0 million in 2018, down 4.65% from the previous year. Value added for feed grains was estimated to be \$52.8 million in 2018, so the total value, including both gross farm value and value added, of feed grain production in Louisiana for the year was \$354.8 million, down from \$372.1 million in 2017.

Corn

There were 431,316 acres of corn harvested in 2018, which compares to 484,221 in 2017 and 544,601 acres in 2016. Corn yields in 2018 averaged 182.8 bushels per acre, which is slightly below the 2017 crop that averaged 185.1 bushels per acre. Approximately 72% of the corn acres is produced on irrigated land. For the past seven years, corn yields in Louisiana have averaged 177.3 bushels per acre.

Gross farm value of corn production in 2018 was \$298.8 million, down slightly from the 2017 value of \$312.8 million. Excellent corn yields help to offset lower acreage and slightly lower prices to limit a significant reduction in gross farm value.

Grain Sorghum

In 2018, 8,657 acres of grain sorghum were harvested throughout the state. This compares to 12,565 acres harvested in 2017 and 49,389 acres in 2016. This is the seventh year in a row that grain sorghum acres have declined in Louisiana. Grain sorghum yields in 2018 averaged 92.3 bushels per acre — above the 2017 crop, which averaged 88.9 bushels and slightly below the 2016 crop, which averaged 92.8 bushels per acre.

Gross farm value of sorghum production was \$2.9 million, down substantially from \$3.6 million in 2017, because of lower acreage and lower total production.

Oats

In 2018, seven producers planted 1,078 acres of oats in the state. This was down substantially from the 20,29 acres harvested and the 11 producers in 2017. The average oat yield in 2018 was 61.2 bushels per acre, compared to

Plant Enterprises

52.2 bushels reported in 2017. Gross farm value of oat production was \$185,642 in 2018, compared to \$265,663 in the previous year.

Forestry

The projected Louisiana gross farm value of harvested forest products decreased by 7.06% during the 2018 calendar year, ending the year at \$868.4 million dollars in mill-delivered revenue. In terms of grade stumpage products, the story was rather mixed, with both pine and hardwood sawtimber showing large swings. The pine sawtimber harvest decreased by 13% from the prior year and posted a total statewide harvest of approximately 860.1 million board feet during 2018. However, the hardwood sawtimber harvest increased during 2018, a 31% increase to 100.3 million board feet. Unlike the other two products, pine chip-and-saw remained relatively flat. It is believed that many mills are moving to smaller diameter wood due to 2x4 prices and this may be some evidence of that behavior. Pine chip-and-saw harvested during 2018 totaled 964,862 cords, a decrease of approximately 1% from 2017 levels.

The total pulpwood harvest was 5.63 million cords, down 146,357 cords (3%) from the 2016 harvest. Pine pulpwood harvest decreased 3%, from 4.98 million cords during 2017 to 4.85 million cords in 2018. Hardwood pulpwood harvest decreased by 2%, from 796,451 cords in 2017 to 779,334 cords in 2018.

Stumpage prices paid for pine sawtimber during 2018 averaged \$193 per thousand board feet, down slightly from the prior year continuing a trend over the last two years. This average represents approximately a 1.78% decrease from the previous year (\$196.5 per thousand board feet). Prices paid for mixed hardwood sawtimber during 2017 averaged \$280.75 per thousand, which is a 6.34% decrease from the previous year (\$299.75 per thousand). Pine chip-and-saw averaged \$48.73 per thousand in 2018, which was down \$1.34 from the previous year. Pulpwood stumpage prices averaged \$24.51 per cord per for pine, down 10.24% from the previous year, while hardwood pulpwood averaged \$29.09 per cord, up 10.21% from the previous year's average.

In general, delivered prices were mixed across all three sawtimber class products over the period reported (pine sawtimber down 2.43%, oak hardwood up 4.6%, mixed hardwood down 0.47% and chip-and-saw down 3%). In terms of pulpwood products, hardwood pulpwood was up approximately 5.6% and pine pulpwood was down 3.5%.

As a caution, individual landowners should not look at Timber Mart South Prices as an indication of what they will get for timber sold on their land, but rather as a gauge to judge price trends and directions. Timber owners should contact a consulting forester who can help them best gauge the market for their timber as the prices received for individual tracts varies considerably depending on local market conditions and specifics of their individual property.

During the year, private forest landowners in Louisiana received an estimated \$384.59 million from the sale of forest timber (stumpage), down 8.79% from the \$421.65 million in the previous year. Timber harvesting contractors and their employees earned approximately \$483.82 million from harvesting the trees and moving wood to mills during 2018, a decrease of 5.64% from \$512.74 million in 2017.

Predictions published last year proved to be partially correct. For example, last year AgCenter economists predicted "The lumber restrictions from Canadian suppliers, along with the increased demand for lumber from increased demand in housing should lead to an increased level of removals of our pine timber products. However, there will likely be mostly flat prices for stumpage products in 2018."

Prices were flat, but, alarmingly, demand for pine sawtimber flagged. Interestingly, in recent years in Louisiana, the typical pattern is an upward trajectory, but the trend moves in a zigzag pattern. Up one year, but down the next, only not as far down as two years prior. If this pattern continues, we should break the 1 billion board feet threshold next year.

We still have the problem of building inventories. Across the south growth is between 6% to 7%, while harvest is 5% and then there are about 10 years of backlog. Minus the spot market activity that is common in individual timber markets, which are a function of miscalculating weather, and mill inventories, most economists do not expect dramatic increases. As the Louisiana Summary said last year, if timber owners or managers are deciding to

Plant Enterprises

postpone harvest to get better prices, AgCenter economists advise not waiting. Prices will improve but generally will not cover the opportunity cost of the investment (cutting and replanting or investing elsewhere).

Nonetheless, demand will continue to ramp up for final goods in lumber, plywood and oriented strand board (OSB) products. However, OSB has a supply problem right now — too much for the housing starts in 2018, but this should iron out in the next two to five years. Landowners and loggers are not likely to see these gains (in prices) because of increased market power of the mills remaining in the state and continued slack in production capacity.

Fruit Crops

Louisiana's commercial fruit production is diverse, ranging from low-growing berries to tree fruits. Producers grow both temperate and semitropical crops, thanks to our unique climate. Many commercial orchards operate on a U-pick basis. Some operations sell both trees and harvested fruit, and others direct market their crops through farmers markets, grocery stores and community-supported agriculture groups. Many growers plant a variety of fruit trees and shrubs to ensure multiple harvest times throughout the year and, therefore, continued cash flow. In 2018, commercial fruit crops were harvested on roughly 2,413 acres. Gross farm value for commercial fruit production was \$32.7 million in 2018, down slightly from \$41.2 million in 2017.

Citrus is the number one crop in terms of acreage planted with 884 acres in production at a gross farm value of \$9.6 million. Blueberries are the No. 2 fruit crop grown in terms of acreage with 406 acres and a gross farm value of \$7.4 million. Peaches are the third largest crop in terms of acres produced (295 acres) with a gross farm value of \$1.4 million. Other significant crops produced in Louisiana include mayhaws, which are grown on 270 acres and have a gross farm value of \$1.4 million; muscadine grapes, which are grown on 228 acres with a gross farm value of \$1.8 million; strawberries, which are produced on 218 acres with a gross farm value of \$8.7 million; blackberries, which are produced on 106 acres with a gross farm value of \$2.3 million; and, finally, figs, which are produced on 80 acres for a GFV of \$825,650. These acres and values reflect commercial production. Louisiana backyard gardeners also grow many fruit crops. The top three backyard fruit crops are citrus, figs and blueberries.

A variety of impediments contribute to a decline in fruit production. In no particular order, Louisiana fruit producers face huge disease and insect pressure, especially in the citrus and peach industry. Citrus canker, citrus greening and Armillaria root rot in peaches have devastated these industries. Many growers are beginning to consider retirement, and family members are often not willing to take over the day-to-day farm operations. Some growers have even stated that their land is more valuable as residential and commercial property rather than remaining in agriculture production. Louisiana producers face competition from neighboring states and overseas fruit production, especially with consumers demanding year-round availability of fruit crops. While this group of farmers face many challenges, they are always striving to produce high quality fruit that tastes great is produced with best management practices and is served fresh to Louisiana residents.

Blackberries

Total acres harvested in 2018 were down nearly 5 acres from the previous year to roughly 107 acres. Despite the lower acreage, slightly higher yields (4,884.5 pints per acre in 2018 versus 4,857.9 pints per acre in 2017) helped to limit the reduction in total production to roughly 2.8% from the previous year. With higher prices experienced in 2018, total gross farm value remained essentially unchanged from the previous year at \$2.4 million.

Blueberries

Gross farm value of blueberries decreased marginally during 2018 to \$7.4 million, down from \$7.5 million during 2017. While harvested acreage was down (406 in 2018 versus 454 in 2017), an increase in average yields (3,953 pounds in 2018 versus 3,724 pounds in 2017) helped to limit the decrease in total production in 2018 to 1.60 million pounds in 2018 versus 1.69 million pounds in 2017. Slightly higher prices during 2018 helped to mostly offset the lower production limit reductions in gross farm value to 1% in 2018.

Citrus

The Louisiana citrus industry in 2018 involved growers in 25 parishes harvesting a total of 884 acres. The citrus industry primarily consists of navels and satsumas, with satsumas representing 63% of all citrus acres. In 2018, the

Plant Enterprises

breakdown of acreage was 293 in navel production, 554 in satsuma production, and 37 in other types of citrus (lemons, grapefruits and kumquats, among others). Total citrus acres in 2018 were down from 964 acres in 2017. Struggles with diseases and pests, such citrus canker, citrus greening and the Asian citrus psyllid, over the last several years has been one of the main reasons for the downsizing of the citrus industry.

Total navel production was 72,300 bushels in 2018 with a total farm gate value of \$3.16 million. Satsuma production totaled 183,408 bushels in 2018, generating a total farm gate value of \$6.20 million. Other citrus production was estimated at 7,836 bushels in 2018 with a total farm gate value of \$240,952. When combined, the total gross farm value of the citrus industry in 2018 is estimated at \$9.61 million, down from \$11.66 million in 2017.

Mayhaws

The gross farm value for mayhaws was \$1.36 million in 2018 as compared to \$2.25 million in 2017. Orchard and native mayhaw trees produced approximately 120,246 and 468,506 pounds, respectively, for a total production in 2018 of 588,752 pounds, down from 972,579 pounds in 2017. Production, centered in Grant Parish, occurred on 271 acres statewide in 2018 and averaged 2,175 pounds per acre.

Muscadines

Reports concerning muscadine production were divided into fresh fruit production and commercial production. The total gross farm value of all muscadine production in 2018 was \$895,205. Muscadines were grown for fresh fruit on 74 acres by 47 growers who produced 99,964 gallons of grapes in Louisiana during 2018. The fruit usually was sold at \$4 to \$10 per gallon, with an average of \$8 per gallon. The lower prices generally were used at U-pick operations.

Production for juice and wine was considered commercial muscadine production. Muscadines grown for wine production are concentrated in East Feliciana Parish, and Louisiana produced 531 tons of commercial muscadines on 40 acres in 2018.

Peaches

Gross farm value of peaches during 2018 was \$1.42 million, down from \$1.89 million in 2017. Peaches were grown on 295 acres by 53 commercial producers and yielded 29,652 bushels during 2018.

Strawberries

In 2018, the Louisiana strawberry industry involved 47 commercial growers who produced berries on 218 acres for a gross farm value of \$8.74 million. While average prices were up slightly in 2018, lower acreage, lower yields and lower production all helped to generate a gross farm value that was nearly \$5 million lower in 2018. Tangipahoa Parish continues to be the leading strawberry producing parish, with 73% of the total acres in the state and accounting for 78% of the state's total gross farm value.

The majority of the Louisiana strawberries were sold commercially. Growers delivered berries to grocery store warehouses, individual grocery stores and fruit stands. The remaining portion of the crop was sold at farmers markets and roadside stands. Louisiana strawberries are generally available as early as November, December and January. These early berries often bring premium prices and play a large part in the high returns for the crop in Louisiana.

Miscellaneous Fruit

A variety of other fruits are planted in Louisiana as small commercial plantings or as backyard plantings. These crops include figs and pears, among others. In 2018, the combined acreage of figs and pears was 121 with a gross farm value of more than \$905,000.

Plant Enterprises

Commercial Greenhouse Vegetables

During 2018, 19 parishes had farms commercially growing greenhouse vegetables in 146,671 square feet of greenhouse space, up marginally from 146,020 square feet in 2017. Greenhouse production primarily consists of tomatoes followed by lettuce. All of the greenhouse produce was sold on the fresh market, much of it direct retail at local markets.

The estimated gross farm value of Louisiana greenhouse vegetables was \$1.99 million in 2018, down from \$2.32 million in 2017. Total value of greenhouse produce, including value added, was \$2.68 million for 2018, a decrease of roughly \$455,000 from 2017 levels.

Hay Sold

Hay production for commercial sales is a limited part of the total hay production in Louisiana. Nevertheless, hay produced from 185 acres of alfalfa and 364,552 acres of grasslands was sold by 3,392 producers in 2018. Yields averaged 2.6 tons per acre from the grasslands harvested for sale and 5.6 tons per acre from the alfalfa harvested for sale. Production included 940,269 tons of grass hay and 1,033 tons of alfalfa hay. Compared to numbers reported in 2017, the acreage of grasslands used for commercial hay production decreased by 13%.

Weather conditions were not conducive for optimum hay production during 2018. The spring and summer months were very wet and negatively impacted hay production. Conditions were not conducive for optimum hay production until late September. The fall months were dry, and a considerable amount of the 2018 hay crop was harvested during this period. Gross farm value of all hay sales, including some minor alfalfa production, was \$109.1 million, which was \$9.3 million lower than the 2017 hay crop value of \$118.4 million. This decrease in gross farm value for hay production was likely due to the decrease in acreage harvested in 2018.

Home Vegetable Gardens

The number of home gardens in any given year fluctuates greatly with people's interest and the economy. When economic conditions are weak, the number of households using home gardens tends to increase. Vegetable gardening is not only a hobby but also extends the family budget by freeing up limited funds for other food purchases. Research conducted by the U.S. Department of Agriculture indicated approximately one in three households have some kind of garden, including backyard fruit trees, vegetable plots, berry patches, etc.

With this assumption of a garden for one in every three households, a methodology based on parish population data was developed to estimate the number of gardens in each parish of the state. Based on these calculations, the number of home gardens in Louisiana is estimated at 627,300 for 2018. The average value of the home garden was estimated at \$522 for 2018. The basis of this value was a 2008 survey conducted by the vegetable industry that indicated that the average garden produced commodities valued at roughly \$525 per garden. This value is updated each year based on the year-to-year price change experienced in a mix of vegetable and fruits that are typically produced in Louisiana. Given these assumptions, the 2018 gross farm value of home vegetable gardens is estimated to be \$327.45 million.

Nursery Crops

The commercial nursery industry in Louisiana consists of fruit and nut tree nursery stock production, foliage plants, woody ornamentals (trees and shrubs) and floriculture/bedding plants. Commercial nursery crop production in Louisiana had a gross farm value of \$110.3 million in 2018, compared to \$107.1 million in 2017. Wholesale nursery sales in Louisiana have improved over the past several years. Increases in demand were experienced in 2017 as consumers began to replant in response to plant loss caused by two major floods and an extremely rainy growing season in 2016. A continuation of that demand, along with improvements experienced in the overall economy have led to strong demand again in 2018.

Wholesale production was \$6.33 million for the growers of fruit and nut tree nursery stock in 2018. This category consists of citrus, blueberries and figs, among others. Bedding plant and floriculture crop production was \$41.77 million in farm gate sales in 2018. The largest segment of the nursery industry continues to be woody

Plant Enterprises

ornamentals, primarily trees and shrubs. At the wholesale level, woody ornamental growers sold products worth \$59.20 million during 2018. Wholesale production of foliage plants increased somewhat from 2017 and accounted for \$3.05 million in sales in 2018. Including value-added activity of \$60.69 million, the total value of the Louisiana nursery industry at the wholesale level was \$171.02 million in 2018.

Peanuts

In 2018, 1,863 acres of peanuts were harvested, compared to 1,853 acres in 2017. Yields averaged 4,802 pounds per acre, slightly lower than the average yield in 2017 of 4,961 pounds per acre. These yields are reflective of a good growing season during both years. Soil-borne disease pressure was high and increased input cost associated with fungicide applications. Gross farm value in 2018 was estimated at \$2.07 million, up slightly from 1.93 million in 2017. Higher commodity prices in 2018 was the primary reason for the higher overall gross farm value.

Pecans

The 2018 pecan crop was estimated at 7.72 million pounds, up from the 5.29 million pounds estimated in 2017. The 2018 crop is estimated to consist of 4.05 million pounds of improved pecans and 3.67 million pounds of native pecans. Native trees accounted for the majority (79%) of the production in the Louisiana from 2006 to 2015. However, native production was not as dominant this year, accounting for only about 53% of total production in 2018. Wholesale prices in 2018 in Louisiana were generally stable to slightly lower than the previous year as helped to moderately pressure prices.

Commercial pecan production contributes substantially to the agricultural economy of Louisiana. The total gross farm value was estimated at \$9.64 million in 2018. When value-added activities are considered, the total economic impact was estimated at \$12.3 million. The majority of the improved orchards are located in the central and northern parts of the state with native trees dominating production in southern Louisiana. Only Texas, Oklahoma and Louisiana have large areas of natives, while smaller areas are reported for five other states. Generally, over one-half of the improved variety acreage in Louisiana is managed to control diseases, insect pests and weeds.

Rice

Louisiana planted more than 436,000 acres in 2018. Planting was spread out more evenly than normal from the period beginning in late February through March, mainly because of wet soil conditions caused by frequent, but not excessive, rainfall. The Rice Variety by Parish Survey conducted annually by extension agents indicated that Louisiana planted approximately 89% long grain, 10% medium grain and 1% special purpose rice varieties. The top planted rice varieties and hybrids included CL153 (19.5%), CL111 (14%), Cheniere (11.9%), Mermentau (10.5%), CLXL745 (9.7%), Jupiter (5.8%) and XP753 (4.9%). Clearfield seed technology in both inbred and hybrid rice varieties made up approximately 59% of the acres. The new Provisia herbicide technology was available for the first time in 2018 in a variety named PVL01, and it was planted on approximately 10,000 acres, or 2.3%, of the total acreage.

The first real challenge of 2018 was cool weather. Most of March and the first couple weeks of April were cooler than normal. In fact, the region even had a daily low temperature in early April that reached into the mid-30s. Cold damage, delayed growth and development, and short and stunted plants were common early on.

Rice stressed by cold weather also tended to be more susceptible to herbicide damage with many of our commonly used early season rice herbicides. The rice herbicide Loyant was available to growers for the first time in 2018. Loyant is a unique herbicide in that it is an auxin and it has activity on broadleaves, sedges and even some grasses. It was used on many acres during its first year of availability, and we learned a lot about the herbicide. First, it is only effective on small grasses and is not effective in controlling the larger grass problems. However, it is very effective in controlling soybeans, and several drift issues with the herbicide were recorded. Rice can also be damaged by the herbicide when used on recently land-leveled fields or when other rice stresses (like cold stress) are present. Hybrid rice also seemed to be more susceptible to the damage than conventional rice.

Plant Enterprises

The weather turned hot almost overnight in late April. Hot, dry weather was prevalent throughout the remainder of the season until very late. Pre-flood nitrogen fertilizer applications were easily made in 2018, making the fertilizer efficiency higher than in most years. The drought-like conditions made the rice move quickly and favorable for high yields because of the lower disease potential. The only real problem were growers who could not keep up with the flood because of lower irrigation capacities.

The winter preceding the 2018 planting season was colder than normal, and the sentiment going into the season was that the insect and disease pressure would be lessened to some degree. Disease potential was low because of the drought conditions and few blast issues were reported. Sheath blight did move in late with some of our more susceptible varieties. Insect pressure from stink bugs and the rice water weevil were not excessive in 2018.

The rice new Provisia variety PVL01 did better than expected in 2018. Researchers knew going into the season that the variety was lower yielding than all of other commonly grown varieties and hybrids. They also knew that the technology would enable farmers to clean up Newpath-resistant red rice and weedy rice while still making decent yields and even higher yields in fields that previously had excessive outcross populations. We also learned that the cold weather stress increased the herbicide damage from the Provisia herbicide. However, the control of red rice was excellent. Due to blast susceptibility, two fungicide applications were applied on the variety. While blast was controlled, sheath blight did become a problem in some fields that received two fungicide applications. Part of the problem is the very leafy canopy of the variety, which shielded the fungicide from reaching into the canopy. Nonetheless, the variety probably averaged in the low 40-barrel range in south Louisiana, which I would label a huge success.

In 2018, the statewide rice average yield was 7,211 pounds per acre (42.2 barrels or 152 bushels per acre), up from 6,840 in 2017. A total of 31.45 million hundredweight of rice was produced on 436,130 harvested acres in 2018. The gross farm value in 2018 for rice produced was \$379.6 million in 2018, up from \$297.6 million in 2017. When value-added activities of \$126.4 million are considered, the total economic impact of the rice industry was \$506 million in 2018, up from \$327.7 million in 2017.

Sod and Turfgrass Production

During 2018, sod was produced by 18 Louisiana sod farmers on 3,886 acres of fine turfgrasses, compared with 19 sod producers farming 3,996 acres in 2017, a reduction of 100 acres. About 60 of the sod acreage in Louisiana is centipedegrass, and about one-third is St. Augustinegrass. The remaining acreage is divided among hybrid bermudagrass and zoysia. Zoysia demand has steadily increased over the last several years. Shipping costs are always a major component in the eventual price of sod. Fuel costs remained relatively steady to slightly lower in 2018 compared to 2017. Overall profit margins continued to be strong for the industry for the year. Out-of-state sod farms are always major competitors for Louisiana producers, especially in the southern Louisiana market.

The gross farm value of sod and turfgrass sales in 2018 was estimated to be \$30.4 million, down slightly from the \$31.2 million in 2017. Value added for turfgrass production was \$22.8 million, so the total value of sod and turfgrass production in Louisiana during 2018 was \$53.2 million.

Soybeans

In 2018, 1.3 million acres of soybean were planted by 2,254 producers. However, only 1.1 million acres were harvested because of inclement weather. While planted acreage and numbers of producers were similar to that in 2017, harvested acres were 121,369 lower in 2018. Despite inclement weather at harvest, the statewide average yield was 55.7 bushels per acre, compared to 53.5 in 2017. Gross farm value for 2018 was \$606.1 million, down \$73.2 million from 2017.

The 2018 season got off to a good start, but dry conditions slowed planting. Insect and disease pressure were low during the year, but persistent late-season rains prevent producers from harvesting 147,777 acres. Seed quality and yields were negatively impacted in fields that were harvested after being subjected to extended periods of inclement weather.

Plant Enterprises

Sugarcane

In 2018, sugarcane was grown on 459,217 acres in 25 Louisiana parishes. Harvested acres were 429,368 after accounting for seed-cane acreage. The 11 operating raw sugar factories in the state processed nearly 16,867,669 tons of cane. In total, the 11 factories produced 1.84 million short tons of sugar (96 pol). The average field yield of cane on harvested acres was 39.3 tons per acre. The average sugar recovery was the second best on record at 218 pounds of sugar (96 pol) per ton of cane. The yield of commercially recoverable sugar produced per acre averaged 8,577 pounds. Although the pricing period is not complete for the 2018 crop, the projected average price for raw sugar was estimated at 26 cents per pound. The molasses price was projected to average \$97 per short ton at 79.5 °Brix.

The gross farm value of the 2018 sugarcane crop was \$600.1 million for sugar and molasses. The gross farm value reported above represents 60% of the value of the sugar and 50% of the value of molasses produced. The remaining percentages are for raw sugar processing, which amounted to \$408.6 million. Therefore, the total value of the sugarcane crop to Louisiana producers, processors and landlords at the first processing level was \$1.009 billion.

Cane yield for the 2018 crop was high. The higher tonnage was likely the result of less field damage from a dry 2017 harvest and late growth during late August through mid-October. The growing season had high rainfall (65.39 inches at the Baton Rouge Metropolitan Airport), but that amount was evenly distributed during the growing season. The yield of sugar per acre was high because of the record tons of cane per acre. The first mills began processing cane on September 25, 2018. Recoverable sugar per ton of cane was relatively low because of wet harvesting conditions increasing mud and trash at the mill. A moderate freeze occurred in mid-November, which lowered sugar recoveries for the growers and mills in the northern part of the Louisiana sugar industry. The last mill finished processing sugarcane on January 19, 2019.

The 2018 sugarcane variety census showed that the most widely grown variety for Louisiana producers was L 01-299, which was grown on 51% of the state's acreage. HoCP 96-540 occupied 20% of the acreage. This was followed by L 01-283 (14%) and HoCP 04-838 (4%). A new sugarcane variety, L 11-183, was released to sugarcane growers for commercial production.

Sweet Potatoes

Louisiana sweet potato acreage decreased slightly in 2018. Producers harvested 7,682 acres in 2018, compared to 9,194 acres in 2017. Prior to 2018, Louisiana acreage had remained steady, in the 9,000-acre range. Louisiana remains fourth in sweet potato production acreage in the United States behind North Carolina, Mississippi and California.

Weather conditions in the spring season were a mix. Some producers experienced wet conditions, which resulted in planting delays. Dry conditions in certain regions of the state caused planting delays, and stand establishment was an issue in some areas, while others realized an ideal planting season in 2018. During the summer months producers experienced some dry conditions, which persisted until the harvest season. During the harvest season all producers dealt with excessively wet conditions, which delayed harvest and some acreage went unharvested. It is estimated that 15% of the crop went unharvested because of wet conditions and breakdown of roots in the fields.

The accidental introduction of the guava root knot nematode in a seed shipment was a major concern for the sweet potato industry during 2018. Growers also dealt with weed issues, such as nutsedge and pigweed, and insect pressure from cucumber beetles throughout the season.

Despite the challenges discussed above, Louisiana producers harvested an above-average crop on harvested acreage. Estimated yield was 491 bushels per acre, up approximately 68 bushels compared to 2017. Research advances on production practices, fertility, and new and improved varieties are some of the reasons yield is trending upward.

A large percentage of the Louisiana sweet potato crop is marketed to the processing sector for sweet potato fries and other products. Some producers are marketing their entire production acreage under field run contracts,

Plant Enterprises

while others are maintaining markets in fresh and processing venues. Production and packing cost for sweet potatoes in Louisiana are estimated to be in the \$4,000 to \$4,600 range per acre. Cost of production for potatoes grown for the processing sector utilizing a bulk harvester is estimated at \$2,300 per acre before storage costs are incurred.

Prices estimates for the 2018 season were \$17 for a 40-pound box of U.S. No. 1's, \$9 for U.S. No. 2 and \$9 for jumbos. Frozen processor price received to the grower ranged from \$16 to 24 per hundredweight. Virtually no canner grade markets were available to Louisiana producers. If this market was available price would be \$6 per hundredweight.

Louisiana currently produces three major varieties of sweet potato. They are Beauregard, Orleans and Bayou Belle. Orleans performed consistently better than Beauregard in commercial fields and research trials in most locations. Orleans is expected to continue to displace Beauregard acreage over the next few years. This variety is suitable for both fresh and frozen processor venues.

Sweet potatoes are marketed year-round. Producers, shippers and brokers are interested in maintaining a year-round supply to meet the consumer needs. In addition to the fresh market demand, there has been an increase in demand for consumer-friendly sweet potato products, such as sweet potato fries, canned sweet potatoes, sweet potato chips, cookies, pet food and juice extracts. Growth in value-added use and markets for producers is expected to increase the demand for sweet potatoes. The growth is expected to result in acreage increases in the sweet potato productions areas of the southeastern United States.

Louisiana's total gross farm gate value for sweet potatoes in 2018 is estimated at 53.99 million, compared to \$52.90 in 2017. Total value of sweet potato production, including value added of \$40.49 million, was \$94.48 million.

Vegetables, Commercial

Louisiana vegetable producers grow a wide variety of vegetable crops generally on smaller acreage farms. Although the majority of farms produce crops on 1 to 5 acres, there are a few farms producing vegetables on more than 60 acres. Most vegetable producers grow anywhere from 1 to 30 different types of vegetables. This diversity in crops is because the majority of Louisiana vegetables are sold directly to the consumer. Consumers prefer having options when purchasing from farmers markets and community supported agriculture groups. A few producers sell corn and melons on the wholesale market. In an effort to assist producers in increasing production efficiency and profitability, the LSU AgCenter partners with the Louisiana Fruit and Vegetable Growers Association (LFVGA) in hosting an annual producer field day. Additionally, the LSU AgCenter provides copies of the Southeastern U.S. Vegetable Crop handbook to our commercial producers at the annual field day. The LSU AgCenter also conducts several annual variety trials helping producers make smart choices in vegetable selection.

In 2018, 36 vegetables crops were produced. The top three producing parishes were Tangipahoa Parish, with an estimated \$7.9 million gross farm value; Washington Parish, with an estimated gross farm value of \$4.9 million; and Bienville Parish, with an estimated gross farm value of \$3.5 million. In terms of gross farm value, the top three vegetable crops in Louisiana for 2016 were tomatoes (\$11.2 million), watermelon (\$10.2 million) and southern peas (\$4.1 million). Other vegetable crops that had significant farm gate values in 2018 were bell peppers (\$2.5 million), mustard (\$3.2 million) and okra (\$2.4 million). The gross farm value of all commercial vegetable sales in the state was \$52.4 million in 2018.

Wheat

Wheat acreage continued to decline in 2018. This was due in part to a wet planting season that prevented producers from planting. Thirty-nine producers planted 8,951 acres and harvested 8,338 acres. In 2017, 58 producers planted 15,640 acres and harvested an estimated 13,931 acres. However, despite declining acreage, the average yield was estimated to be 62 bushels per acre, compared to 43 in 2017. This was reflective of an overall good growing season. Scab (*Fusarium head blight*) was present, but not as severe in previous years. The gross farm value was \$2.57 million, down slightly from 2017.

2018 Progress Report

Animal Commodities

Commodity	Gross Farm Value	Value Added	Total Value
Cattle and Calves	\$413,722,361	\$51,715,295	\$465,437,656
Milk	\$29,683,479	\$47,790,401	\$77,473,880
Horses	\$338,000,200	\$37,180,022	\$375,180,222
Poultry	\$1,036,751,274	\$1,010,832,492	\$2,047,583,766
Rabbits	\$110,634	\$11,617	\$122,251
Quail/Pheasant	\$43,318	\$4,765	\$48,083
Sheep	\$962,613	\$110,701	\$1,073,314
Goats	\$1,951,093	\$243,887	\$2,194,980

Prices of Commodity Products

The gross form value of the commodities reported in the parish tables was computed based upon estimated annual per-unit prices. The state average prices listed below were used for most parishes for most commodities. However, a parish price was used if the parish price was significantly different from the state price.

Plant Enterprises Commodities		
Commodity	Unit	2018 Price
