These bedroom partitions are designed to permit flexible arrangement or removal. The storage partition is made up of individual closet units which are supported on lightweight flat boards which serve to protect the finish floor tile and prevent the joints between units from showing. The floor is covered with carpeting, concealing the joints between units.

All framing is 2x4x8 except as noted.

Closet doors should have magnetic latches at top and bottom.

Perforated hardboard is used on closet doors for ventilation. The wall for this partition is made of plywood and conceals the joints between units.

Construction of heater enclosure will depend on the type of heating unit to be installed.

This site makes available conceptual plans that can be helpful in developing building layouts and selecting equipment for various agricultural applications. These plans do not necessarily represent the most current technology or construction codes. They are not construction plans and do not replace the need for competent design assistance in developing safe, legal and well-functioning agricultural building system. The LSU Agriculture Center, the Mid-West Plan Service, the United States Department of Agriculture and none of the cooperating land-grant universities warranty these plans.
