Treatment for Fungal Disease

Description:

This invention is a new type of treatment for Aspergillosis, a type of fungal infection. This infection is particularly deadly, causing blood clots and impairment of the lungs. Usually infecting those with suppressed immune system, Aspergillus is present in general environment and can be inhaled from anywhere. This new treatment can overcome the organism's normal drug resistance and offers new hope to those suffer from infection.

Advantage:

- Kills more Aspergillus fungi
- Overcomes Aspergillus drug resistance
- Fewer potential side effects

Commercial Uses:

- Treatment of Aspergillosis
- Prevention of dental caries
