The support and cooperation of Louisiana's farmers, ranchers and agribusinesses are the foundation for accurate and reliable agricultural statistics. The entire staff of the National Agricultural Statistics Service's Louisiana Field Office, along with the enumerators of the National Association of State Departments of Agriculture (NASDA) who collect the data, would like to express our great appreciation to the many individuals and operations that provided the survey data to make this publication and the estimates it contains possible.

The 2009 Louisiana Agricultural Statistics bulletin provides a wealth of economic, crop, livestock and weather data for the state as a whole. Additionally, for major commodities, the bulletin provides parish level estimates for the years 2005-2009. The historical section of the bulletin, published every five years, contains state level statistics dating as far back as 1866.

Funding for the publication of 2009 Louisiana Agricultural Statistics was provided by the Louisiana State University Department of Agricultural Economics and Agribusiness.

Message from Commissioner Strain

The Louisiana agriculture and forestry industry, valued at more than \$8.3 billion, remains one of the largest economic drivers of the state. The number is impressive but it is the lowest value of Louisiana's agricultural economy since 2002.

Poultry and forestry, the state's two largest agricultural industries, declined 25 percent in value, and row crop farmers suffered from lingering devastation caused by hurricanes Gustav and Ike and an extremely wet 2009 harvest season. Stress on agriculture will continue, not only from Mother Nature, but also from societal pressure.

Sociologists expect the United States population to grow by more than 100 million in the next 30 years. The population increase will result in less available land for agriculture but a great need for food, fiber and bioenergy. The average age of today's farmer is 57 and new farming families are adding only nine percent to the gross farm economy.

Still, I am confident that our nation's farmers, foresters and ranchers will meet the challenge. More importantly for Louisiana, I believe our producers and agribusinesses are in a unique position to capitalize on these growing needs. About 60 percent of the nation's grain exports pass through south Louisiana ports. The Mississippi River port system is the world's largest in tonnage. Louisiana is blessed with a long growing season, abundant resources and proximity to ports, rail and interstate transportation systems.

Total expenses for farming families are expected to remain static for the next year but farm commodity prices are expected to rise. All wealth is based on agriculture. With a lot of hard work and a little luck, the Louisiana farmer, forester and rancher will persevere and ultimately thrive.

I will continue to advocate for the preservation of a strong agricultural base in Louisiana and our nation. Indeed, the preservation of our farm economy is not only a matter of economic development but also our national security. Ultimately, I believe the American food, fiber and forestry producer will prevail.

Sincerely,

Mike Strain, DVM
Commissioner

In cooperation with:

Louisiana State Department of
Agriculture & Forestry

Louisiana State University
Agriculture Center

The USDA-National Agricultural Statistics Service, Louisiana Field Office publishes the Louisiana Agricultural Statistics bulletin through cooperative agreements between the USDA - National Agricultural Statistics Service's Louisiana Field Office and the Louisiana Department of Agriculture and Forestry. Louisiana State University AgCenter and Extension Service and Southern University Extension have provided tremendous assistance in compiling data within this report. Enclosed in this publication are parish and state level estimates for specified agricultural commodities in this state along with revisions to parish level data from our 2007 Census of Agriculture.

Unlike in 2008 when hurricanes Gustav and Ike ripped through the state devastating crops, the 2009 crop year was virtually weather event-free except for some dry weather early in the growing season. Most crops progressed well during the 2009 growing season aided by some irrigation where dry field conditions made it necessary for crop development. Late season rains hampered harvest of late season crops especially soybeans.

Rice producers were able to get most of their ratoon crop harvested, setting a record high yield, while the sweet potato crop was virtually destroyed again by very wet and often times flooded fields. This is at least the second crop in consecutive years that the sweet potato crop has been almost destroyed by weather conditions. Corn producers had an above average year with yield and prices improving from last year. Sugarcane producers had a somewhat normal year with crop condition slightly above normal up until the wet harvest period and prices were holding steady. Pecan production was considerably less going into their off-year while rebounding from the storms of 2008.

We thank all Louisianans who have participated in the March, June, September, December Agricultural Surveys, Monthly Crop Yield surveys, January and July Cattle Surveys, Cotton Objective Yield Survey, January and July Sheep and Goat Surveys along with a number of other surveys conducted on an annual basis. Producers were under tremendous amount of stress making decisions on whether or not to plant crops or which crops to plant depending on land conditions and crop prices. USDA-NASS, Louisiana Field Office was able to provide valuable information to producers during critical decision-making periods because of your cooperation on the annual and monthly surveys that are conducted by this office.

Data included in this publication represent numerous agricultural, and economic surveys completed by a multitude of Louisiana producers over the years. Without the cooperation of agricultural producers, agri-business and private industry these data series would not be possible. Thank you again for your participation.

The Louisiana Field Office is a state office within the National Agricultural Statistics Service which is the agency charged with providing agricultural statistics for the United States Department of Agriculture.

Nathan L. Crisp

Director

Weather Review: Louisiana, 2009

Louisiana's weather highlights for 2009 featured drought, heavy rainfall and tornadoes. Statewide, annual temperature averaged 66.8° F, slightly below normal. Louisiana experienced a wetter-than-normal year with the annual rainfall totaling 65.09 inches, five inches above normal. Rains created a feast or famine setting for the state, with excesses in rain counter-balanced with extended periods of drought.

January: The year opened with warm weather. On the 3rd, heavy rainfall pounded southeastern parishes and one tornado was reported. The second week was mild, but then the coldest weather of the season arrived on the 16th when temperatures dipped to near 20° in northern parishes and near 30° along the coast. Overall, this turned out to be a dry month.

February: The month began with drought problems beginning to add up across the state. There were some meaningful rains in week two which coincided with some very warm temperatures. However, the month had several other frontal passages that produced little to no rainfall. By month's end, part of the state was in moderate drought according to the U.S. Drought Monitor.

March: March opened up with arid conditions, furthering drought problems. From 12-15 March, a quasi-stationary front hung over Louisiana bringing much needed rainfall and drought-relief. After some delightful spring weather in week three, severe weather ended the week. Numerous tornadoes touched down in Louisiana from 24-27 March, with additional tornadoes on the 31st, capping off a busy weather month.

April: Early April continued the pattern of severe weather with additional tornado and high wind reports. There was a tornado documented on the 2nd and eight tornadoes were reported on the 9th. In Caddo Parish, 10-15 rail cars were blown off their tracks by high winds. The 17th and 18th experienced heavy rainfall, especially in southwestern parishes. The month ended with more isolated severe weather in the form of damaging winds.

May: The month opened with unsettled weather bringing scattered thunderstorms and hail. On the 11th, heavy rainfall impacted northern parishes, and a tornado was documented on the 14th in Calcasieu Parish. The latter half of May brought relatively cool and dry conditions to the state.

June: There were some limited rains early in June which pretty much ended on the 4th. For the remainder of the month rainfall was sparse, and temperatures occasionally became dangerously high. From 25-28 June, several locations within the state had temperatures exceeding 100° F. Drought conditions also took hold in southern parishes.

July: July provided some drought relief, as more typical summer-time conditions returned to the state. The month saw weak frontal passages and scattered afternoon thunderstorms. There were some instances of isolated heavy rainfall, as on the 7th, when several locations in southwestern parishes recorded rainfall amounts of near four inches, and in some cases more. On the 28th in northern parishes several stations exceeded three inches of rainfall. Overall, it was a good month for drought relief.

August: The month opened with typical summer-like conditions with scattered thunderstorms. This quickly gave way to more arid conditions, raising fears of drought. The first of two tropical storm threats occurred mid-month, with Tropical Storm Claudette making landfall near Ft. Walton Beach, Florida. The latter half of the month was a transition into fall-like conditions with frontal passages and cooler and less humid air masses.

September: September began cool and dry, but several stubborn fronts parked over the state during the latter three weeks of month, bringing beneficial rains. By month's end, the drought was on the ropes.

October: The rains came...and then came again. Numerous fronts stalled over the state, and it rained profusely. In several instances, regions around the state experienced very heavy rainfall of four inches or more. By month's end, the state averaged 13.8 inches, marking the wettest October on record for Louisiana, with record keeping dating back to 1895. There were also two tornado outbreaks, whereby 11 were reported on the 22nd and 12 on the 29th.

November: After a very wet October, November was a month of drying out. On the 9th, Tropical Storm Ida did provide some excitement to the state, but the storm eventually made landfall near Mobile, Alabama. This storm's maximum storm surge, however, was recorded at 5.5 feet at Shell Beach, Louisiana in St. Bernard Parish. Overall, November was a dry month.

December: The month began with a major snow event on the 4th. Two to three inches were documented just north of the I-10/I-12 corridor. By the 12th, heavy rains began pounding southeastern parishes, and the rains were relentless throughout the rest of the month. By month's end, the New Orleans International Airport recorded over 25 inches of rainfall, setting an all-time monthly rainfall accumulation record. There were tornadoes reported on the 14th in Jefferson Parish, and 16 tornadoes were reported on the 23rd and 24th. The state ended up averaging over 10 inches of rain, making December 2009 the 5th wettest December on record.

Louisiana Crop Weather, 2009

Soil moisture supply measures how much moisture is present in cropland top soil during the week. Soil moisture is reported as a percentage. The categories very short, short, adequate and surplus must add up to 100%.

Very Short - Soil moisture supplies are significantly less than required for normal plant development. Growth would be stopped, or nearly so, and plants would be showing visible signs of moisture stress. Under these conditions, plants would quickly suffer irreparable damage.

Short - Soil dry. Seed germination and/or normal crop growth and development would be curtailed.

Adequate - Soil moist. Seed germination and/or crop growth and development would be normal or unhindered.

Surplus - Soil wet. Fields might be muddy and would generally be unable to absorb additional moisture. Young developing crops might be yellowing from excess moisture.

Days suitable for fieldwork measures how many days during the week were “ones where weather and field conditions allowed producers to work in fields for the majority of the day”.

Soil Moisture Supply

Days Suitable for Fieldwork

Soil Moisture Supply and Number of Days Suitable for Fieldwork: Louisiana, 2009¹

Week	Very Short	Short	Adequate	Surplus	Number of Days Suitable for Fieldwork

Peaches

Commercial peach production was valued at 1.0 million dollars in 2008, compared to 1.1 million dollars in 2007. Yield per acre averaged 1.9 tons, down .52 ton from the 2007 peach crop. The number of acres of bearing age trees continued its decline, dropping from 250 acres to 240 acres, a four percent decrease from 2007. This represents a drop of 47 percent over the past 10 years.

Peaches - Production, Price and Value of Production: Louisiana, 2006-2008

Year	Acres of Bearing Age	Yield per Acre	Total Production	Utilized Production	Season Average Price	Value of Utilized Production
			-----Tons-----		Dollars per Ton	1,000 Dollars
2006	260	2.12	550	550	1,730	952
2007	250	2.40	600	600	1,900	1,140
2008	240	1.88	450	450	2,310	1,040
2009	1/					

¹ Program discontinued following the 2008 crop.

Pecans

Louisiana's total pecan production was valued at 8.1 million dollars in 2009. Of this total, native and seedling varieties represented 60 percent, while improved varieties represented 40 percent. Production of all pecans totaled nine million pounds, compared to five million pounds the previous year. Of the total, native and seedling varieties represented 72 percent of the poundage, while improved varieties represented 28 percent.

Pecan Production: Louisiana, 1960-2009

Louisiana Timber Production and Resources

Overview*

Louisiana's forest lands cover 14 million acres -- about 50 percent of the state's land area -- the state's single greatest land use. Fifty-nine of the state's 64 parishes contain land capable of producing sufficient timber to support forest-industry activities as well as provide wildlife habitat, recreational opportunity, scenic beauty and other environmental benefits. There are 148,000 owners of Louisiana forest land. Private, non-industrial landowners own 81 percent of the state's forest land; forest-products industries own ten percent and the public owns nine percent. In 2009, forestry accounted for 53 percent of the gross farm value of all plant commodities grown in Louisiana. Forestry contributes 35 percent of the gross farm value of Louisiana's combined plant and animal agricultural commodities.

* Prepared annually by the Louisiana Department of Agriculture and Forestry from multiple sources.

Cattle and Calves

Inventory, Supply and Disposition: Louisiana, 2006-2010¹

Year	Inventory January 1	Calf Crop	Inshipments	Marketings ²		Farm Slaughter ³	Deaths	
				Cattle	Calves		Cattle	Calves
-----1,000 Head-----								
2006	820	415	2	129	212	2	16	18
2007	860	425	2	132	224	2	19	20
2008	890	420	2	142	241	2	18	19
2009	890	400	2	153	260	2	21	16
2010	840	4/	4/	4/	4/	4/	4/	4/

¹ Sum of inventory January 1 of previous year, calf crop, and inshipments is equal to the sum of marketings, farm slaughter, deaths, and inventory January 1 current year.

² Includes custom slaughter for use on farms where produced and state outshipments; excludes interfarm sales within the state.

³ Excludes custom slaughter for farmers at commercial establishments.

⁴ Data will be available in February, 2011.

Production and Income: Louisiana, 2006-2009

Year	Production ¹	Marketings ²	Average Price per 100 Pounds		Value of Production	Cash Receipts ³	Value of Home Consumption	Gross Income
			Cattle	Calves				
-----1,000 Pounds-----			-----Dollars-----		-----1,000 Dollars-----			
2006	239,562	214,360	63.40	120.00	214,148	195,900	1,119	197,019
2007	244,877	221,560	63.50	111.00	208,881	193,891	1,073	194,964
2008	231,335	234,100	62.60	99.50	189,776	191,011	989	192,000
2009	222,360	252,400	55.50	93.20	170,208	189,092	888	189,980

¹ Adjustments made for changes in inventory and for inshipments.

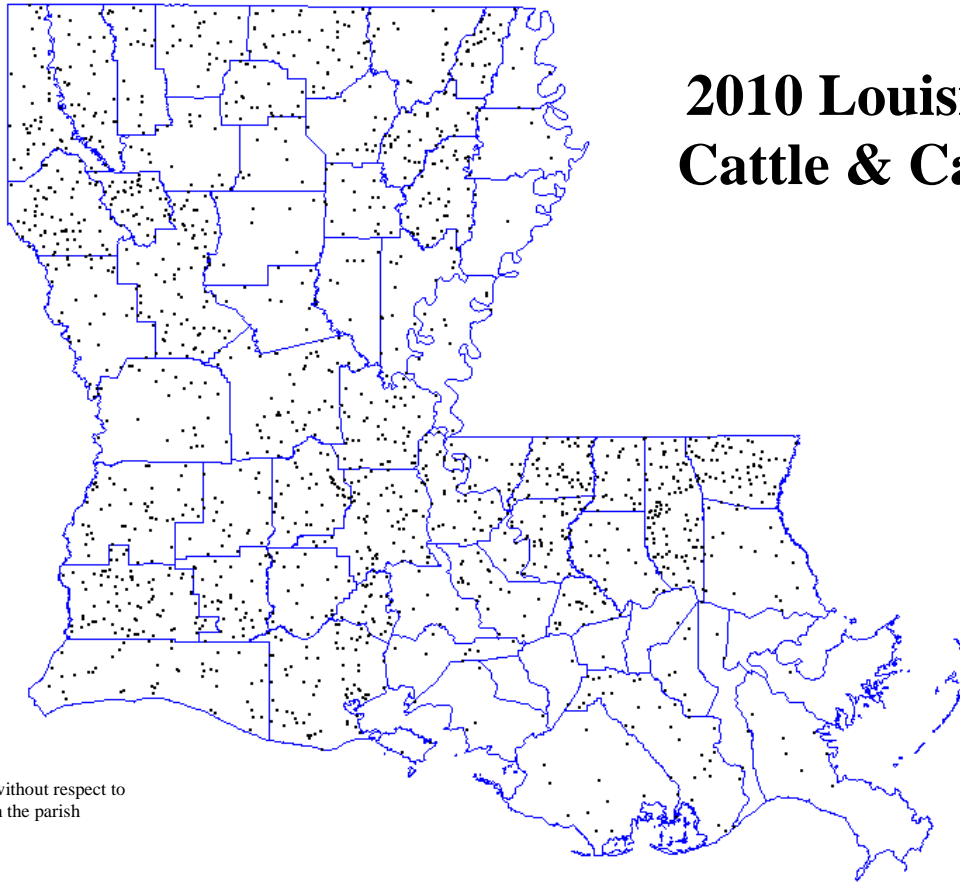

² Excludes custom slaughter for use on farms where produced and interfarm sales within the state.

³ Receipts from marketings and sales of farm slaughter.

Total Cattle and Calves: Louisiana, 1961-2010

¹ Cash Receipts from marketings of milk and cream plus value of milk used for home consumption.

Hogs and Pigs

Pig Crop - Sows Farrowed, Pigs Per Litter and Pigs Saved:

Louisiana, 2006-2009

Year	Sows Farrowed	Pigs per Litter	Pigs Saved
	-----1,000 Head-----	-----Number-----	----1,000 Head----
2006	3.7	7.0	26
2007	3.0	7.0	21
2008	3.2	6.8	22
2009	1.7	8.3	14

Inventory, Supply and Disposition: Louisiana, 2006-2009¹

Year	Inventory Previous Dec. 1	Pig Crop	Inshipments	Marketings ²	Farm Slaughter ³	Deaths
	-----1,000 Head-----					
2006	14	26.0	2	26.5	1.0	0.5
2007	14	20.9	2	24.5	1.0	0.4
2008	11	22.4	2	22.7	1.0	0.7
2009	11	14.1	2	15.1	1.0	1.0

¹ Sum of inventory December 1, previous year, pig crop, and inshipments is equal to the sum of marketings, farm slaughter, deaths, and inventory December 1, current year.

² Includes custom slaughter for use on farms where produced and state outshipments; excludes interfarm sales within the state.

³ Excludes custom slaughter for farmers at commercial establishments.

Production and Income: Louisiana, 2006-2009

Year	Production ¹	Marketings ²	Average Price per 100 lbs	Value of Production ³	Cash Receipts ^{3,4}	Value of Home Consumption	Gross Income
	-----1,000 Pounds-----		--Dollars--	-----1,000 Dollars-----			
2006	5,142	5,035	38.40	1,969	1,933	72	2,005
2007	4,281	4,655	39.10	1,671	1,820	74	1,894
2008	4,713	4,427	38.60	1,817	1,709	75	1,784
2009	2,757	2,869	35.70	976	1,024	67	1,091

¹ Adjustments made for changes in inventory and for inshipments.

² Excludes custom slaughter for use on farms where produced and interfarm sales within the state.

³ Includes allowance for higher average price of state inshipment and outshipment of feeder pigs.

⁴ Receipts from marketings and sales of farm slaughter.

Chickens

Number on Farms, Rate of Lay and Egg Production: Louisiana, 2006-2009¹

Year	Chickens on Farms, December 1		Average Number of Layers During Year	Annual Rate of Lay per Hen ²	Total Egg Production
	All Chickens	Value			
	--1,000 Head--	--1,000 Dollars--	-----1,000 Head-----	----Number----	-----Million-----

2008	2,365	8,041	1,848	259	479
2009	2,630	9,205	1,737	262	455

¹ Estimates cover the 12 month period December 1, previous year, through November 30 of year referenced.

² Total egg production divided by average number of layers on hand.

Layers

Production and Income: Louisiana, 2006-2009¹

Year	Pounds Sold	Price per Pound	Value of Production
	-----1,000 Pounds-----	-----Dollars-----	-----1,000 Dollars-----
2006	11,458	0.076	871
2007	10,496	0.070	735
2008	12,366	0.078	965
2009	9,986	0.080	799

¹ Estimates cover the 12 month period December 1, previous year, through November 30 of year referenced.

Eggs

Production Price and Value: Louisiana, 2006-2009¹

Year	Eggs Produced	Price per Dozen ²	Value of Production
	-----Million-----	-----Dollars-----	-----1,000 Dollars-----
2006	504	.86	36,136
2007	490	1.04	42,333
2008	479	1.19	47,694
2009	455	1.00	38,009

¹ Estimates cover the 12 month period December 1, previous year, through November 30 of year referenced.

² Average of all eggs sold by producers, including hatching eggs.

Bees and Honey

Honey production from Louisiana producers with five or more colonies during 2009 totaled 3.8 million pounds, 24 percent above the 2008 level. Producers harvested honey from 37,000 colonies. Production per colony averaged 103 pounds.

Prices from the 2009 honey crop averaged \$1.32 per pound, down \$0.04 from 2008. Prices were based on retail sales by producers and sales to private processors and co-ops. Louisiana producers had 610,000 pounds of honey in stock on December 15, 2009, compared with 493,000 pounds on hand the previous year.

Number of Colonies, Production, Stocks and Value: Louisiana, 2006-2009

Year	Number of Colonies	Average Yield per Colony	Production	Stocks Dec 15 th	Average Price per Pound	Value of Production
	---1,000---	---Pounds---	-----1,000 Pounds-----		---Cents---	---\$1,000---
2006	30	90	2,700	675	90.0	2,430
2007	29	89	2,581	413	108.0	2,787
2008	40	77	3,080	493	136.0	4,186
2009	37	103	3,811	610	132.0	5,031

Catfish

Louisiana ranks fifth in the nation in foodsize catfish production, water surface acres and total sales of catfish. Mississippi leads the nation in foodsize catfish production, followed by Alabama, Arkansas and Texas.

Total sales of catfish in Louisiana for the year 2009 were \$8.4 million, down 29 percent from sales in 2008. Farmers sold 11.5 million pounds of foodsize catfish in 2009 compared to 15.4 million pounds in 2008. Sales in 2009 averaged 73 cents per pound, down four cents from 2008.

Catfish data come from the annual January 1, 2010, Catfish Grower's Survey.

HISTORICAL SECTION

Demand for data – particularly time series data – continues to increase. The most recent bulletin edition recapping historical Louisiana agricultural statistics was published in 2005, covering the period 1866 - 2004. To meet the needs of our data users, the Louisiana Field Office, with the support of the Louisiana State University Department of Agricultural Economics and Agribusiness, has incorporated historical data into this annual statistics bulletin. The data in this section represent the complete existing data series for each of the commodities included. Commodities for which the data series ended prior to the publication of the last historical bulletin are excluded.

Many of these datasets are available for downloading to your computer via the National Agricultural Statistics Service's *Quick Stats: Agricultural Statistics Data Base*, found on the Internet at: <http://www.nass.usda.gov/QuickStats/>

Cash Receipts from Farm Marketings, 1924 - 2009

Year	Livestock and Products	Crops	Total Cash Receipts
-----Thousand Dollars-----

**THE DEPARTMENT OF AGRICULTURAL ECONOMICS AND AGRIBUSINESS
LOUISIANA STATE UNIVERSITY AGRICULTURAL CENTER
LOUISIANA STATE UNIVERSITY**

The Department of Agricultural Economics and Agribusiness carries on an extensive and coordinated program of teaching, organized research, and public service in a wide variety of professional subject matter areas.

Subject matter areas include the following:

Agricultural business management
Farm organization and management
Statistical analysis of agricultural data
Resource, rural, and community development
Environmental economics and ecology
Marketing (general and commodity)
Agricultural policy and public programs

Land and water economics
Applied computer programming
Cooperatives
Price analysis
Tropical resource development
International trade
Agricultural credit and finance

The department's research in these areas is part of the organized research program of the Louisiana Agricultural Experiment Station, a division of the Louisiana State University Agricultural Center. Much of the research is in cooperation with other state research stations, the USDA, and other state and federal agencies.

The combination of teaching, organized research, and service provides an efficient, effective, and productive use of resources invested in higher educational and service to the public. Emphasis in research is on solving practical problems important to various segments of the economy. Research results are made available for immediate use in the Louisiana Cooperative Extension Service and other educational and action agencies, including the Department of Vocational Agricultural Education, the Farmers Home Administration, the Soil Conservation Service, the Federal Farm Credit System, other government agencies, farm organizations, business and industrial firms, and individuals. Research results are used in decisions regarding the economics of land use, farm credit, resource, community and rural development, agricultural production and marketing, agribusiness, cooperatives, and public policy.

The department's coordinated teaching, research, and service program provides professional training for careers in a wide variety of occupations in education, agribusiness, industry and government services. Departmental course work is supplemented by courses in other disciplines; programs lead to degrees at three levels: Bachelor of Science, Master of Science, and Doctor of Philosophy. Course work in all curricula provides knowledge of tools and techniques useful for decision making. Emphasis in the undergraduate program centers on developing the student's managerial ability. The graduate program builds on the undergraduate background, strengthening basic knowledge and adding more sophisticated analytical skills and business capabilities.
