Natural Anti-Angiogenesis Drug

Description:

This invention is a novel combination of natural extracts that has the ability to strongly inhibit the development of blood vessels that feed cancer and other diseases related to blood vessel growth, such as psoriasis. The synergistic interaction of these materials increases efficacy, and the body can readily absorb the extracts through the skin. This material has also shown promise *in vitro* to overcome cells' natural drug resistance and defenses.

Advantage:

- All natural drug
- Strongly inhibits blood vessel growth
- Non-toxic

Commercial Uses:

- Anti-cancer drug development
- Rheumatoid arthritis drug development
- Psoriasis drug development
