2009

Agriculture: Backbone of Louisiana's Economy

This publication tabulates the value of Louisiana agriculture in 2009. Agents and specialists of the LSU AgCenter's Louisiana Cooperative Extension Service, as well as those in other agencies – both private and public – compiled the data. Their analysis focuses on the animal, forestry, fisheries, plant and wildlife commodities that comprise our vital agricultural industry. The agricultural industry continues to contribute significantly to the state's economy and has the potential for increased benefits through value-added processing.

The 2009 production year was another challenging one for many in the state's food and fiber sector. As a consequence of the downturn in both the domestic and international economies, there was much less optimism regarding agricultural revenue heading into 2009. For many agricultural producers, a consequence of hurricanes Gustav and Ike was a significant need for improved production and profitability in 2009. Although lower input costs, led by reductions in fuel and fertilizer prices, helped create a more positive financial foundation for producers, this was quickly overshadowed by lower commodity prices and a production year that proved to be one of extremes. Early season drought conditions were followed by heavy and persistent rains for much of September and October, creating significant harvest delays and resulting in both quantity and quality reductions for many of the state's row crop and forage producers.

While agricultural products often are considered less susceptible to downturns in the economy than other consumer goods, the prolonged nature of the current recession had dampened consumer confidence and decreased demand throughout the state's food and fiber sector. For most commodities, lower prices certainly were an expression of lower demand and reduced speculative investment in agricultural commodity markets. Lower home starts created difficulties for the state's forestry sector, with mills either curtailing or ceasing operations. Lower demand also was one of the factors leading to the closing of a major poultry processing facility in the state. Although that plant has been purchased and reopened, it currently is operating at significantly reduced capacities. This had implications for the livestock sector in 2009 and will likely continue to affect that sector into the future, at least until the facility returns to full capacity.

The adverse weather conditions that hampered the agricultural sector at the end of the 2009 production year unfortunately persisted into early 2010. A significantly colder- and wetter-than-normal winter limited producer's ability to repair fields affected by harvesting under less-than-ideal conditions. If these weather patterns continue to persist through the spring, such conditions could have a substantial impact on crop acreage and production in 2010 – particularly if producers are forced to shift acres from commodity to commodity due to their inability to get certain crops planted in a timely fashion.

While the agricultural sector certainly encountered many challenges in 2009, it was able to generate farm gate sales totaling \$4.9 billion. When those commodities were cleaned, processed and packaged, the value added brought in nearly \$3.4 billion. That meant a total contribution to our state's economy of nearly \$8.3 billion.

While farm-gate values and levels for value added for specific commodities may have changed noticeably from the previous year, due to lower output caused by late-season weather problems, lower commodity prices or significant changes in acreages, the food and fiber sector continues to be vital to the state's economy. Cutting-edge research and extension education and outreach efforts remain critical to sustaining these significant economic benefits.

Many communities depend on agriculture, forestry, fisheries and wildlife for local jobs and economic well-being. The heart of agronomic agriculture is found in northeastern, southwestern, and south central Louisiana. Forestry production is mostly in the hill parishes, and fisheries production takes place mostly along the coast, although the aquaculture production of catfish is located mainly in the northeast Louisiana delta.

Agriculture, forestry and fisheries are more than a business and major job contributor to those who work the industries day in and day out. It truly is a way of life. Families have lived on many of these farms or forest lands or in these fishing villages for generations – following a preferred way of life even though it means hard work, long hours, high risks and sometimes low incomes.

Each new production season has risks associated with commodity prices, trade agreements and higher input costs, as well as uncertainty related to the weather. These conditions make the discovery and adoption of new agricultural technology developed by the LSU AgCenter more important than ever to our state's producers.

Agriculture is a highly sophisticated segment of the national and world economy; becoming increasingly more so every year. That is the reason we at the LSU AgCenter continue to support agriculture and consumers with factual information provided by a well-trained faculty of extension agents, specialists and research scientists.

Those of us in the LSU Agricultural Center (the Louisiana Cooperative Extension Service and the Louisiana Agricultural Experiment Station) are proud to be part of Louisiana's agricultural industry, and we are committed to serving that industry and the citizens across the state of Louisiana in the years ahead.

Sincerely,

A handwritten signature in cursive script, appearing to read "Paul Coia".

Vice Chancellor, LSU AgCenter, and
Director, Louisiana Cooperative Extension Service

Louisiana Summary

Agriculture and Natural Resources

2009

The statistical information in this summary is compiled from estimates made by extension agents of the LSU AgCenter after consulting with agricultural agency representatives, agricultural and agribusiness leaders and others and after study of various reports and resource materials. State specialists check parish-level data for specific commodities to ensure accuracy and consistency of production information. Additional review of data is conducted by the Project Director, Dr. John Westra, in consultation with external sources, including state and federal statistical agencies. Any inquiries about the data in this publication should be directed to Dr. John Westra in the Department of Agricultural Economics, LSU AgCenter, who oversees the process of gathering all information for the Louisiana Summary.

Although this material is reasonably accurate and can be used for planning and other general information purposes, this is not the official document of agricultural data for the state. Official statistical data are gathered, summarized and published by the USDA – National Agricultural Statistics Service, Louisiana Field Office, P.O. Box 65038, Baton Rouge, LA 70896. Reproduction or publication of information in this summary should acknowledge the unofficial nature of the statistics.

A gross value has been computed for each commodity, which in some cases includes a value from natural resources and, consequently, may not represent income to farmers. Gross farm values were calculated using calendar-year, market-weighted, state-level average prices, when available. The gross value is an indicator of the commodity's contribution to economic activity in the state, but is not an indicator of farm profits. Production costs greatly affect profit (or loss) for many commodities. Even when gross income increases over previous years, corresponding increases in production costs may decrease farm profits.

In the state summaries, the value added in cleaning, processing, packaging, marketing and transporting commodities is an estimate of the total contribution of agriculture and natural resources to the state's economy.

The state summary is not an exact summation of all parish reports as adjustments may occur due to changes in average prices received, or to accommodate information from other sources.

In each parish table only commodities that were of commercial economic value in that parish this year were listed. In some instances, the number of producers or the number of acres in a parish were not available. An asterisk is used to avoid confidential information from being released, when too few producers are present for that commodity. Within some commodity groups, such as grains, fruits and commercial vegetables, the total number of producers has been omitted because some producers grow several different crops within the group. Adding together the producers of individual crops would not give a true total for the group.

Animal Enterprises

Total farm income for all animal enterprises was \$1.356 billion for 2009, down 12 percent from \$1.537 billion in 2008. Value added was \$594 million. Total value of all animal enterprises in the Louisiana economy was \$1.950 billion, down 16 percent from \$2.316 billion in 2008.

Beef Cattle

In 2009, the Louisiana beef cattle industry still had to deal with the high cost of inputs and lower-than-expected or lower-than-hoped-for calf prices. Cow numbers in 2009 totaled 602,450 with a reported 11,534 producers. Gross farm income from beef cattle declined from \$343.3 million in 2008 to \$329.2 million in 2009.

The gross farm value of steer sales in 2009 was \$113.4 million; lower than the \$121.1 million reported in 2008. The gross farm value of heifer sales declined by \$7.6 million; from \$97.9 million in 2008 to \$90.3 million in 2009.

The number of cow-calf pairs sold in 2009 increased to 58,106 pairs. These pairs sold for \$58.1 million, up slightly from 2008. Yearling cattle sold for \$38.3 million in 2009. Gross farm values of 61,657 cull cows and 7,853 cull bulls were \$22.6 million and \$6.4 million, respectively.

The total value of the beef cattle industry in 2009 was \$365.4 million of which \$36.2 million was value added and \$329.2 million was gross farm sales.

Dairy

Milk production was reported by 14 parishes in 2009. Three parishes in the southeastern part of the state and one parish in the northwestern part accounted for about 93 percent of the milk production, about 92 percent of the herds and 93 percent of the dairy cows.

The number of dairy farms declined from 186 in 2008 to 166 in 2009. The number of milking cows decreased from 23,218 head in 2008 to 20,105 head in 2009. Total milk production decreased from 316.1 million pounds in 2008 to 273.1 million pounds in 2009.

The on-farm value of milk decreased substantially from \$65.4 million in 2008 to \$39.3 million in 2009. The decrease in the on-farm value of milk in 2009 was due primarily to a much lower average price per hundredweight (cwt) of milk (\$14.39 per cwt in 2009 as compared to \$20.70 per cwt – a 30 percent reduction in price per hundredweight from 2008 to 2009). To a lesser extent, the loss in number of cows (3,113 or 13 percent) and a slight loss in production per cow contributed to the decline in value.

Due to the lower price of milk and the higher cost of feed, fertilizer and fuel, the majority of dairy producers had to use savings and equity to cover some of their operating expenses for part or all of 2009. This situation does not bode well for the coming production year since similar economic and financial conditions will be present in 2010.

The value of cull cows, bred heifers, mature cows, breeding-age bulls and calves was \$7.9 million. The total value of milk and animal sales to

Louisiana dairy producers was \$47.2 million. Value added contributed \$66.5 million more. The total economic contribution from dairying in Louisiana, including milk sales, animal sales and additional processing, was \$113.6 million.

Horses

The horse industry is an important component of the agricultural economy of Louisiana. In 2009, 203,159 horses were owned by an estimated 48,883 people, a slight (2 percent) increase from 2008. The horse industry has three sectors – 30 percent of it involves racing, 15 percent show or competition and 55 percent recreational horse owners.

The race horse industry was made up of 1,438 breeders who own 13,800 mares that produced 10,385 foals that were sold in 2009 for \$83 million. A total of 304 breeders own 1,456 stallions that were bred to 13,924 mares, generating income from stud fees of \$34.8 million. The total gross farm income generated from race horse production was \$117.8 million.

An additional 2,585 race horse owners owned 15,330 race horses in training or on the track with a gross farm value of \$183.9 million. The gross farm value of the entire race sector (owners and breeder activities) of the horse industry in 2009 was \$301.7 million. This was up 9 percent from 2008 and could be associated with the race industries improved incentive fund program, which has promoted more breeding of horses and horses being trained by owners within Louisiana.

The show and competition horse industry (horse shows, barrel racing, cutting, roping, team penning and others) is composed of 2,994 breeders who own 9,287 mares which produced 6,353 foals that were sold for \$25.4 million. These breeders own 1,115 stallions which bred to 5,547 mares, generating \$8.3 million in income from stud fees. The total income generated from show and competition horse production was \$33.7 million.

Another 4,770 owners compete on their 13,478 horses, which had a gross farm value of \$67.4 million. The total gross farm value of the show and competition sector of the horse industry was \$101.1 million. This total was down 9 percent from last year and could be the result of higher fuel and feed cost experienced during 2009.

A large portion of the horse industry was recreational. The horse has been used for comfort, exercise and enjoyment for quite some time. Approximately 30 percent (10,350) of the recreational horse owners bred 24,498 mares and sold 14,201 foals in 2009 for \$21.3 million. These horse enthusiasts owned 2,633 stallions, which were bred to 9,014 mares generating income from stud fees of \$4.5 million. The total income from production in the recreational horse industry was \$25.8 million in 2009. Another 26,442 recreational horse owners have 62,111 horses valued at \$93.1 million. The total economic contribution of the recreational horse industry is \$118.9 million.

There are a total of 203,159 horses owned by 48,883 people in Louisiana. These horses had a gross farm value of \$521.6 million in 2009. The average horse owner spends about \$4,000 annually on feed, tack, equipment, veterinary supplies and medicines. This results in an estimated expenditure of \$828 million on horses and a total economic impact of \$1.95 billion.

In addition to the value of horses produced and maintained in Louisiana, the activities of the horse industry generate a tremendous cash flow for the state. The four racetracks employ 3,000 people and generate expenditures of \$1 billion each year. The show and competition industry conducts an estimated 500 activities per year and generates \$20 million in expenditures. With the value of horses, expenditures on horses and the activities in which they engage, the economic impact of the horse industry is estimated at \$2.4 billion per year. This value coincides with a recent study by the American Horse Council that estimated the Louisiana horse industry generated \$2.45 billion per year in economic impact.

Poultry

Broilers and Eggs

Poultry production continues to be the largest animal agricultural industry in Louisiana and is second only to forestry in total income production for all agricultural commodities.

In 2009, there were 324 Louisiana growers who produced 827.9 million pounds of broiler meat. The gross farm value of these broilers was \$372.6 million. Commercial broilers are produced in 11 parishes including Bienville, Claiborne, Jackson, Lincoln, Natchitoches, Ouachita, Sabine, Union, Vernon, Webster and Winn.

There were 134 breeder flock producers in Louisiana during 2009 and they produced 22.3 million dozen eggs with a gross farm value of \$46.8 million. There also were 12 pullet producers who produced 1.2 million pullets with a farm value of \$12.2 million.

In Louisiana, there were 475 edible egg producers (commercial and small producers) during 2009. Table egg production was 21.3 million dozen eggs. The gross farm value for commercial egg production was \$16.2 million for the year.

The gross farm value for all poultry production in Louisiana was \$450.8 million in 2009. The value added to the Louisiana economy from poultry production was estimated to be \$432.8 million last year. The total value of poultry production in Louisiana was \$900 million in 2009, down 25 percent from 2008.

Ratite and Other Exotic Fowl

The sale of ratites and exotic fowl did not generate any funds in Louisiana during 2009. The decline in birds and values continued.

Quail

There were 20,656 birds produced during 2009 by 29 producers. Quail generated a gross farm value of \$72,296. Total value of quail production, including value added, was \$75,911 last year.

Rabbits

The production of rabbits for meat and exhibition involved 426 producers in Louisiana during 2009. The fryer industry produced 85,668 pounds of meat. Louisiana rabbit producers generated \$134,389 in gross farm

income. With value added of \$12,767, the total value of rabbit production during 2009 was \$147,156.

Sheep and Goats

Sheep or goat production was reported in 56 Louisiana parishes during 2009. Sheep were produced by 366 producers, which is a slight decrease from last year, while 1,184 producers raised goats, marking a slight increase from last year.

Total number of lambs marketed (slaughter, feeder and club/show lambs) was estimated to be 2,158 for approximately \$260,000 during 2009, down considerably from the previous year. Stocker sheep sold numbered 526 head, up slightly from 2008. Cull sheep sold were estimated at 1,177 head, down considerably from the previous year. Wool production was estimated at 20,723 pounds, down somewhat from 2008. Total farm-gate value of sheep sales was \$2.4 million in 2009, and total value was \$2.6 million when approximately \$200,000 in value added contributions were included. This was up significantly from the previous year.

Goats were produced by 1,184 farmers in Louisiana in 2009. Total number of slaughter goats marketed was estimated to be 8,918 head, down from 2008. Stocker goats sold numbered 3,714 head in 2009, a slight decrease from the previous year. There were 2,509 cull goats marketed this year, slightly fewer than the past year. Goats sold as club/show goats numbered 2,662 head, a slight increase over 2008. Gross farm value of goats sold in Louisiana in 2009 was \$2.5 million, up 25 percent from the past year. Total value of production was \$2.7 million once value-added contributions were included.

Swine

Louisiana pork producers numbered 423 in 2009 compared to 367 in 2008. St. Martin (with 60 producers), Calcasieu (30), Vermilion (28), Rapides (25), Beauregard (24) and Richland (20) parishes reported the largest number of swine producers. The number of sows reported in 2009 was 2,950, up from 2,566 in 2008. Show pigs, totaling 2,646 sold for \$660,000, down slightly from the previous year. Feeder pig sales of 16,718 had a gross farm value of \$270,000 in 2009, up substantially from the previous year. Slaughter hog sales in 2009 were set at 6,662 head with a gross farm value of \$730,000. This reflected an increase in heads sold but a slight decrease in value due to a decline in hog prices from 2008 levels. There were 1,544 cull animals (sows and boars) sold in 2009, and those were valued at \$150,000. The gross farm value of all classes of swine in 2009 was \$1.8 million. The estimated value added from the swine sector was \$450,000 in 2009, so when that was added to the gross farm sales, the total value of all swine production in the state was \$2.26 million in 2009.

Exotic Animals

Exotic animal producers had gross farm sales of \$130,000 million in 2009, down slightly from \$160,000 the past year. Total value of production for exotic animals, including value added, was \$140,000 in 2009.

Fisheries and Wildlife Enterprises

Total farm value of all fish and wildlife enterprises was \$528.9 million in 2009, down 6 percent from \$557.6 million in 2008. Value added was \$356.9 million. The 2009 total value of all fisheries and wildlife enterprises to the Louisiana economy was \$882.8 million, down 6 percent from \$936.1 million in 2008.

Aquaculture

Louisiana has long been recognized as supporting one of the most diverse aquaculture industries in the United States. Species and products such as crawfish, catfish, alligators, oysters, tilapia, baitfish, hybrid striped bass, soft-shell crawfish and crabs, ornamental fish, baby turtles, a variety of freshwater game fish and other minor species all have been commercialized successfully.

Louisiana's producers continue to lead the nation in crawfish, oyster, pet turtle and alligator sales, but the state's aquaculture crops generally exhibited downward trends during 2009. Gross farm sales were estimated to be \$193.2 million, down approximately 11 percent from 2008. Value added to aquaculture products was estimated to be \$125.6 million, resulting in a total value of \$318.7 million from the aquaculture sector to the state's economy for 2009.

Estimates from the field indicate farm-raised crawfish production occupied 173,078 acres during the 2008-2009 season, down approximately 6 percent from the previous year. In contrast, the estimated number of producers in 2009 decreased by 15 percent, suggesting most of the acreage reduction was among smaller crawfish farming operations.

Estimated average yields per pond acre (567 pounds) were lower over most of the crawfish-producing areas of the state; likely reflecting higher harvesting costs and reduced crawfish prices later in the season – both of which would decrease harvesting efforts by producers and result in lower production per acre. According to estimates from the various crawfish-producing parishes, more than 98 million pounds of farm-raised crawfish were sold for \$115.7 million during the 2008-2009 season, making farm-raised crawfish the state's most valuable aquaculture commodity.

Despite continuing declines in acreage, Louisiana still ranks fourth among catfish-producing states in the United States. Declines in catfish acreage and production continued and accelerated not only in Louisiana but throughout the major producing states in 2009, primarily as a function of increasing costs for feed and energy and continued importation of cheap catfish substitutes from overseas. According to field estimates, Louisiana catfish acreage decreased by 41 percent to 2,622 acres of ponds, but 19 producers sold more than 10 million pounds of catfish valued at \$8.1 million.

Following several years of impressive growth in farmed alligator production, industry expansion has reversed in response to the decreased demand for alligator products as the global economic recession worsened in 2009. Tag data from the Louisiana Department of Wildlife and Fisheries suggest the number of alligators produced and harvested in 2009 was down 10 percent from the prior year. Nonetheless, the 2009 farm-gate value was

estimated at \$32.3 million for farm-raised alligators and \$1.3 million for the wild alligator harvest. In addition, \$200,000 of wild alligators were harvested in the state but without a parish designation.

Pet turtle hatchling production was down sharply in 2009, with production of only 2.2 million hatchlings. This decline was the result of several factors, including extensive damage to facilities and loss of breeding stock caused by Hurricane Gustav in late 2008, global economic trends (virtually all hatchlings are exported due to FDA restrictions on domestic sales) and increasing self-sufficiency in China's farmed turtle industry. Nonetheless, estimated hatchling sales exceeded \$2.1 million in 2009.

Louisiana's bait fish and minnow industries also declined sharply in 2009 to \$300,000 in gross farm value – with the decline also coming in response to general economic trends.

Estimated oyster sales from 782 producers in Louisiana were \$34.2 million in 2009, up slightly from the previous year. This value does not include \$2.1 million for 87,074 sacks of oysters harvested out of state yet sold in Louisiana. The oyster production data reported in this summary represent a one-year lag to avoid estimation and projection errors from using data from only part of the year (figures for oysters reported this year are from 2008). The reason for the lag is that data for oyster sales are compiled and provided by the Louisiana Department of Wildlife and Fisheries to the National Marine Fisheries Service, and this information is not available until the middle of the year following production.

Fisheries

The harvest of freshwater and marine fish and shellfish in Louisiana continues to contribute significantly to the state's economy. Fisheries landings are recorded by two government agencies. The Louisiana Department of Wildlife and Fisheries receives monthly reports from the initial buyers (processors, dealers, etc.), who are required to record every transaction. Species, weights and dockside sales values of the landings are reported for all commercially harvested species.

The National Marine Fisheries Service also is responsible for estimating fisheries landings, using both regional National Marine Fisheries Service data collectors and state Department of Wildlife and Fisheries reports. The information reported here is from those two cooperating sources.

The freshwater fisheries and marine fisheries information presented in the report this year (2009) reflect the calendar year 2008 – an exception to the way most items are reported focused on 2009. The one-year lag is necessary to ensure data accuracy. Real-time reports on fisheries landings are not available until four months after the fact, and final statistics often are six to seven months behind. Estimating landings for the second half of the year based on landings reports from the first half is inaccurate. This method of reporting fisheries landings data has been in place since the 2004 Louisiana Summary of Agriculture and Natural Resources. Data prior to that 2004 volume may not be directly comparable to the information reported since 2004, because of the different estimation method. To compare state-level landings for years prior to 2004, on a calendar-year basis, please consult the US-NOAA-NMFS Web site.

One final caveat is that parish totals for fisheries landings will not equal the state total because of legal confidentiality requirements. When there are fewer than three sources in a parish that report landings of a fisheries commodity in that parish, the number of landings cannot be publicly released by the state Department of Wildlife and Fisheries or the National Marine Fisheries Service without breaking confidentiality requirements. Therefore, there may be parishes included in this volume for which no landings or values were provided by either agency but for which there was catch. Furthermore, fisheries landings are reported for the parish in which the fish are offloaded – not the parish in which the boat and its crew may be domiciled or the parish where the catches actually were made.

Freshwater Fisheries

Freshwater finfish are comprised primarily of bowfin, catfish, buffalo, shad, gar and carp. These fish typically are less valuable on a per-pound basis than marine finfish. Total freshwater finfish landings in 2008 decreased in value by 20 percent from 2007 levels to \$3.9 million on 10.9 million pounds sold by 1,723 commercial fishermen.

Catfish are the mainstay of the more valuable freshwater species, and price per pound for catfish remained relatively stable. Sales of catfish caught commercially in Louisiana waters were \$1.9 million on 4.3 million pounds in 2008.

Most wild crawfish are caught in the Atchafalaya Basin, where water levels fluctuate as inflows are controlled at about one-third of the combined flows of the Mississippi and Red rivers. Although wild crawfish compete in the marketplace with farm-raised crawfish, some consumers prefer the wild product because of its frequently larger size. The volume of the wild crawfish harvest is almost completely constrained by the timing and duration of the annual winter/spring floodwater event in the Atchafalaya Basin. The 2008 crawfish season was a productive one in the Atchafalaya Basin with prolonged floodwaters increasing production. As a result, freshwater crawfish landings were 15.4 million pounds – up somewhat from 14.9 million pounds in 2007, up substantially from 1.5 million pounds in 2006, more than the 2005 level of 15.2 million pounds, but far less than the 1993 record level of 50 million pounds. Wild crawfish sales were \$9.3 million in 2008, up nearly 10 percent from \$8.5 million in the previous year. In addition, nearly 81,000 pounds of crawfish were caught in out-of-state waters but sold in Louisiana for \$59,000 in 2008.

Overall, landings from the freshwater fisheries sector in 2008 had a gross value of \$13.2 million. When value added (\$11.2 million) was included, freshwater fisheries had a total value of \$24.4 million in Louisiana in 2008.

Marine Fisheries

Marine finfish landings for food are varied and complex, with about 6.5 million pounds total of 80 different species being landed. As it happened in 2005, the 2008 marine fisheries landings in Louisiana were adversely affected by two major hurricanes. In 2008, the top five species landed by value were yellowfin tuna, red snapper, black drum, king mackerel and swordfish.

Total saltwater finfish landings, excluding menhaden, were valued at \$11.2 million in 2008, down significantly from \$19.6 million for 2007. In addition, 67,000 pounds of saltwater finfish were caught in out-of-state waters and sold for \$100,000 in Louisiana.

Landings of menhaden, a low-value but high-volume nonfood finfish species, were 741 million pounds in 2008, down from 790 million pounds in 2007. The catch was valued at \$48.8 million, up slightly from \$45 million in 2007. Menhaden value continued to increase in 2008, selling for approximately 6.25 cents per pound, up nearly a penny per pound. Menhaden oil and meal are sold on the world market for industrial purposes, animal feeds and omega-3 dietary supplements, among other uses, and the prices received for menhaden products is a function of the world supply of oils and meals, particularly those produced by the fisheries for the anchovetta of the Pacific Coast of South America.

In 2008, 11.4 million pounds of oysters were landed from private reefs and from wild reefs. Value was approximately \$3.01 per pound of oyster meat. To calculate prices per sack, assume 7.4 pounds of shucked oyster meat per sack (\$22.40 per sack). Gross value of oysters harvested in 2008 was \$34.2 million, down from \$40.1 million in 2007. In addition, 660,000 pounds of oysters were harvested in out-of-state waters and sold in Louisiana for \$2.1 million in 2008.

Blue crabs constitute nearly all of the Louisiana crab harvest, with stone crab claws making up less than 0.01 percent. Louisiana hard crab landings normally range from 40 to 50 million pounds. In 2008, hardshell blue crabs landings were 43.8 million pounds with a gross value of \$33.9 million. In addition, more than 59,000 pounds of crabs were caught in out-of-state waters and sold in Louisiana for \$74,000. This decrease in landings from the previous year (when 44.6 million pounds were landed) was due in part to the damage to gear and infrastructure from hurricanes Gustav and Ike.

In 2008, production of softshell crabs (5,900 pounds) and peeler crabs for the shedding business (88,240 pounds) was the lowest ever recorded. Many shoreside shedding facilities were never rebuilt after the storms of 2005, and those that had been restored were damaged or destroyed by the 2008 storms.

Louisiana shrimp landings in 2008 consisted of five species: white shrimp, brown shrimp, seabobs, rock shrimp and pink shrimp. White shrimp historically have provided 50-60 percent of the harvest by weight and around 70 percent by value; but in 2008 contributed 71 percent (63.1 million pounds) of total weight and 82 percent (\$107.4 million) of total value. In 2008, brown shrimp landings totaled 25 million pounds with a value of \$22.7 million dockside. The weighted-average price for shrimp was \$1.46 per pound in 2008, up significantly from \$1.26 in 2007, which was also up from the previous year. Overall landings of 89.7 million pounds were down from 109.5 million pounds in 2007, due to both the hurricanes of 2008 and reduction of effort due to overall reduction of profitability in the industry. Shrimp landed in Louisiana had a gross value of \$132.2 million in 2008, down from \$138.1 million in 2007. Extensive damage to the shrimp fleet and infrastructure from the hurricanes of 2005 continued to affect both landings and prices in 2008 and was exacerbated by the effects of the 2008 hurricanes.

In 2008, all marine fisheries landings in Louisiana were valued at \$226.1 million at dockside. With value added (\$214.8 million), the total contribution to the state's economy from marine fisheries was valued at \$440.9 million in 2008.

Fur

The 2008-2009 harvest of fur animal pelts in Louisiana had a gross farm value of \$51,714. This amount represented fur production only and does not include any value associated with meat production, predominately from raccoon and nutria carcasses. Animals pelted and sold totaled 15,391.

Gross farm value of pelts sold was down significantly, almost \$164,000 from the previous year. Likewise, the number of pelts sold declined by 31,000 from 2007-08 figures. Without exception, every species of fur animal had fewer pelts taken this past season. In addition, the average price paid for pelts during this reporting period was lower than the past year.

The two biggest drops occurred with nutria (down 20,833 in pelt numbers and 43 cents in pelt prices from last year) and raccoon (down 6,657 in pelt numbers and \$2.65 in pelt prices from last year).

Average gross farm value of individual pelts, regardless of species, was \$3.36 in Louisiana. Nutria accounted for the greatest number of furs taken (40 percent), with the remaining fur production coming from raccoon, muskrat, mink, opossum, river otter, red fox, grey fox, bobcat, beaver and coyote. Pelt prices varied from \$0.50 for opossum to \$13.20 for gray foxes. Excluding revenues from coastwide nutria control program, total value of furs sold by trappers, including value added, in Louisiana during the 2008-2009 trapping season was \$63,505.

Nutria removals in the state associated with the coastwide nutria control program accounted for 334,038 animals being taken. This was slightly higher than the 308,212 animals taken under the program during 2007-08. The incentive payment for nutria removal was \$5 each.

Nutria removed under the program, along with the gross dollar value of all other animals pelted, totaled \$1.72 million in 2009. This figure is only slightly lower than the \$1.75 million recorded the preceding year. Revenues generated for trappers from nutria under the coastwide nutria control program almost offset revenue losses experienced with decline in fur numbers and prices for all other species during 2008-2009.

Hunting Lease Enterprises

The value of recreational hunting in Louisiana is a function of the income derived from hunting lease enterprises.

There were 6,765 producers or landowners who leased land in the state during the 2008-2009 hunting season. This consisted of 5,428 individuals who leased land for upland game hunting (primarily for deer and turkey) and 1,337 individuals who leased land for waterfowl hunting. Of the 8.1 million acres leased for hunting in Louisiana, 6.4 million was for upland game and 1.7 million was for waterfowl.

Total gross farm value for hunting leases was \$89.8 million, with \$48.9 million for upland game and \$40.9 million for waterfowl. During the 2008-2009 hunting season, average lease rates were \$7.67 per acre for upland

game and \$23.65 per acre for waterfowl. Waterfowl leases averaged \$15 per acre in coastal Louisiana areas and \$50 per acre in other areas of the state. For upland game, leasing rates varied greatly throughout the state, ranging from \$1 per acre to \$30 per acre.

As with most things related to real estate, location (to the best hunting) was the most important factor in determining lease rates. In addition to location, habitat quality and species involved determined the lease rate. Given the finite nature of lease locations, as demand for good hunting locations to lease increases, so does the price or lease rate. Total value of hunting leases, including value-added components, was \$94.3 million during the 2008-09 hunting season.

Honey

Honey production, 1.7 million pounds collected in 2009, was down 25 percent from 2008 levels of 2.3 million pounds. Early rains and a warm spring were conducive to honey production in some areas, but areas of the state that were dry or had excessive rains, especially in the fall, had little or no honey production. Honey prices continued their increase over 2007 values; ranging from \$1.20 to \$1.50 per pound, with average price per pound of honey being \$1.28 for 2009.

Commercial beekeepers and many hobby beekeepers have developed a large local and state clientele who are purchasing local and state honey compared with the commercially blended and pasteurized honeys. This has greatly improved the sales of state honey and increased the value of Louisiana honey. Some hobby beekeepers still have problems with wax moths, and they all are looking for management strategies to deal with small hive beetles. Beekeepers still have some problems with Varroa mites in the hives, but better management and the new genetic Russian lines of queens continue to help control this problem.

There remains concern for the Colony Collapse Disorder, but Louisiana has not experienced any consequences from this problem that has devastated many of the migratory beekeepers around the country. Colony Collapse Disorder is a stress-related problem that magnifies other situations in the hives, and this information is being used to develop approaches to solving this problem.

The wild populations of honeybees are back, and more and more beekeepers are assisting with collecting swarms and removing bees from structures. The pollination services provided by beekeepers and wild populations are valued by some at over \$400 million nationwide.

African honeybees have been confirmed in eight parishes but have been only a minor problem. Assistance from beekeepers and the Louisiana Department of Agriculture and Forestry have helped to reduce the negative impact of African honeybees in Louisiana.

Gross farm value of honey in Louisiana was \$2.2 million in 2009. Value added from cleaning, processing and packaging honey was \$200,000 million, making the total value of production \$2.4 million in 2009.

Plant Enterprises

The total value of all plant enterprises was \$2.973 billion in 2009, a decline of nearly 8 percent from \$3.225 billion in 2008. Value added was \$2.468 billion for all plant commodities. Total value of all crop enterprises to the Louisiana economy was \$5.442 billion in 2009, down 17 percent from \$6.627 billion in 2008.

Cotton

Land harvested for cotton (225,027 acres) in Louisiana in 2009 was 28 percent lower than the area harvested in 2008. This was one of the lowest levels of harvested cotton acreage on record in the state.

Cotton lint yield on irrigated land was 770 pounds per acre compared to 595 pounds per acre in 2008; and on nonirrigated land, lint production was 693 pounds per acre compared to 483 pounds per acre in 2008. The number of producers in 2009 was 510, down from 596 producers in 2008. Total lint production in 2009 was 338,252 bales, up from 316,626 bales harvested in 2008 but still only about half of the cotton production in 2007 (634,552 bales). In 2009, there were 83,083 acres of irrigated cotton and 141,944 acres of nonirrigated cotton.

Average value of cotton lint sales was \$423 per acre, which means a gross farm value of \$95.3 million for lint. Sales of cotton seed contributed an additional \$102 per acre, adding a total of \$23.1 million for cottonseed. Both lint and seed sales were down in 2009 due to the weather-related decreases in cotton yield at harvest time.

In addition to excessive rain in cotton country in the fall that significantly decreased yield and harvested acres, the reduced farm value of cotton in 2008 also caused fewer planted acres in for 2009. Farmers continued to shift cropping systems to corn and soybeans in response to stronger prices for those commodities compared to cotton. Additional economic forces affecting planting intentions were the higher production costs due to energy and fertilizer price increases.

Gross farm value for both lint and seed was \$118.3 million in 2009 for cotton production, down slightly from \$122 million in 2008. Value added from ginning and processing was \$11.8 million, so the total value of the cotton sector was estimated to be \$130.2 million in 2009.

Feed Grains

In 2009, there were 706,171 acres of feed grains harvested in Louisiana, up slightly from 704,913 acres in 2008. There were 620,331 acres of corn harvested in 2009, nearly identical to the past year at 619,073 acres of corn harvested and the largest acreage of all feed grains. Grain sorghum, with 82,189 acres, was second. There also were 3,651 acres of oats harvested in 2009.

Areas planted and harvested in feed grains continued to remain relatively high, by historic standards, primarily due to strong grain prices at

planting time. Early season drought conditions followed by excessive rain during harvest appeared to have minimal effect on yields – but those conditions may have affected quality of the grain. Reports from the field indicate producers in some parts of the state may be penalized on price for quality issues at delivery.

Gross farm value of all feed grains in Louisiana was \$316 million, a decrease from 2008's sales of \$390.8 million. Value added in 2009 was \$47.4 million, so the total value of feed grain production to the state's economy was estimated to be \$363.4 million in 2009.

Corn

Corn was grown on 1,421 farms in 2009, down slightly from 1,441 farms in 2008. The statewide average yield was 122 bushels per acre in 2009, down from the past year's 139 bushels per acre.

Planting conditions in the spring were dry in 2009. But northern and central Louisiana experienced heavy rainfall in the fall and that adversely affected harvest operations, although not necessarily yields. Quality losses resulted from the delayed harvest, however, and the normal weed, disease and insect problems also were experienced during the growing season.

Gross value of corn production in 2009 was \$284 million, down from \$334.8 million in 2008.

Grain sorghum

Grain sorghum production was lower for 2009 compared to 2008. Sorghum was produced on 245 farms where it was grown on 82,189 acres with an average yield of 68 hundredweight per acre in 2009.

Although average yields were higher in 2009, overall production was lower than 2008 levels, due primarily to fewer acres being planted and harvested. Excessive rains prior to harvest marred the growing season for many producers. Some acres were left unharvested because of extensive water damage and flooding and generally poor field conditions.

Gross farm value of sorghum production was \$31.4 million, down considerably from \$54.9 million in 2008.

Oats

Oat production decreased to 3,651 acres in 2009, down somewhat from 4,334 acres harvested in 2008. Oat yields in 2009 were 76 bushels per acres, down from 85 bushels per acre in 2008. Gross farm value of oat production was \$600,000 in 2009 – half of the \$1.2 million recorded for 2008.

Forestry

The projected Louisiana gross farm value of forest products decreased significantly for the period from Nov. 1, 2008, through Oct. 31, 2009, which constitutes the period reported here for 2009. This marks three consecutive years of significant reductions in the forest products sector of Louisiana's economy and coincides with the sharp contraction in the national economy that began toward the end of 2007.

The 2009 total sawlog harvest decreased by 221 million board feet (26 percent) to a cut of 749.9 million board feet. This represents a 42 percent decline in total sawlog harvest from 2007 to 2009. The pine sawtimber

harvest decreased by 28 percent from the previous year to a total statewide harvest of 629.9 million board feet in 2009. The hardwood sawtimber harvest fell to 120.1 million board feet in 2009, nearly 14 percent lower than 2008 production. Pine chip-n-saw harvested in 2009 totaled 683,000 cords, a decrease of nearly 15 percent from 2008 levels.

The 2009 Louisiana pulpwood harvest was 5.4 million cords, down 760,000 cords (13 percent) from the 2008 harvest. Pine pulpwood harvest decreased 13 percent, from 4.9 million cords in 2008 to 4.3 million cords in 2009. Hardwood pulpwood harvest decreased by 153,000 cords (13 percent), from 1.2 million cords in 2008 to 1.07 cords in 2009.

Stumpage prices for 2009 mostly declined from 2008 levels. Pine sawtimber stumpage prices were 11 percent lower in 2009, averaging about \$237 per mbf statewide for the year. This represents a 30 percent decline in prices within 24 months. Oak sawtimber stumpage prices were 4 percent higher on average around the state in 2009 at approximately \$240 per mbf for the reporting period (a slightly higher average price than pine sawtimber).

Statewide average pine pulpwood prices decreased 18 percent from 2008 levels – although they had increased 32 percent from 2007 to 2008. Hardwood pulpwood prices were 4 percent lower on average after gaining 25 percent the previous year. The average pine pulpwood price for the year in Louisiana was almost \$24 per cord, and the average hardwood pulpwood price for the year was above \$26 per cord. Chip-n-saw prices decreased 8 percent this year to a statewide average of approximately \$42 per cord.

In 2009, Louisiana's private forest landowners received an estimated \$338.9 million from the sale of forest timber, down 31 percent from 2008 and down 44 percent since 2007. Timber harvesting contractors and their employees earned \$381.4 million from harvesting the trees and moving wood to mills. This total was down 22 percent from 2008 levels. This income is recirculated many times throughout the economy, which positively affects local communities.

Christmas tree growers received \$1.01 million from the sale of trees, down 6.4 percent from the previous year. Louisiana-produced pine straw sold for \$41,780 in 2009. In addition, Louisiana's private sector forest tree seedling nurseries produced a crop worth \$70,000 in 2009.

The payroll and income derived from money generated by the forestry and wood products industry totaled an estimated \$2.47 billion in 2009, a decrease of almost 28 percent from 2008 totals. This total is more than \$1.2 billion lower than it was in 2007, a reduction of 34 percent in two years. The gross farm income produced by all forestry-related products, such as timber, pine straw and Christmas trees totaled \$721.4 million in 2009, down 28 percent from the \$952 million generated in 2008. The value added through further processing and delivery was \$1.7 billion, so the total value of the forestry industry in Louisiana was estimated to be nearly \$2.5 billion in 2009.

Fruit Crops

Louisiana's commercial fruit production is diverse, ranging from berries, citrus and peaches to muscadine grapes and mayhaws, among others. Gross farm value of all commercial fruit crops in Louisiana in 2009 was

\$69.2 million. Value added contributed \$8.3 million to the total \$77.5 million value of fruit production in 2009.

Blackberries

Gross farm value of blackberries increased in 2009 and was \$370,000, up slightly from \$300,000 in 2008. Stronger prices in 2008 encouraged more entry into blackberry production and resulted in more producers (121) and blackberry acres in production (78) in 2009. Although average production was down slightly, from 2,412 pints per acre of blackberries during 2008 to 2,335 pints in 2009, overall production was up in 2009 to nearly 183,000 pints.

Blueberries

Blueberries were grown by 123 producers on 297 acres. The primary blueberry growing areas are Desoto and Washington parishes with 167 acres in total. Most producers in other parishes grow less than 1 acre of berries and sell fresh fruit to local clientele. Gross farm value of blueberries in 2009 was \$1.6 million, down slightly from 2008.

Citrus

The Louisiana citrus industry involves 411 growers in 18 parishes who grew 418 acres of navels, 375 acres of satsumas and 48 acres of other types of citrus during 2009.

Plaquemines Parish is the leading producer of citrus in Louisiana with 525 acres of citrus that had gross farm sales of \$5.6 million in 2009. Lafourche produced 97 acres of citrus with sales of \$1.1 million in 2009.

Although some is sold through traditional marketing channels, the majority of Louisiana citrus is sold by direct marketing at roadside stands and farmers markets. Peddlers buy citrus on the farms and resell it across the state. Growers also deliver citrus to grocery store warehouses, individual grocery stores and fruit stands.

Satsumas were grown by 242 producers on 375 acres in 2009. Total satsuma production was 183,378 bushels and it sold for \$4.6 million in 2009. Navel oranges were grown by 179 producers on 418 acres with 166,803 bushels being produced in 2009. Gross farm value of navel orange sales was \$4.2 million. Gross farm value of all citrus production was \$9 million in 2009.

Mayhaws

The gross farm value for mayhaws was \$140,000 in 2009. Orchard mayhaw trees produced nearly 127,000 pounds on 141 acres. Some of the orchard mayhaw acreage with older trees is starting to produce yields above 2,000 pounds per acre, although damage from fire blight also reduced yield on some other trees by more than 50 percent. The registration of streptomycin for use on mayhaws should reduce the fire blight problem. Native mayhaw harvest was light in 2009 with 443 acres producing 17,000 pounds.

Miscellaneous Fruit

Many miscellaneous fruits were planted as either small commercial plantings or as backyard plantings. These crops include figs, grapes, pears,

plums, apples and persimmons. These fruits were planted on approximately 700 acres and had an estimated gross farm value of \$200,000.

Muscadines

Reports about muscadine production were divided into fresh fruit production and commercial production.

Muscadines currently are grown for fresh fruit on 53 acres by 35 growers. Fruit was usually sold at \$5 to \$12 per gallon with an average of \$10. The lower prices generally were used at U-Pick operations.

Production for juice and wine was considered commercial muscadine production. Growing muscadines for wine production is concentrated in East Feliciana Parish. A late freeze killed most of the fruiting bud on vines in the parish, which caused a 62 percent decline in production.

Louisiana produced 36 tons of commercial muscadines on 18 acres in 2008. The total gross farm value of muscadines in 2009 was nearly \$400,000.

Peaches

Gross farm value of peaches in 2009 was \$5.1 million. Peaches currently are grown on 342 acres by approximately 40 commercial producers. Chill hours for most varieties were adequate for fruit set in 2009. A late freeze caused minor damage to some varieties, however.

Strawberries

The Louisiana strawberry industry involves 89 growers who produced strawberries with a gross farm value of \$17.4 million on 397 in 2009. Strawberries continue to be the leading fruit crop in the state. Tangipahoa Parish is the leading strawberry-producing parish in the state with 300 acres and \$13.8 million in sales in 2009.

The majority of the Louisiana strawberries are sold by peddlers. Growers also deliver berries to grocery store warehouses, individual grocery stores and fruit stands. The remaining portion of the crop is sold at farmers markets and roadside stands.

Louisiana strawberries now are available as early as November, December and January. This is due to the use of the variety Strawberry Festival, plug plants from nurseries in Quebec, Canada, row covers and wire hoops. These early berries bring a premium price and play a large part in the high returns for the crop.

Commercial Greenhouse Vegetables

In 2009, 16 Louisiana parishes had farms commercially growing greenhouse vegetables in 3.25 acres of greenhouse space. That was essentially unchanged from 2008.

All production was devoted to tomatoes in 2009, and all of it was sold on the fresh market, much of it direct-retail at local markets. Energy costs had become a major cost of production in the winter of 2008 and continued to affect production decisions in 2009, though to a lesser extent as energy costs declined.

Estimated gross farm value of Louisiana greenhouse vegetables was nearly \$1.3 million in 2009. Total value of greenhouse produce, including value added, was \$1.4 million.

Hay Sold

Hay production for commercial sales historically has been a limited part of the total hay production in Louisiana, and 2009 was no exception. Nevertheless, hay produced from 100 acres of alfalfa and 326,710 acres of grasslands was sold by 3,440 producers in 2009.

Yields averaged 3 tons per acre from the grasslands harvested for sale and 5 tons per acre from the alfalfa harvested for sale. Production included 1.1 million tons of grass hay and 500 tons of alfalfa hay.

Compared to values reported in 2008, the acreage of grasslands used for commercial hay production remained relatively unchanged, as did yields. As a result, the total production of the 2009 hay crop for sale was similar in size to that of the 2008 crop. Excellent weather conditions persisted throughout much of the state during the spring and summer months, and conditions in the fall also were favorable for hay production.

Gross farm value for all hay sales was \$117.7 million, which was significantly higher than the 2008 crop that was valued at \$96.9 million. Many Louisiana hay producers realized good prices when they were able to sell their hay into drought-stricken areas such as Texas. Total value of hay production, including value added, was \$130.6 million in 2009.

In addition, hay for all noncommercial purposes was grown on 380,000 acres. With an average yield of 2.8 tons per acre, total production was 1.1 million tons. This production in 2009 was about 24 percent lower than that reported in 2008. The number of acres devoted to hay production decreased by 60,000 acres from 2008 to 2009.

Home Vegetable Gardens

The 2009 gross farm value of home vegetable gardens in Louisiana was estimated to be \$178.7 million. Parish reports indicated there were nearly 349,000 home gardens statewide, suggesting interest in vegetable gardening was up slightly from 2008. The economic conditions of the state and nation may have contributed to the slight increase in home garden numbers.

A survey of Louisiana home gardeners in 2008 showed the average age of gardeners was 62 years with a median age of 67 years. The median Louisiana garden size was 800 square feet, and calculations show it would generate produce valued at \$512 per garden. This value was used to calculate the gross farm value of home gardens in Louisiana in 2009.

Vegetable gardening is not only a hobby but a way of extending the family food budget and freeing up some limited funds for other purchases. In these trying economic times, this is more important than ever. As one might expect, the largest concentrations of home gardens were found in the urban areas of Caddo, Calcasieu, East Baton Rouge, Jefferson, Lafayette and Ouachita parishes.

Nursery Crops

Commercial nursery crop production in Louisiana had a gross farm value of \$82.2 million in 2009. This was 27 percent lower than 2008 production.

Wholesale production was \$1.75 million for the 59 growers of fruit and nut tree nursery stock. Foliage plants, grown by 81 producers, had \$2.9 million in farmgate value in Louisiana in 2009. The largest segment of nursery industry continues to be woody ornamentals (trees and shrubs). The 449 growers produced woody ornamentals valued at \$66.7 million in 2009 at the wholesale level. Bedding plant and floriculture crop production was down in 2009 – with a farmgate value of \$10.9 million. Including value added of \$41.9 million, the total value of the Louisiana nursery industry at wholesale level was \$124.2 million in 2009.

Other Oilseeds

During 2009, 50 acres of sunflowers were harvested and sold for commercial processing. Valued at \$1.1 million, this was down substantially from \$2.7 million in 2009. Total value of other oilseed production, including value added, was \$1.1 million in 2009.

Pecans

The state's pecan crop estimates during the summer ranged from 9 million to 12 million pounds, which is just below the 10-year average (1999-2008) of 12.6 million pounds.

Scab pressure was heavy early in the season, but it was manageable if a good spray program was maintained. Insect pressure was sporadic, and there were no significant losses attributed to a specific insect statewide. Rainfall was inconsistent during the season, with above normal amounts occurring in May, July, September and October. Rainfall was below normal in June and August. Excessive rainfall in October and November hampered harvesting efforts and resulted in a significant decrease in nut quality. Crop losses due to kernel rot exceeded 25 percent in many parishes in the state.

Southern Louisiana producers, especially those in Pointe Coupee Parish, were still recovering from major structural damage to the trees by hurricanes Gustav and Ike in 2008. It will probably take several more years for production to return to normal levels in the most heavily damaged parishes.

Louisiana harvested 7.8 million pounds of pecans in 2009, well below the state average but 2.7 million pounds better than the 2008 crop. The crop was composed of 4 million pounds of improved pecans and 3.8 million pounds of native pecans.

Wholesale prices in Louisiana for natives averaged 75 cents per pound, while improved pecans averaged \$1.40 per pound. There was considerable variability in prices due to quality, location, time of sale and quantity of pecans sold.

The gross farm value for native pecans was \$2.9 million, while improved pecans realized \$5.6 million in sales – for a combined gross farm value of \$8.4 million in 2009. This is \$3.6 million above the 2008 value but

almost \$3 million below the 2007 crop. With value added included, total value of pecan production in the state was \$10.5 million in 2009, twice the value in 2008.

Rice

Rice acreage in Louisiana remained essentially the same – increasing very slightly from 458,204 acres in 2008 to 464,053 acres in 2009. A surprising surge in rice prices for medium-grain rice at planting caused the most dramatic increase in medium-grain rice production in several years.

The crop appeared to be on track to produce record yields of 6,498 pounds per acre harvested. Rain during the harvest season, especially in northeast Louisiana, and a slow second crop in south Louisiana prevented a new record. About 16 percent of the acreage was planted to hybrid varieties and 62 percent to Clearfield varieties. Although the percentage of hybrid acreage has remained fairly steady, Clearfield acreage has increased.

The Louisiana rice crop was harvested by 1,095 producers. The gross farm value was \$399 million, down slightly from the year before. Value added brought the total value of rice production to \$518.6 million.

Increased interest in rice in northeast Louisiana and the firm price outlook seen early in 2009 may result in a slight increase in rice acreage statewide in 2010.

Sod and Turfgrass Production

In 2009, 27 sod farms cultivated 5,204 acres of fine turf grasses. Sod acreage reported was up by 17 percent from 4,448 in 2008.

Louisiana sod farms were not located in storm-flooded areas because sod fields must drain well and have lighter soils. About 60 percent of the turf sod acreage in Louisiana is centipede grass and about one-third St. Augustine grass. The remaining acreage is divided among, Bermuda grass and zoysia.

With most new construction and rebuilding due to the hurricanes winding down and the housing markets continuing to soften due to subprime housing issues and general recession in the local and national economies, demand for sod decreased. On the other hand, shipping costs declined from high levels in 2008 when record fuel and energy prices were a dominant factor in the industry. Nonetheless, local sod remained more cost-competitive, since shipping costs always have been a major component of consumer sod cost. Given these conditions, and continued decline in the housing market, prospects for 2010 do not look as bright as they have been in the sod and turfgrass sector.

Gross farm value of sales was estimated to be \$26 million in 2009. Value added for turfgrass production was \$19.5 million, so the total value of sod and turfgrass production in Louisiana in 2009 was \$45.5 million.

Soybeans

Soybeans were harvested from 1 million acres by 2,309 producers in 2009, and the statewide average yield was 34 bushels per acre. Yields improved over 2008, and total output of 33.8 million bushels was one of the highest on record in Louisiana.

Producers statewide faced the usual weed, disease and insect problems, but a relatively new pest, the red banded stink bug, has become a major insect pest of soybeans in Louisiana. Asian soybean rust continues to be a threat in Louisiana, although its presence so far has not resulted in major yield losses. Reports of Asian soybean rust surviving on kudzu during temperatures in the teens does not bode well for any hope of eradicating this invasive species from Louisiana.

Gross farm value of soybeans in Louisiana was \$335.6 million in 2009, a 9 percent increase over last year's sales of \$308.8 million. Value added to soybean production was \$33.6 million, so the total value of soybean production in 2009 was \$369.2 million, 9 percent greater than 2008.

Sugarcane

In 2009, sugarcane was grown on 417,869 acres (an increase of 16,434 acres or 4 percent above the 2008 crop) by 495 producers (a decrease of 31 producers or 6 percent) in 22 Louisiana parishes. An estimated 390,708 acres (an increase of 15,366 acres or 4 percent) were available for harvest for sugar, assuming 6.5 percent of the total acres were used for seed cane purposes.

The 11 operating factories in the state processed nearly 14 million tons of cane (an increase of 1.7 million tons or 14 percent greater than 2008 levels). There was a decrease in processors with the closing of one factory that operated in 2008 – the St. James facility operated by Louisiana Green Fuels. Further, the Lacassine syrup factory, also operated by Louisiana Green Fuels, did not operate in 2009. In total, the 11 factories produced 1.48 million short tons of sugar (96 pol), which was an increase of 100,000 tons or 8 percent.

Accordingly, the average yield of cane produced per total acre was 33.4 tons (an increase of 2.9 tons or almost 10 percent). The average yield of cane produced from each harvested acre amounted to 35.8 tons (an increase of 3.1 tons or 10 percent). The average sugar recovery at the 11 factories was 10 percent or 204 pounds of sugar (96 pol) per ton of cane; this was a decrease of 20 pounds of sugar per ton of cane or a decrease of 9 percent when compared to the 2008 crop. The yield of commercially recoverable sugar produced per total acre averaged 6,814 pounds (a decrease of 18 pounds or less than 1 percent). The yield of commercially recoverable sugar produced per harvested acre was approximately 7,303 pounds (a decrease of 22 pounds or less than 1 percent).

The gross farm value of the 2009 sugarcane crop was \$447 million for sugar and molasses (an increase of \$89.4 million or 25 percent greater than the 2008 crop). The gross farm value reported above represents 60 percent of the value of the sugar and molasses produced, with the remaining 40 percent for processing and marketing, which amounted to \$305.1 million. Therefore, the total value of the sugarcane crop to Louisiana producers, processors and landlords at the first processing level actually was \$752 million, an increase of \$150.3 million or 25 percent when compared to the 2008 crop. Sugarcane still ranks first in value among the state's row crops.

Although the overall yield of sugar per acre was affected by the wet harvest, the lower-than-expected yield of recoverable sugar per ton of cane was partially offset by the tremendous increase in the yield of cane per

acre. The 35.8 ton cane yield was the second best in the state's history, and the yield of sugar per acre was third best. Further, the total tons processed and the total amount of sugar produced were both fifth best in the state's history even though the total number of acres harvested in those years mostly was more than harvested in 2009.

There has been a gradual trend each year since 2000 toward fewer acres planted to sugarcane in Louisiana, although the overall acreage has been fairly stable for the past three years. (In 2000, there were approximately 496,000 acres, compared to less than 418,000 acres in 2009.) The acreage figures reported by USDA-FSA were slightly higher in 2009 as compared to 2008 because of a new GPS mapping system. Notwithstanding, the fewer acres reported in recent years can be attributed to urban encroachment and a switch to other crops, especially grain in the northern region of the sugarcane belt due to relatively higher commodity prices for grain. With increased sugar prices, however, there is the possibility some of these acres lost to grain crops might return to producing cane. Only time will tell.

The 2009 sugarcane variety census showed Louisiana producers continued to switch to the newer varieties, namely HoCP 96-540 (50 percent of the planted area), L 97-128 (17 percent), L 99-226 (11 percent) and L 99-233 (6 percent), while dramatically decreasing the area planted to LCP 85-384 (91 percent in 2004 to only 6 percent in 2009). For the most part, producers were very satisfied with the performance of the newer varieties, especially HoCP 96-540, L 97-128 and HoCP 00-950.

Although it was expected that cane tonnage would be disappointing in 2009 because of the late planting of the crop in 2008 and the early summer drought, in reality average cane tonnage exceeded all expectations. The 35.8 ton average yield per harvested acre was second only to the 37 ton average yield obtained in 1999. Undoubtedly, the dry harvest conditions of 2008 and the warmer-than-average winter helped to establish good stubble cane stands in the spring of 2009.

Weather records showed that the average temperatures across the sugarcane belt were average to above average for every month of the year, with the exceptions of November and December (Louisiana Office of State Climatology). On the other hand, rainfall was below average for seven months and above average for five months. Rainfall during the period from October through December, when most of the crop is harvested, was more than 10 inches above normal, which made for a very difficult harvest.

Sugar yield at the beginning of the harvest was considerably lower than expected due to the excessive rainfall, which increased extraneous matter, including field soil (mud), in the harvested sugarcane. For every 1 percent increase in extraneous matter, there is a corresponding loss of 3 pounds of sugar per ton of cane. The situation only worsened in December when rainfall amounts throughout the sugarcane belt exceeded record levels. It was reported that one factory had to cease milling operations because of more than a foot of water inside the mill caused by more than 10 inches of rainfall during a six-hour period.

Although rainfall primarily was deficient from January through July, the cane responded to late summer and early fall rains to produce one of the best crops on record, with respect to tonnage. For the most part, there

was above-normal rainfall during the harvest season, which reduced the overall quality of harvested cane.

With the above-normal rainfall in October and the heavier-than-expected cane tonnage, the cane in many fields was lodged (recumbent). The late growth and lodged conditions led to later maturity and lower sucrose content at the start of the harvest, although the maturity of the crop improved during the harvest.

The use of the chemical ripener glyphosate was undoubtedly reduced because of the lodged conditions of the crop. It was reported by the factories, however, that cane treated with ripener was superior in yield of recoverable sugar per ton of cane than cane not treated with ripener. In many cases, producers who treated cane with ripener on clay (heavy) soils had to delay the harvest in those areas until later in the crop when drier conditions prevailed. The only window of drier weather generally occurred from early to mid-November.

Most of the 11 factories processed record cane tonnages during the 2009 harvest, which meant that all factories operated into January 2010. From Jan. 5 through Jan. 14, most weather stations in south Louisiana reported night temperatures below freezing, and from Jan. 9 through Jan. 12, the low temperatures recorded were 20 degrees Fahrenheit or below at several reporting stations (Louisiana Office of State Climatology). Fortunately, most of the cane had been harvested by Jan. 12. It was noted that freeze cracks occurred in most cane remaining in the field during this period, which normally would mean significant deterioration in cane quality would have occurred within one week following such a freeze.

Because of the high cost of fertilizer, in general, many producers used less nitrogen in 2009 than was used in past years – although recommendations have stressed maximum yields of sugar per ton of cane and per acre could be achieved with lower rates of nitrogen. Undoubtedly, the lower rates of nitrogen helped to improve the maturity of the crop, even though cane continued to grow into October, and ultimately increased the yield of recoverable sugar per ton of cane later in the harvest. Producers also continued to apply less phosphorus and potassium in 2009 due to the high costs. Research data have shown that little or no response in yield of cane or sugar per acre could be expected when these nutrients were applied even if soil tests indicated there was an insufficient level of either of these nutrients in the soil.

Although the pricing period is not completed for the 2009 crop, sugar prices have risen sharply in recent months, with the average predicted value for raw sugar at \$23.10 per cwt (hundredweight), an increase of \$2.90 per cwt or 14 percent more than the 2008 price. Molasses prices have remained high and should average about \$120 per short ton at 79.5 Brix or 70.18 cents per gallon, an increase of 2.3 cents per gallon or 4 percent relative to 2008 levels).

Sweet Potatoes

Louisiana sweet potato producers harvested a below-average crop in 2009. The approximately 14,000 acres planted were similar to the level planted in 2008, but harvested acreage for 2009 was just over 13,000.

The potential total production in 2009 was drastically reduced due to weather-related disasters (excessive rainfall during harvest). Total production in 2009 was estimated at 3.2 million bushels, up slightly from the previous year. The average FOB price received for the 2009 crop was \$16 to \$17.50 for a 40 pound box (about \$40 per cwt). Processors paid an average of \$8 to \$12 per cwt.

Total gross farm value for sweet potatoes in 2009 is estimated at \$48.9 million. This is substantially lower than the crop in 2007, which exceeded \$65 million in gross farm value during a year devoid of weather-related crop issues. Total value of sweet potato production, including value added, was \$84.6 million in 2009.

The production year started off on a positive note. Soil moisture and temperatures were ideal for planting from May through mid-June, so the majority of the crop was planted under good conditions. Producers in south Louisiana experienced unusually dry conditions in late June and July across the state. Predictions for crop potential were optimistic in early August but soon changed when production areas were inundated with rainfall in September and October and subsequent prolonged saturated conditions resulted in significant crop losses across the state.

Acreage in 2009 was similar to that of 2008. Even more similar to 2008, when hurricanes Gustav and Ike decimated the crop, yield and quality of the crop were drastically reduced in 2009, as well. The average yield of the crop was reduced approximately 50 percent in 2008 and 2009 compared to 2007. In addition to yield losses in the field, quality losses associated with breakdown of roots and water-damaged roots in storage resulted in reduced pack-out percentages. Due to a reduced supply of cured roots at Thanksgiving, the initial movement of the crop was weak compared to previous years. The price received late in the year for the 2009 crop was similar to the 2008 market value, and the stored crop supply is expected to last through the Easter shipment.

Sweet potato acreage in Louisiana is expected to remain at current levels for the immediate future but is expected to increase in future years as new value-added marketing opportunities develop. The demand for sweet potatoes is increasing in domestic and foreign markets. Long-term expectations are for Louisiana producers to increase their acreage to satisfy the increasing demands of more health-conscious consumers and to take advantage of niche markets to increase profitability.

Vegetables, Commercial

The Louisiana vegetable industry involves 3,600 growers who produce 43 different vegetable crops on 9,150 acres. Those post a gross farm value of \$50 million.

The majority of the vegetable crops grown in Louisiana are sold by direct marketing at farmers markets and roadside stands. Direct marketing offers the producers a retail price, but it comes with some price and marketing risk. The development of farmers markets has greatly enhanced the marketing and value of vegetable crops in the state.

The remaining portions of the vegetable crops are delivered to grocery store warehouses, individual grocery stores and fruit and vegetable stands.

Most of the watermelons grown in the state are sold to peddlers; only a small percentage is sold to the wholesale markets.

Tomatoes (600 acres) at \$14.3 million and watermelons (2,500 acres) at \$6.9 million were the two leading vegetable crops in the state. Southern peas (2,100 acres) with \$5.3 million in sales, peppers (190 acres) with \$3.8 million in sales and cabbage (240 acres) at \$3.5 million in gross farm value rounded out the top five vegetable crops.

Tangipahoa Parish is the leading vegetable parish in the state with a gross farm value of \$10.6 million. The leading crops in Tangipahoa are tomatoes, peppers, cabbage and cucumbers. Plaquemines Parish, with a lot of tomato production, is the second leading parish in vegetable production with gross farm value of \$5 million. Union (\$3.4 million in sales), Caddo (\$3.3 million in sales) and Bienville (\$3.2 million in sales) round out the top five parishes in terms of vegetable sales. Watermelons and southern peas are major crops in these parishes.

Gross farm value of all commercial vegetable sales in the state was \$50 million in 2009. Total value of commercial vegetables in Louisiana, including value added, was \$125.1 million in 2009, a 12 percent increase above 2008 levels.

Wheat

Wheat was harvested from 185,542 acres by 540 producers in 2009 – just 50 percent of the 369,095 acres harvested in 2008. The lower price at planting for wheat in 2009, relative to corn, was the primary cause for this large decrease in wheat acreage.

Yields for 2009 averaged 57 bushels per acre, which was similar to the average yield reported in 2008. Total production was nearly 10.6 million bushels, which was significantly lower than the 21.6 million bushels harvested in 2008. The gross farm value of the 2009 crop was \$52.5 million and was significantly lower (68 percent) than the 2008 crop, which was valued at \$187.4 million. This large decrease in gross farm value of the wheat crop was due to the unfavorable prices received and the decreased wheat acreage. Value added for wheat production was \$5.8 million, which, when added to the gross farm value of \$52.6 million, resulted in a total value of production for wheat of \$58.3 million.

** The marine, freshwater and oyster data presented here are for the year 2008 rather than 2009. Release of fisheries landings data by the collecting agencies occurs 4-5 months after the fact. Another reporting system was used in previous years, so this year's data are not directly comparable to that of previous years.

**** The marine, freshwater and oyster data presented here are for the year 2008 rather than 2009. Release of fisheries landings data by the collecting agencies occurs 4-5 months after the fact. Another reporting system was used in previous years, so this year's data are not directly comparable to that of previous years.**

**** The marine, freshwater and oyster data presented here are for the year 2008 rather than 2009. Release of fisheries landings data by the collecting agencies occurs 4-5 months after the fact. Another reporting system was used in previous years, so this year's data are not directly comparable to that of previous years.**

**** The marine, freshwater and oyster data presented here are for the year 2008 rather than 2009. Release of fisheries landings data by the collecting agencies occurs 4-5 months after the fact. Another reporting system was used in previous years, so this year's data are not directly comparable to that of previous years.**

**** The marine, freshwater and oyster data presented here are for the year 2008 rather than 2009. Release of fisheries landings data by the collecting agencies occurs 4-5 months after the fact. Another reporting system was used in previous years, so this year's data are not directly comparable to that of previous years.**

** The marine, freshwater and oyster data presented here are for the year 2008 rather than 2009. Release of fisheries landings data by the collecting agencies occurs 4-5 months after the fact. Another reporting system was used in previous years, so this year's data are not directly comparable to that of previous years.

PRICES OF COMMODITY PRODUCTS

The gross farm value of the commodities reported in the parish tables was computed based upon estimated annual per-unit prices. The state average prices listed below were used for most parishes for most commodities. However, a parish price was used if the parish price was significantly different from the state price.

PLANT ENTERPRISES COMMODITIES

Commodity	Unit	2009 Price
COTTON		
Lint - Irrigated	lbs.	\$0.59
