

Seed Cotton ARC-CO Payment Matrix for the 2024 Crop Year

Dr. Michael Deliberto

*Louisiana State University Agricultural Center
Department of Agricultural Economics & Agribusiness*

The Agriculture Risk Coverage county option (ARC-CO) makes payments when revenue-which is a factor of both price and yield- falls below a guaranteed revenue level for a parish. The Price Loss Coverage (PLC) provides payments when the prices fall below a covered commodity's reference price. For the purposes of the PLC program in 2024, the effective reference prices for corn, soybeans, and sorghum are above the statutory reference prices for the first time since the escalator price provision- which allows adjustment to the reference price- was established in the 2018 farm bill. This is due to higher MYA prices from 2018 to 2022. Some crops will have higher ARC-CO benchmark revenues in 2024 as well compared to the previous years. Table 1.

Table 1. Effective reference prices and 2024 ARC-CO benchmark prices for the 2024 crop year.

	Corn (\$/bu)	Soybeans (\$/bu)	Sorghum (\$/bu)	Seed Cotton (\$/lb.)	LG Rice (\$/lb.)	Wheat (\$/bu)
Effective Reference Price	\$4.01	\$9.26	\$4.06	\$0.3670	\$0.14	\$5.50
ARC-CO Benchmark Price	\$4.85	\$11.12	\$5.01	\$0.3958	\$0.14	\$6.21

The increased effective reference prices and higher ARC-CO benchmark prices and expectations for lower actual MYA prices over the 2024 marketing year suggest higher likelihoods of triggering program payments from both programs compared to recent years when actual prices have been well above effective reference and benchmark levels. In general, the ARC-CO program for 2024 will tend to provide greater support for situations where yield losses may occur or for more moderate price declines at normal yield levels. The PLC program will tend to provide more moderate support for moderate price decline where accrual yields are at or above trend expectations. Also, PLC will lend more support to situations with more severe price declines.

The decision is situation and grower specific. The 'best' choice will be the program that covers the risk associated with the greatest concern for the individual grower. The LSU AgCenter has developed the *ARC/PLC Program Payment Estimator Tool* that allows growers to compare ARC-CO and PLC payments over a range of price and yield scenarios. This can assist growers in informing their 2024 commodity program choice which needs to be made by March 15, 2024. Pertaining to crop insurance, the Supplemental Coverage Option (SCO) can be purchased on acres that are enrolled in PLC, but not enrolled in ARC. Seed cotton base that is enrolled in ARC or PLC cannot purchase STAX if base acres

on that farm are planted to cotton. A producer's election for ARC or PLC must consider the eligibility, cost, and benefits of other options such as optional insurance endorsements, if applicable.

This report provides an estimated 2024 ARC-CO program payment for seed cotton for selected Louisiana parishes by production practice. Prices and yields are set to vary over multiple scenarios subject to the parish's revenue guarantee for 2024. For price and yield scenarios that result in an ARC-CO payments, the cells are shaded in green.

Tables are contained over the next several pages of this report.

Avoyelles Parish Seed Cotton (all)

The ARC-CO revenue guarantee is \$583.33 per acre for the 2024 crop year. The simple five-year parish average yield is 1,819 SEED COTTON pounds per acre bushels per acre. The maximum ARC-CO payment rate would be capped at \$67.83 per acre.
